# **EXECUTIVE STATEMENT**

When 2011 began, we hoped that the financial crisis was receding and that macroeconomic fundamentals would lead to a gradually improving business environment.

As it turned out, 2011 was yet another year of mounting challenges for the financial sector and our customers.

The public budget deficits and weak economies of a number of Western countries caused considerable turbulence in the capital markets, and several euro-zone countries needed massive bailout packages. A number of EU countries announced and implemented fiscal tightening, and growth rates fell in our key markets.

In April 2011, the Group strengthened its capital position markedly through a share offering with pre-emption rights for existing shareholders. The net proceeds amounted to almost DKK 20 billion. With the extra capital, Danske Bank was in a position to repay, as early as in 2012, the hybrid capital raised in 2009 from the Danish state. An agreement with the state on prepayment terms that would be financially satisfactory for Danske Bank could not be reached, however, and we decided not to prepay the loan.

In December, the European Banking Authority (EBA) tested the capital strength of Danske Bank and 70 other European banks. The test assessed the banks' need for recapitalisation. As expected, Danske Bank passed the test with a capital level substantially above the EBA's requirement.

Banks' access to funding suffered from the unrest in the capital markets. Funding costs rose, and issuance opportunities became fewer. These conditions had a pronounced effect in Denmark, as non-viable banks were liquidated under the rules of Bank Package 3, causing losses for senior debt holders. Danske Bank was downgraded twice, mainly because the rating agencies felt that Bank Package 3 implicitly weakened systemic support. The adoption of Bank Package 4 in late summer and the prospect that systemically important financial institutions would be designated in Denmark took some of the pressure off the banks. The market for senior debt generally closed down in mid-2011, while the covered bond market was periodically accessible. Although the difficult funding situation affected the Group, we carried out planned issues successfully.

Earnings, on the other hand, suffered from the economic and capital market woes and were unsatisfactory in view of the Group's business platform and potential. We have therefore launched initiatives to improve earnings and ensure that our business model is competitive and creates value even in times of low economic growth and high capital and funding costs.

Key elements of this work are product repricing and a stronger focus on good, efficient service to selected customer segments through the right channels.

In addition, the Group adopted a new three-year cost-savings programme. It focuses on improving both customer service and operating efficiency. The cost reductions are supported by customers' use of the Group's new self-service products, such as mobile banking, for an increasing number of banking transactions.

These initiatives will gradually reduce the need for staff resources. We expect that a substantial number of reductions can be made without redundancies if staff turnover, including retirements, is unchanged.

Being a universal Nordic bank, the Group remains dedicated to strengthening advisory tools and solutions for large corporate customers in the Nordic region. We also aim to become the market leader in the business segment by virtue of our increasingly advanced product range.

The Group continues to invest heavily in digital product innovation, focusing on usability and increased accessibility, in particular for personal customers. The mobile banking application for smartphones was developed further in 2011, and a tablet banking solution was introduced towards the end of the year. Customers like the products, and these technology initiatives enable us to support the changes in customer behaviour.

We believe that the Group has the right foundation to improve its earnings. The capital and liquidity positions are satisfactory, our technology is market-leading, employee satisfaction is above the sector average, and customer satisfaction is rising. On the basis of our strong market position in the Nordic countries, we will continue to focus on serving existing customers as well as possible.

Our various initiatives are intended to lift the return on equity considerably over a three-year period. Our ambition is gradually to achieve a competitive return that, as a minimum, matches the Group's cost of capital.

Once again in 2011, our staff made a substantial, proficient and invaluable contribution for which we are very grateful.

#### Management changes

After 43 years with the Group – 25 on the Executive Board and 14 as CEO – Peter Straarup is retiring. The Board of Directors has appointed Eivind Kolding as chief executive officer effective 15 February 2012. Peter Straarup will retire at the same time.

Consequently, on 19 December 2011, Eivind Kolding resigned as Chairman of the Board of Directors and from the three board committees on which he served. The former Vice Chairman of the Board of Directors, Ole Andersen, succeeds Eivind Kolding as Chairman. Niels B. Christiansen has been elected Vice Chairman.

Eivind Kolding continues as member of Danske Bank's Board of Directors until he assumes the position of CEO.

Ole Andersen Chairman of the Board of Directors Peter Straarup Chief Executive Officer

Share ratios have been divided by a factor of 1.0807 to reflect the share capital increase in April 2011.
Figures for 2007 include the Sampo Bank group as of February. As of 2008, the total capital and tier 1 capital ratios are calculated in accordance with the Capital Requirements Directive.

### **OVERVIEW**

#### The year 2011

In 2011, the Danske Bank Group posted a pre-tax profit of DKK 4.2 billion. The net profit was DKK 1.7 billion. The result was unsatisfactory and lower than expected because of the considerable financial turbulence and economic downturn in the second half of the year.

- Total income was DKK 43.4 billion, down 6% from the level in 2010.
  - Net interest income largely matched the year-earlier level, but rose in the latter part of the year after the Group raised lending rates.
  - Net trading income was satisfactory in the first half of 2011 but suffered from the global financial turmoil in the second half.
  - The results of the Group's insurance business fell, mainly because the booking of part of the risk allowance to income was postponed and the investment return declined.
- Expenses remained at the year-earlier level.
- Loan impairment charges amounted to DKK 13.2 billion, down 5% from the level in 2010. The Danish activities posted larger-than-expected charges, and the difficult market conditions persisted in Ireland and Northern Ireland.
- In April 2011, the Group strengthened its capital position through a share offering with pre-emption rights for existing shareholders. The net proceeds were DKK 19.8 billion. The issue lifted the Group's core tier 1 capital ratio by about 2.2 percentage points [calculated at 31 December 2011].
  - Danske Bank and the Danish government could not agree on terms for a prepayment of the state hybrid capital that were financially acceptable to Danske Bank. Under the loan agreement, the loan can thus be repaid in 2014 at the earliest.
- At 31 December 2011, the tier 1 capital and total capital ratios were solid at 16.0% and 17.9%, respectively, against 14.8% and 17.7% at the end of 2010. The core tier 1 capital ratio was 11.8%, against 10.1% at the end of 2010.
  - At the end of the year, risk-weighted assets amounted to DKK 906 billion, against DKK 844 billion at 31 December 2010, with the increase owing partly to a recalibration of the Group's risk models.
- In 2011, the Group issued covered bonds and senior debt for a total of DKK 59.1 billion.
  - In the second half of the year, banks' access to long-term funding generally became extremely limited. Nonetheless, the Group successfully carried out issues planned for 2011.
- The Group has launched initiatives to improve earnings and ensure that its business model is competitive and creates value.
- The Board of Directors is recommending that no dividend be paid for 2011.

