Innovative Anoto Digital Pen and Paper Applications to Showcase at AHIMA

Anoto Partners Demonstrate Powerful Healthcare Applications and Share Experience

Boston, MA, October 8, 2007 – Anoto, the inventor of Anoto Digital Pen and Paper technology, will demonstrate several revolutionary Anoto Digital Pen and Paper partner applications at American Health Information Management Association (*AHIMA*) booth 130 on October 8-11.

“The breadth and scope of our partners’ pioneering healthcare applications using our Digital Pen and Paper Technology has been quite successful and is fulfilling a long standing gap in the industry”, says Anders Norling, CEO of the Anoto Group.

Digital Pen Systems, a recent Anoto partner award winner, will present its innovative Anoto Digital Pen and Paper system, and they will explain how proven long-term care quality improvements and streamlined documentation can improve clinical team decision-making. Additionally, Digital Pen Systems will highlight a new and exclusive Anoto Digital Pen and Paper provider contract involving CDW Healthcare, OkiData Printing Solutions, and one of the nation’s largest Group Purchasing Organizations, HealthTrust Purchasing Group.

Targeting the clinical laboratory outreach market, Halfpenny Technologies will demo its RoutePen, the web-based courier management and routing solution that uses Anoto technology. RoutePen’s simplicity of gathering a real-time specimen count and location data, combined with a robust alerting system, enhances a laboratory’s ability to service clients’ specimen pick-up needs and customer service demands.

IS2BE is announcing its clinical Electronic Medical Record solution. It captures charts, patient history and physical examination information and provides transcription and searchable clinical data. The solution works with your current EMR or stands on its own as your EMR solution.

Pearson will exhibit its new Docuscan Patient History and Docuscan Patient Registration systems, highlighting the ease at which they capture patient information digitally and how they can be used by patients in addition to medical staff. These solutions use Pearson’s revolutionary PAROS™ Technology that incorporates Anoto Functionality with Pearson’s proven data capture technologies. Pearson’s Docuscan solutions provide the digital pen and paper conduit into any EMR or Practice

Management system.

Satori Labs, featuring its enterprise forms automation solution called FusionForm®, will display applications currently deployed at major health facilities, oncology centers and national drug testing labs across the country. FusionForm, based on Anoto Digital Pen and Paper, has been adopted by key corporate healthcare customers because of such unique benefits as ease-of-use, productivity gains and instant ROI.
