Exchange Notice**IT 44/10****IT – Provision of INET Off-hours Connectivity****Provision of INET Off-hours Connectivity**

Starting April 23rd Nasdaq OMX Nordic will offer the ability to do afterhours INET connectivity testing in order to mitigate the impact for customers migrating to VFN. All customer TCP based ports will have this associated service setup by default and no action is required on their part. Outlined below are the details for the different afterhours offerings. Please note the service gap between 18:05 and 18:30 for ITCH and OUCH.

FIX / FIX DROP

Availability: 18:05-22:00 CET

Service: The service will be running as normal meaning that customers can logon to their port and see normal FIX messaging. No order manipulation or similar is available as this is afterhours.

Failover: Manual failover for customers requesting it. Please contact Technical Support.

OUCH / OUCH DROP

Availability: 18:30-22:00 CET

Service: A TCP connection can be established in order to verify connectivity. No logon possible, connection will be dropped if customer sends data.

Failover: Connection to both site A and B will be available.

ITCH (unicast)

Availability: 18:30-22:00 CET

Service: A TCP connection can be established in order to verify connectivity. No logon possible, connection will be dropped if customer sends data.

Failover: Connection to both site A and B will be available