#### Fourth quarter 2011

The Group posted a pre-tax profit of DKK 0.6 billion in the fourth quarter of 2011. Another quarterly rise in net interest income and rising net trading and insurance business income more than offset higher impairment charges.

- Higher lending rates drove the positive trend in net interest income.
- Loan impairment charges rose to DKK 4.8 billion mainly because of adverse trends in agriculture and shipping.

#### Outlook for 2012

The uncertainty in the global credit markets is likely to continue, and government budgets will generally be tightened. The potential for economic growth therefore appears limited, and the Group expects very low growth rates in Europe in 2012.

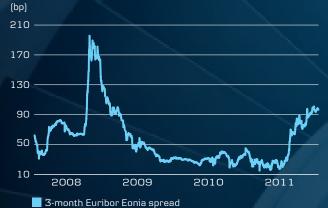

- Earnings before impairment charges at the banking units and Danske Capital are likely to remain stable, while earnings at other units will depend on international market trends, especially in Europe.
- The Group will focus heavily on cost control and measures to improve earnings.
- The trend in customer credit quality will depend on the economic climate in the Group's markets, and total impairment charges are likely to remain high in 2012.
- The Group expects earnings to remain low in 2012.

# FINANCIAL REVIEW

In 2011, the Danske Bank Group posted a pre-tax profit of DKK 4.2 billion. The net profit was DKK 1.7 billion. The result was unsatisfactory and lower than expected because of the considerable financial turbulence and economic downturn in the second half of the year.

Group's markets in the first half of 2011. Conditions became more difficult over the second half of the year, however, when financial and economic uncertainty increased greatly. The mounting global financial unrest left its mark on the Group's banking activities in the form of rising funding costs and a squeeze on margins.

Economic conditions improved in most of the

Interest rates remained low throughout 2011. The economic crisis prompted the European Central Bank to cut interest rates in November and again in December. These rate cuts offset the hikes made in the first half of the year.

The Danish central bank followed suit but also lowered deposit rates independently. The adjustments brought leading rates down to a record low by the end of 2011.

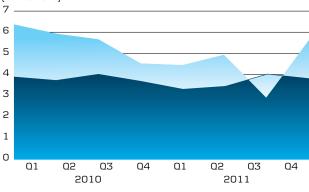

The European debt crisis and the resulting focus on banks' credit exposure and funding needs increasingly troubled the capital markets. After the summer of 2011, money market spreads widened

considerably, although not nearly as much as during the 2008 crisis.

The intense unrest led to a generally more difficult business environment, and this affected the Group's net trading income and Danica Pension's performance in particular in the second half of the year.

Banking Activities and Danske Capital both delivered stable results in 2011.

# PROFIT BEFORE LOAN IMPAIRMENT CHARGES (DKK billions)

- Profit before loan impairment charges at Danske Markets and Treasury, Danica Pension and Other Activities
- Profit before loan impairment charges at Danske Capital and Banking Activities, excluding state guarantee commission and goodwill

Banking Activities posted an 8% rise in profit before loan impairment charges. Loan impairment charges declined only marginally from the level in 2010, with larger-than-expected charges in Denmark. The Irish and Northern Ireland banking units recorded large loan impairment charges, and both units posted losses.

At DKK 0.9 billion, Danske Capital's earnings improved 11% over the 2010 level. The rise was driven by higher assets under management and improved margins.

Danske Markets and Treasury achieved a profit before impairment charges of DKK 3.1 billion, against DKK 4.0 billion in 2010, mainly because of satisfactory income in the first half of the year. Income at Danica Pension fell from DKK 2.1 billion in 2010 to DKK 0.6 billion as booking of part of the risk allowance to income was postponed and the investment return declined.

Other Activities posted a loss because of the commitment of an estimated DKK 0.7 billion to the Danish Guarantee Fund for Depositors and Investors to cover losses on distressed banks.

#### Profitability

The Group has launched initiatives to improve earnings and ensure that its business model creates value even in times of low economic growth. One key measure is wider lending margins to compensate for rising capital and funding costs. The prices of many products and services have already been adjusted, and more changes are underway. The initiatives announced and implemented are expected to add more than DKK 2.5 billion to income in 2012.

In the fourth quarter of 2011, the Group launched a three-year cost-savings programme to reduce underlying costs by at least 10%, or some DKK 2 billion, from 2012 to 2014.

Focus will be on improving and automating customer service and streamlining operations.

Since 2008, the Group has cut costs in a number of areas, reducing the headcount by about 2,000 employees and the number of branches by about 160. These changes are a natural consequence of customers' use of eBanking, mobile banking and the 24/7 Contact Centre for an increasing number of banking transactions. The trend is likely to continue, and the changing customer behaviour contributes significantly to cost savings.

These developments gradually reduce the need for staff resources. The cost-savings programme therefore includes a headcount reduction of about 2,000 over the 2012-2014 period. The Group expects that a substantial number of the reductions can be made without redundancies if staff turnover, including retirements, remains at the usual level.

#### Income

Total income was DKK 43.4 billion, down 6% from the level in 2010, mainly because of lower income from the insurance business.

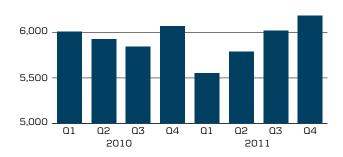

Net interest income amounted to DKK 23.5 billion, largely matching the year-earlier level. The early months of 2011 saw low money market rates, but rates rose later in the first half of the year, and this led to wider deposit margins. The raising of lending rates in the summer had a further positive effect on net interest income in the second half of the year. The initiatives implemented since mid-year improved income in 2011 by about DKK 0.5 billion. The falling market rates reduced the effect of the higher lending rates in the second half of 2011.

