

Semcon signs long-term partnership agreement for Technical Documentation with Bombardier

Semcon's Informatic business area has signed a four-year partnership agreement with Bombardier Transportation Sweden AB. The agreement means that Semcon Informatic will be the strategic partner for supplying technical documentation services. The aim is also for Semcon to develop Bombardier's information products and streamline production of technical documentation.

Semcon Informatic is continuing to do business with world-leading companies in the face of international competition.

"Bombardier is a world leader in the manufacture of rail-bound vehicles and transportation systems and is at the forefront in terms of developing advanced and eco-friendly rail technology. We are proud that they chose us as their strategic partner for technical product information," says Joakim Zetterlund, Vice President Semcon Informatic.

"We chose Semcon because of their extensive experience in this field and their ability in developing technical product information for our products," says Roger Knott, Director Project Engineering Bombardier.

Assignments for Bombardier will mainly be carried out by the office in Västerås. There are no volume guarantees, but the estimated value of the deal is expected to be in the region of SEK 10 million a year.
