Cybercom behind internationally award-winning product using Bluetooth® wireless technology

Cybercom was chosen as a partner by Nonin Medical for the development of the *Bluetooth* wireless technology solution in Nonin's pulse oximeter, which won the prestigious award "Bluetooth SIG Best of CES 2009" at the Consumer Electronics Show (CES) in Las Vegas.

Nonin Medical, Inc., a leading innovator of physiological monitoring solutions, was awarded the Bluetooth SIG Best of CES 2009 for the Onyx® II, Model 9560 fingertip pulse oximeter. It is the world's first fingertip oximeter that uses *Bluetooth* wireless technology to send the pulse and blood oxygen data monitored by the oximeter to devices such as computers, monitors, and mobile telephones — enabling individuals to accurately monitor vital signs.

Nonin partnered with Cybercom to develop the complete communications module including: electronics and software, production test equipment, production ramp-up, and *Bluetooth* qualification. The communications module is a generic solution that also can be integrated into other Nonin and third party products.

"We are very proud to have won the *Bluetooth SIG Best of CES 2009, vertical category*," says Scott Blomberg, Product Development Manager, Nonin Medical. "We are delighted with Cybercom's contribution — they have valuable expertise in *Bluetooth* wireless technology development, and we have every confidence in them."

"It's fantastic that Nonin's pulse oximeter won at CES," says Kristian Palm, *Bluetooth* Business Manager at Cybercom. "We are very happy for our customer and proud of our contribution. Cybercom has extensive experience in *Bluetooth* wireless technology development and we see Nonin's award as confirmation of our leading expertise in the field."