The allocation of internal funding costs for lending and deposit activities was changed at 1 January 2011 to better reflect the rise in funding costs and the duration of loans and deposits. This reduced net interest income by about DKK 250 million and lifted net trading income at Group Treasury by the same amount.

#### NET INTEREST INCOME

(DKK millions)

6,500

Net fee income fell 5% from the year-earlier level, mainly because of the DKK 281 million commission paid to the Danish state for guaranteed bond issues.

Net trading income amounted to DKK 7.3 billion, down 5% from the 2010 level. Income was satisfactory in the first half of 2011 but suffered from the global financial turmoil in the third quarter. Market conditions caused widespread risk aversion among financial players. The turmoil led to lower interest rates, higher volatility and less liquidity on the interbank markets. Market conditions, especially in the derivatives and credit markets, improved in the fourth quarter, however. Income from customer-driven activity also improved.

Other income fell 6% from the year-earlier level because of lower one-off income.

The insurance business showed a profit of DKK 0.6 billion, down DKK 1.6 billion. Profit declined because the booking of DKK 1.1 billion of the risk allowance to income was postponed and the investment return fell. The extraordinary market conditions in the fourth quarter prompted the Danish FSA to allow an adjustment of the discount yield curve. Consequently, one element may now be calculated as a 12-month moving

average. Danica Pension used the new discount yield curve in its calculation of life insurance provisions, and the effect was a reduction of provisions of DKK 2.8 billion at 31 December 2011. Under current rules and if the yield differential between Danish and German government bonds remains close to zero or becomes negative over the next year, this will result in a negative profit contribution in 2012.

The shadow account balance was DKK 1.2 billion. It may be booked to income at a later date when the technical basis permits.

#### Expenses

Expenses amounted to DKK 26.0 billion, the same level as in 2010. Underlying costs rose 4% during the period mainly because of higher IT development and marketing costs and general wage and price increases.

EXPENSES [DKK billions]	2011	2010
Expenses	26.0	26.0
Commission (Bank Package 1)	-	1.9
The Danish Guarantee Fund	0.7	-
Performance-based compensation	0.6	0.6
Severance payments	0.6	0.2
Depreciation and amortisation	3.5	3.4
Underlying costs	20.6	19.9
Cost/income ratio (%)	59.9	56.2
Underlying costs/income ratio [%]	47.6	43.1

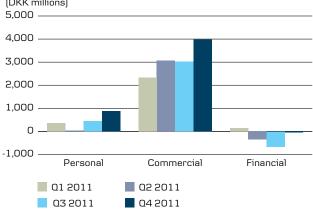

The resolution of Amagerbanken A/S, Fjordbank Mors A/S and Max Bank A/S resulted in a commitment to the Danish Guarantee Fund for Depositors and Investors of an estimated DKK 0.7 billion in 2011.

#### Loan impairment charges

Loan impairment charges amounted to DKK 13.2 billion in 2011, against DKK 13.8 billion in 2010. The charges related mainly to the commercial property segments in Ireland and Northern Ireland and to the agricultural, commercial property and personal customer segments in Denmark.

Total impairment charges for the year were high mainly because of large increases in the fourth quarter at Retail Banking Denmark and Corporate & Institutional Banking.

# LOAN IMPAIRMENT CHARGES IN 2011 (DKK millions)

Charges equalled 0.7% of lending and guarantees, the same as in 2010. Individual charges amounted to a net DKK 13.8 billion, and collective charges saw a net reversal of DKK 0.6 billion. Individual charges covered new and increased charges etc. charged directly to the income statement of DKK 20.7 billion and reversals and amounts received on claims previously written off totalling DKK 6.9 billion. Charges against facilities that are being repaid accounted for 44% of the new and increased individual charges.

Total charges consisted of charges against facilities to personal customers of DKK 1.7 billion, charges against facilities to commercial customers of DKK 12.4 billion – with small and medium-sized enterprises accounting for DKK 9.4 billion – and charges against facilities to financial counterparties, which saw a net reversal of DKK 0.9 billion.

LOAN IMPAIRMENT CHARGES		
(DKK millions)	2011	2010
Retail Banking Denmark	4,316	7,649
Retail Banking Finland	187	91
Retail Banking Sweden	202	114
Retail Banking Norway	380	94
Banking Activities Northern Ireland	2,178	1,247
Banking Activities Ireland	6,334	4,969
Banking Activities Baltics	-255	207
Other Banking Activities	155	25
Corporate & Institutional Banking	744	25
Total Banking Activities	14,241	14,421
Danske Markets and Treasury	-1,033	-617
Danske Capital	-23	13
Total	13,185	13,817

#### Denmark

Charges at Retail Banking Denmark totalled DKK 4.3 billion, with charges against facilities to the agricultural, commercial property and personal customer segments accounting for the majority. Charges recognised by Realkredit Danmark accounted for DKK 1.1 billion. Charges at Retail Banking Denmark reflected a compensation of DKK 0.8 billion for the termination of a credit default swap covering potential losses on mortgage lending.

#### Realkredit Danmark

Realkredit Danmark posted charges against personal property loans of DKK 0.5 billion and

charges against loans for other property types of DKK 0.6 billion. Charges equalled 0.2% of lending and guarantees.

#### Retail Banking Denmark (excl. Realkredit Danmark)

At Retail Banking Denmark, excluding Realkredit Danmark, charges for the period related mainly to the agricultural and commercial property segments.

The housing market was subdued, and prices fell throughout the year. The Group therefore expects an increasing number of personal customers to suffer losses on the sale of their homes. Customers are also more sensitive to changes in their personal finances. Loan impairment charges relating to the personal customer segment totalled DKK 0.6 billion in 2011.

Market conditions for the agricultural segment remained challenging. Pig farmers in particular were hit by high feedstuff prices. The last part of 2011 saw an improvement, however, as pork prices rallied and feedstuff prices fell. At the end of the year, accumulated individual impairment charges against facilities to agricultural customers amounted to DKK 2.0 billion, with pig farmers accounting for DKK 1.0 billion. The Group also recognised collective charges of DKK 0.3 billion against facilities to agricultural customers. Credit exposure to agricultural customers, mainly operating facilities, totalled DKK 8.6 billion at Retail Banking Denmark, excluding Realkredit Danmark.

The residential and commercial rental property markets saw higher vacancy rates, and the persistent slump in consumer spending hit retail rentals hard. Charges relating to the commercial property segment amounted to DKK 0.7 billion in 2011.

#### Ireland

Loan impairment charges at Banking Activities Ireland amounted to DKK 6.3 billion and related mainly to the commercial property segment.

Conditions in the commercial property market remained poor. Within the investment property segment, rents declined and vacancy rates rose. Also, the rate of return required by investors rose, depressing collateral values. Accumulated charges totalled DKK 13.8 billion, or 21% of the exposure. Accumulated charges against facilities to the commercial property and construction segments amounted to DKK 9.6 billion, or 41% of the exposure. With a total of DKK 3.0 billion, or 46% of the exposure, the property development segment occasioned the largest accumulated charges.

The economic situation in Ireland is affecting Irish households to an increasing degree, and impairment charges against facilities to personal customers made in 2011 amounted to DKK 0.6 billion. Accumulated charges amounted to DKK 1.9 billion at the end of the year.

Accumulated charges against facilities to other business segments totalled DKK 2.3 billion, or 14% of the exposure.

#### Northern Ireland

Loan impairment charges at Banking Activities Northern Ireland amounted to DKK 2.2 billion and related mainly to the commercial property segment. Charges declined somewhat from the third to the fourth quarter.

Charges remained high, though, primarily because commercial property prices fell. The property development segment saw the highest percentage of charges, mainly because of lower residential construction activity.

Accumulated charges totalled DKK 5.1 billion, or 9% of the exposure. Accumulated charges relating to the commercial property and construction segments amounted to DKK 4.2 billion of this amount, or 29% of the exposure. The property development segment posted accumulated charges of DKK 1.9 billion, or 51% of the exposure.

Accumulated charges against facilities to other business segments, including agriculture, and the personal customer segment were low.

#### Corporate & Institutional Banking

Loan impairment charges at Corporate & Institutional Banking amounted to DKK 0.7 billion, against DKK 25 million in 2010. The increase related to charges against facilities to a small number of customers. Adverse developments in the shipping industry were the main cause, with this industry accounting for 79% of charges in 2011 and 18% of the exposure.

Underlying credit quality at Corporate & Institutional Banking remained good. Charges equalled 0.6% of lending and guarantees.

#### Other units

At the units in Norway and Sweden, a few large customers accounted for most of the impairment charges. In Finland and the Baltic countries, charges were low, generally lower than the average expected for a business cycle. Charges equalled 0.1% of lending and guarantees at these units.

Loan impairment charges at Danske Markets benefited from reversals of previously recognised charges, for example charges against the exposure to Lehman Brothers.

#### Tax

Tax on the profit for the year, including adjustments of prior-year tax charges, amounted to DKK 2.5 billion. The tax charge is high relative to the profit for the year, mainly because the Group did not book the tax value of losses in Ireland. The tax value of losses is booked and capitalised only if it is likely that, in the future, the Group will book taxable income that can absorb any tax-loss carryforwards.

#### Fourth quarter 2011

The Group posted a pre-tax profit of DKK 0.6 billion, against DKK 10 million in the third quarter. Another quarterly rise in net interest income and rising net trading and insurance income more than offset higher impairment charges.

Net interest income rose 3% above the level in the third quarter. As expected, higher lending rates at Retail Banking Denmark added DKK 0.2 billion to income.

Net trading income amounted to DKK 1.6 billion, against DKK 0.3 billion in the third quarter. The global financial turbulence continued into the fourth quarter and led to widespread risk aversion among financial players, further rate cuts, continued volatility and poor liquidity in the interbank markets. Net trading income rose mainly because of better conditions in the derivatives and credit markets in December 2011. Income from customer-driven activity remained high.

The Group's insurance business posted a profit of DKK 1.0 billion, against a loss of DKK 0.7 billion in the third quarter, as the need to strengthen technical provisions declined.

Expenses amounted to DKK 6.5 billion, rising 17% over expenses in the third quarter, which benefited from lower holiday pay expenses and lower marketing costs. Provisions for severance pay and costs relating to the adjustment of distribution channels contributed DKK 0.3 billion to the rise in the fourth quarter.

Loan impairment charges amounted to DKK 4.8 billion, a rise of 2.0 billion over the level in the third quarter. Considerably higher charges at Retail Banking Denmark and Corporate & Institutional Banking, caused by adverse trends in agriculture and shipping, were the main reasons for the high level of charges. Impairment charges remained high at the units in Northern Ireland and Ireland, although charges fell from the third-quarter level at Northern Bank.

Lending as % of deposits and bonds issued by Realkredit Danmark	111	110		111	112	112	112

#### Lending

Total lending to personal customers largely matched the level at the end of 2010, while lending to business customers rose.

In the fourth quarter, lending at Retail Banking Denmark was up DKK 4.0 billion from the third-quarter level, mainly because of market value adjustments of mortgage loans.

In Denmark, new lending, excluding repo loans, amounted to DKK 48.4 billion. This amount included lending to personal customers of DKK 22.2 billion. Net new mortgage lending accounted for DKK 6.8 billion of new lending to personal customers.

Lending equalled 111% of the total amount of deposits and bonds issued by Realkredit Danmark, against 110% at the end of 2010.

#### Deposits and bonds issued by Realkredit Danmark

Total deposits from personal customers largely matched the level at 31 December 2010, while deposits from business customers edged down.

Deposits at Retail Banking Denmark fell 2% from the level at the end of 2010. Excluding exchange rate effects, total deposits at the units outside Denmark rose 3% over the level at the end of 2010.

The total value of mortgage bonds issued to fund loans provided by Realkredit Danmark, including the Group's own holdings, was DKK 729 billion and matched the year-earlier level.

#### Credit exposure

At 31 December 2011, total credit exposure amounted to DKK 3,611 billion, against DKK 3,402 billion at the end of 2010. Some DKK 2,299 billion derived from Danish and international lending

activities, and DKK 1,020 billion from trading and investment activities.

#### Credit exposure from lending activities

Total credit exposure from lending activities includes amounts due from credit institutions and central banks, guarantees and irrevocable loan commitments. The exposure is measured net of accumulated impairment charges and includes repo loans.

Personal customers accounted for 39% of credit exposure from lending activities, commercial customers for 39%, and financial counterparties for 17%. The remainder was exposure to central banks and central and local governments. Of the exposure to commercial customers, small and medium-sized enterprises accounted for 68%.

CREDIT EXPOSURE FROM LENDING ACTIVITIES [DKK millions]	31 Dec. 2011	Share of total (%)	31 Dec. 2010	Share of total (%)
Retail Banking Denmark	976,962	43	973,075	41
Retail Banking Finland	158,008	7	146,697	6
Retail Banking Sweden	203,319	9	198,334	8

Danske Capital	9,965	-	10,057	-
Total	2,298,711	100	2,363,456	100

#### Personal customers

Credit exposure to personal customers covers loans secured on the customers' assets, consumer loans and fully or partially secured credits.

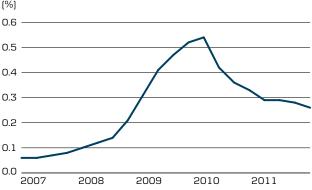

At 31 December 2011, credit exposure to personal customers amounted to DKK 889 billion. Home financing accounted for DKK 775 billion, and Realkredit Danmark loans accounted for DKK 421 billion of that amount. Most of the home loans were variable-rate loans.

LOAN-TO-VALUE RATIO, HOME LOANS [%]	31 Dec. 2011	31 Dec. 2010
Retail Banking Denmark	69.5	66.9
Realkredit Danmark	67.7	65.6
Retail Banking Finland	62.5	62.4
Retail Banking Sweden	70.3	68.9
Retail Banking Norway	63.6	62.8
Banking Activities Northern Ireland	78.0	72.4
Banking Activities Ireland	118.9	83.7
Banking Activities Baltics	84.1	96.2
Average	69.9	67.3

As a result of lower property values, loan-to-value (LTV) ratios rose. Moreover, the Group adjusted the price indices used to value residential property, and this adjustment had an adverse effect in particular at Banking Activities Ireland.

In the second half of 2011, the credit quality of the personal customer portfolio in Denmark deteriorated. The fall in house prices meant that an increasing number of personal customers could suffer losses on the sale of their homes. However, the relatively low unemployment rate meant that customers were not forced to sell and take the resulting losses. Because of the low level of interest rates, Realkredit Danmark saw a slight fall in delinquency rates.

At the other Nordic retail banking units, credit quality remained stable at the end-2010 level.

At the unit in Ireland, credit quality suffered because of high unemployment and a continued decline in disposable income. Delinquency rates rose but remained below the market average.

Loan demand from new personal customers was unchanged from the level in 2010. At 93%, the percentage of personal customer loan applications that were approved was on a par with the 2010 level. The percentage of new customers who applied for loans also matched the 2010 level.

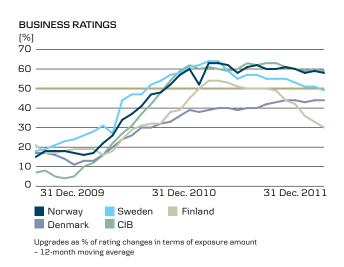

Accumulated impairment charges against personal customer facilities accounted for 18% of total charges and equalled 1% of lending and guarantees to personal customers.

#### **Business customers**

Credit exposure to business customers relates to fully or partly secured operating finance and loans secured on assets.

At the end of 2011, credit exposure to business customers amounted to DKK 899 billion.

Business customer credit quality was largely unchanged, and customers in Ireland and Northern Ireland continued to face difficulties. In Denmark, lower credit quality among small and medium-sized enterprises affected overall credit quality.

The number of business customer upgrades has risen continuously since 2009. At the end of 2011, downgrades still exceeded upgrades at Retail Banking Denmark, while Retail Banking Norway and Corporate & Institutional Banking had considerably more upgrades than downgrades.

The Group's recent general recalibration of its rating models affected business ratings, especially in Finland.

At 31 December 2011, credit exposure from property loans amounted to DKK 257 billion. At Retail Banking Denmark, the credit quality of property exposures was adversely affected by higher vacancy rates for residential and commercial property.

At 31 December 2011, exposure to the Irish and Northern Ireland property sectors amounted to

DKK 11.4 billion and DKK 7.7 billion, respectively. Property developers in Ireland accounted for DKK 3.5 billion [7% of total exposure in Ireland]. In Northern Ireland, the comparable figure was DKK 1.8 billion [3% of total exposure in Northern Ireland].

The property sectors in Ireland and Northern Ireland continued to suffer from falling property prices. Property developers in particular struggled with lower property values. The drop in rents and the rise in vacancy rates squeezed earnings on rental property, which in turn reduced credit quality.

Among small and medium-sized Danish enterprises, agricultural customers in particular had low credit quality because of modest earnings, high gearing and falling property prices. Pork prices rose in the last part of 2011, and, although they declined, sales prices of the most important other agricultural produce remained high. For the year as a whole, the credit quality of the agricultural portfolio deteriorated.

The EU is reviewing agricultural subsidies. Over the long term, this may increase risks, particularly on the weakest agricultural exposures. At the end of 2011, credit exposure to agricultural customers amounted to DKK 67.9 billion, with DKK 45.0 billion deriving from loans provided by Realkredit Danmark. The average LTV ratio for agricultural properties mortgaged to Realkredit Danmark was 74%, against 73% at the end of 2010.

The shipping industry was under pressure at the end of 2011. The negative trend was not limited to isolated segments but covered the entire industry. Excess capacity and low freight rates reduced both collateral values and liquidity. This put the highly leveraged companies in the industry in jeopardy. Also in 2012, demand for transport is forecast

to grow less than supply, and small companies in particular are at risk. Credit exposure to the shipping industry amounted to DKK 48.4 billion, against DKK 50.9 billion at the end of 2010.

Accumulated impairment charges against business customer facilities accounted for 73% of total charges and equalled 4% of lending and guarantees to business customers.

#### Financial counterparties

Credit exposure to financial counterparties amounted to DKK 389 billion at the end of 2011, against DKK 442 billion a year earlier. Most of it was bank facilities with high-quality collateral, mainly repo transactions. The credit quality of financial counterparties remained good.

In recent years, the Group has actively reduced its exposure to financial counterparties.

Exposure to small Danish credit institutions was limited. Exposure to small and medium-sized Danish banks (groups 2-4 as defined by the Danish central bank) amounted to DKK 3.2 billion at the end of the year.

Accumulated impairment charges against facilities to financial counterparties accounted for 8% of total charges.

Risk Management 2011, which is available at www.danskebank.com/ir, provides more details on the Group's credit risks.

#### Allowance account

The allowance account holds accumulated loan impairment charges. At the end of 2011, charges stood at DKK 48.6 billion, against DKK 43.8 billion a year earlier. Collective charges accounted for DKK 4.1 billion.

ALLOWANCE ACCOUNT [DKK millions]	31 Dec. 2011	31 Dec. 2010
Retail Banking Denmark	18,180	19,089
Retail Banking Finland	1,974	2,036
Retail Banking Sweden	1,226	1,193
Retail Banking Norway	1,474	1,469
Banking Activities Northern Ireland	5,083	3,078
Banking Activities Ireland	13,820	9,564
Banking Activities Baltics	2,244	2,892
Other Banking Activities	381	348
Corporate & Institutional Banking	1,455	935
Danske Markets and Treasury	2,599	2,954
Danske Capital	168	211
Total	48,604	43,769
-		

Small and medium-sized enterprises accounted for most of the accumulated charges at Retail Banking Denmark. Most of Banking Activities Ireland's allowance account balance related to the property sector, while the allowance account balance for Corporate & Institutional Banking related to the shipping industry.

Rating categories 11 and 10 comprise individually impaired exposures.

EXPOSURE AT 31 DECEMBER 2011 [DKK billions]	Rating o	ategory 10
Credit exposure before impairment charges	66.6	46.7
Accumulated impairment charges	33.4	11.1
Credit exposure	33.2	35.6
Collateral value	27.8	21.5
Total unsecured exposure	5.4	14.1
Covered by impairment charges and		
collateral (%)	91.9	69.8

Rating category 11 contains exposures to customers that, according to the Group's definition, are in default. These customers are subject to debt collection, restructuring or bankruptcy, or have one or more facilities on which a payment is more than 90 days past due. If a customer defaults on just a single facility, the customer's downgrade to category 11 applies to the entire exposure. Downgrading takes place even if the exposure is fully secured.

Rating category 10 contains customers with impaired exposures that are not in default. Other evidence of financial difficulty exists for these customers, however, such as a need for financial restructuring in the future. Most of these customers continue to service their loans in a timely manner. Downgrading takes place even if the exposure is fully secured.

The exposure to customers in category 10 totalled DKK 35.6 billion, against DKK 34.0 billion at the end of 2010.

Actual losses amounted to DKK 11.2 billion, against DKK 8.9 billion in 2010. The figure includes the settlement of DKK 3.3 billion for the Group's commitment under Bank Package 1. Of actual losses in 2011, DKK 1.0 billion was attributable to facilities not previously subject to impairment, against DKK 0.9 billion 2010.

#### Trading and investment activities

Credit exposure from trading and investment activities rose from DKK 761 billion at 31 December 2010 to DKK 1,020 billion at the end of 2011.

The rise came mainly from an increase in the value of derivatives as lower market rates led to higher fair values of conventional interest rate contracts.

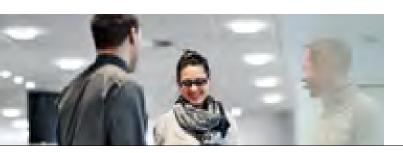

The Group has made agreements with many of its counterparties to net positive and negative market values. The net exposure was DKK 99 billion, against DKK 75 billion in 2010, and most of it was secured by collateral management agreements.

The value of the bond portfolio was DKK 464.6 billion, with DKK 70.5 billion recognised at fair value according to the rules on available-for-sale financial assets. Of the total bond portfolio, 97.6% was recognised at fair value and 2.4% at amortised cost. The Group has not reclassified bonds since 2008.

Most of the bond portfolio is liquid and can be used as collateral for loans from central banks and thus forms part of the liquidity reserve.

BOND PORTFOLIO [%]	31 Dec. 2011	31 Dec. 2010
Government bonds and bonds guaranteed by central or local governments	28	29
Bonds issued by quasi-government institutions	2	2
Danish mortgage bonds	46	45
Swedish covered bonds	14	13
Other covered bonds	5	5
Short-dated bonds (CP etc.), primarily with banks	2	2
Corporate bonds	3	4
Total holdings	100	100
Available-for-sale bonds included in total holdings	15	21

Holdings of government bonds consisted primarily of bonds issued by the Nordic countries, Germany and the UK. The net government bond exposure to Ireland, Portugal, Spain and Italy was DKK 2.5 billion. All holdings of government bonds issued by Ireland, Portugal, Spain and Italy were recognised at market value. The bond portfolio did not include government bonds issued by Greece.

#### Capital and solvency

In April 2011, the Group raised new share capital through a rights issue. The gross proceeds were DKK 20.0 billion, and the net proceeds DKK 19.8 billion. The issue lifted the Group's core tier 1 capital ratio by about 2.2 percentage points (calculated at 31 December 2011).

At the end of 2011, the total capital ratio was 17.9%, with 16.0 percentage points deriving from tier 1 capital. Subordinated loan capital raised from the Danish state accounted for 2.9 percentage points of the total capital and tier 1 capital ratios. At 31 December 2010, the total capital ratio was 17.7%, and the tier 1 capital ratio was 14.8%.

#### Liquidity and funding

The Group maintained a strong liquidity position throughout the year. Consequently, the Group can continue operations even if access to the capital markets is cut off for much more than 12 months, as shown in Moody's liquidity curve. The Group uses this curve as one element of its liquidity management. The Group's 12-month liquidity curve is positive for more than two and a half years.

In 2011, the Group issued covered bonds for an amount of DKK 37.8 billion, and there is still unexploited potential in loans that can serve as collateral for covered bonds.

In addition, the Group issued senior debt for DKK 21.3 billion in 2011. A large portion of this debt was issued in April, when notes worth USD 1.9 billion, or DKK 9.8 billion, were issued under the US note programme.

On 16 June 2009, Danske Bank entered into an agreement on state-guaranteed bond issues with maturities of up to three years (Bank Package 2). At the end of 2011, Danske Bank had issued stateguaranteed bonds in the amount of DKK 36.4 billion maturing in 2012. The amount required to redeem the bonds is included in the liquidity reserve.

#### Ratings

In 2011, Standard & Poor's maintained its rating of Danske Bank at A. In the first half of the year, Moody's downgraded Danske Bank from Aa3 to A2, and Fitch Ratings downgraded Danske Bank from A+ to A in December. This downgrade brought Fitch's rating in line with those of the other rating agencies.

At the end of December 2011, the rating agencies maintained a negative outlook on Danske Bank.

In November 2011, Standard & Poor's reaffirmed its A rating of Danica Pension (with a negative outlook). After the repayment of the subordinated loan in October 2011, Danica Pension decided not to maintain a rating.

In order to assign top ratings to mortgage bonds, the rating agencies have required overcollateralisation above the statutory requirements for supplementary collateral.

In June 2011, Realkredit Danmark terminated its collaboration with Moody's. The reason was disagreement over the fundamentals of the model used by Moody's for rating Danish mortgage bonds. In Realkredit Danmark's opinion, the overcollateralisation requirement was unnecessarily high.

Mortgage bonds and mortgage-covered bonds issued by Realkredit Danmark are rated AAA by Standard & Poor's.

#### Executive management

Peter Straarup, Chairman of the Executive Board, reached the age of 60 in 2011 and wishes to retire in accordance with the terms of his employment contract. The Board of Directors has appointed Eivind Kolding as chief executive officer effective 15 February 2012. Peter Straarup will retire at the same time.

On 19 December 2011, Eivind Kolding resigned as Chairman of the Board of Directors and from the three board committees on which he served. He continues as member of Danske Bank's Board of Directors until he assumes the position of Chief Executive Officer. The former Vice Chairman of the Board of Directors, Ole Andersen, succeeds Eivind Kolding as Chairman. Niels B. Christiansen has been elected Vice Chairman.

Per Skovhus, member of the Executive Board, wishes to resign for personal reasons and will leave the Executive Board no later than 1 July 2012.

FINANCIAL REVIEW

#### Outlook for 2012

The recovery that began in the first half of 2011 was followed by increasing concerns and unrest in the financial markets in the second half of the year. The European debt crisis that started in southern Europe escalated and affected the other EU countries. Doubts about how the US would cope with its massive budget deficit also put a damper on global economic growth. The uncertainty is likely to continue in 2012, and the foundation for economic growth appears weak. The economic situation remains unstable.

Interest rates are expected to be largely unchanged or lower.

In the second half of 2011, Danske Bank twice raised lending rates in Denmark by up to 0.5 of a percentage point to cover higher expenses for the resolution of distressed Danish banks and higher funding costs. A further increase in lending rates of up to 0.5 of a percentage point took effect on 3 February 2012.

Stricter requirements for supplementary collateral for mortgage-covered bonds caused funding costs to rise and necessitated higher administration margins. Realkredit Danmark thus raised margins on 1 January 2012.

Most of the units outside Denmark also raised lending rates.

The Group will continue its efforts to strengthen income, and further price increases are likely. The announced and implemented initiatives are expected to improve income by more than DKK 2.5 billion a year over the level in 2011. Lower key interest rates will curb the effect of price increases, however. Overall, net interest income is likely to increase from the 2011 level.

Streamlining the customer-facing organisation and general process improvements will reduce underlying expenses by at least 10% from 2012 to 2014. Expenses are expected to be at the same level in 2012 as in 2011.

The performance of market-related activities – in Danske Markets, Danske Capital and Danica Pension – will depend greatly on trends in the financial markets. Because of the trend in securities prices in 2011, the Group is unlikely to be able to book the full risk allowance in 2012, and the discount yield curve used in 2011 may later cause the profit contribution to be negative. The shadow account balance was DKK 1.2 billion. It may be booked to income at a later date when the technical basis permits.

The Irish economy will continue to face structural challenges, and because of the economic climate, the level of future impairment charges is uncertain. The situation for rental property and property developers in Northern Ireland is also uncertain. Loan impairment charges at the units in Ireland and Northern Ireland are likely to remain high, at least in the coming quarters.

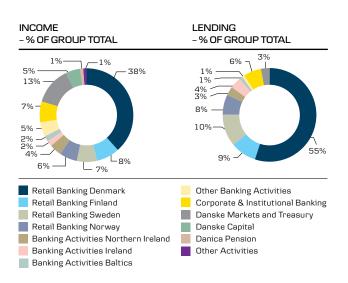

The trend in credit quality will generally depend on the economic climate in the Group's markets. The Group believes that total impairment charges will remain high.

Combined with the outlook for modest economic growth, the Group's solid funding position means that there will be a limited need for new issues in 2012.

The Group expects earnings to remain low in 2012, but because of the economic climate, the estimate is subject to considerable uncertainty.

The Danske Bank Group is the leading financial services provider in Denmark and one of the largest in the Nordic region. The Group offers customers a wide range of services in the fields of banking, mortgage finance, insurance, real-estate brokerage, asset management and trading in fixed income products, foreign exchange and equities.

Danske Bank is an international retail bank operating in 15 countries, with emphasis on the Nordic region. As a universal Nordic bank, the Group is market leader in Denmark, among the largest banks in Northern Ireland and Finland, and a market challenger in Sweden, Norway, Ireland and the Baltic countries.

The Group consists of a number of business units and support functions. The business units are segmented according to statutory framework and product and service characteristics.

Note 2 provides more detailed descriptions of the business units.

- LENDING AND DEPOSITS ROSE SLIGHTLY ABOVE THE LEVEL IN 2010

#### Market conditions

The very low interest rates in the Group's markets in 2011 affected the performance of its banking units. The central banks in the individual countries pursued diverse monetary policies to support their economies. After rate hikes in the first half of the year, the escalating European debt crisis prompted

the ECB to make rate cuts in November and December.

The Danish central bank followed suit but also lowered the deposit rate independently on four occasions in the autumn, partly to stabilise the Danish krone. The last of these adjustments brought the rate down to a record-low 0.30%. Consequently, Retail Banking Denmark also reduced rates on products linked to the deposit rate. In contrast, it raised interest rates on selected loan products more than once to offset increases in funding costs.

In Sweden, reporates rose throughout the year, but the Swedish central bank announced a rate cut at the end of 2011. The higher rates generally lifted income at Retail Banking Sweden. The unit also raised lending rates and repriced products

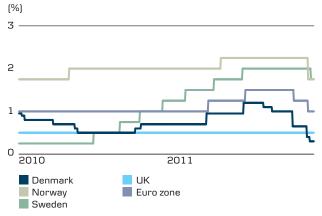

BANKING ACTIVITIES CATERS TO ALL TYPES OF PERSONAL AND BUSINESS CUSTOMERS. THE FINANCE CENTRES SERVE LARGE BUSINESS AND PRIVATE BANKING CUSTOMERS. MORTGAGE FINANCE OPERATIONS IN DENMARK ARE CARRIED OUT THROUGH REALKREDIT DANMARK. REAL-ESTATE AGENCY OPERATIONS ARE CONDUCTED BY THE HOME, SKANDIA MÄKLARNA AND FOKUS KROGSVEEN REAL-ESTATE AGENCY CHAINS. ALL PROPERTY FINANCE OPERATIONS ARE PART OF BANKING ACTIVITIES.

for selected customer segments to offset higher funding costs and improve income.

In Norway, the leading central bank rate was generally higher than in the other Nordic countries. Retail Banking Norway raised selected lending rates in late 2011 as part of a general repricing initiative. Both Retail Banking Norway and Retail Banking Sweden are striving to achieve a better balance between loans and deposits to minimise funding costs.

Home loan margins in Norway in particular, but also in Sweden, were under considerable pressure.

#### KEY INTEREST RATES

In the second half of the year, Retail Banking Finland saw pressure from European interest rates, and to meet increased funding costs, also this unit carried out a general repricing of products for selected customer segments.

The Irish and Northern Ireland economies continued to toil under considerable public budget deficits and remained under pressure. Banking Activities Ireland repriced home loans, and Banking Activities Northern Ireland adjusted prices on new loans to both personal and business customers.

The Baltic economies benefited from an improved business environment.

Corporate & Institutional Banking saw prices come under heavy pressure in the first half of 2011, partly because of expectations of improving market conditions and limited loan demand. The wider market uncertainty and higher funding costs reversed the trend in the third quarter, though, and loan margins in the international markets rose in the second half of the year.

#### Financial summary

Banking Activities posted a pre-tax loss of DKK 0.5 billion, against a loss of DKK 1.7 billion last year.
The improvement derived mainly from reduced expenses.

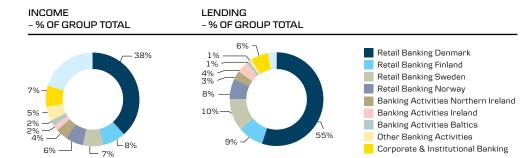

At DKK 34.6 billion, total income from Banking Activities virtually matched the 2010 level. Net trading income rose, but net fee income fell.

Net interest income amounted to DKK 23.3 billion in 2011, largely matching the 2010 level.

At Retail Banking Denmark, net interest income fell 4% from the level in 2010. Higher lending rates added DKK 0.4 billion to income, but this was offset by the effect of falling interest rates and declining lending volumes.

Several business units showed positive trends, however. At Retail Banking Finland, Retail Banking Sweden and Corporate & Institutional Banking combined, net interest income rose 9% because of wider deposit margins.

At Banking Activities Ireland, on the other hand, narrower lending margins, lower lending volumes and suspension of interest payments caused net interest income to fall 12%.

Net interest income was also squeezed by changes in the allocation of funding costs for lending and deposit activities that took effect on 1 January 2011.

Falling interest rates in the second half of 2011 reduced the effect of higher lending rates. Net interest income was up DKK 0.9 billion over the first-half level, however, and well above the announced target of DKK 0.5 billion in additional earnings.

In the fourth quarter, net interest income rose 3% over the third-quarter level. Several business units contributed to the rise. At Retail Banking Denmark, price increases did not offset the declining interest rates, and net interest income matched the level in the third quarter.

Concern about the global economy kept the banking sector's funding costs high and credit quality under pressure. Retail Banking Denmark therefore raised lending rates again on 3 February 2012.

Total expenses declined 5% mainly because of the expiry of Bank Package 1. Adjusted for this factor and other one-off payments, expenses rose 2%. Marketing costs and general increases in wages and prices were the main reasons for the rise. Provisions for severance pay and costs relating to the adjustment of distribution channels contributed DKK 0.4 billion to the rise.

Loan impairment charges more or less matched the level in 2010. The positive trend in charges continued in several of the Group's markets. Impairment charges at Retail Banking Denmark fell 44% mainly because the 2010 figure included charges for the state guarantee. Charges also reflected a compensation of DKK 0.8 billion deriving from the termination of a credit default swap covering potential losses on mortgage lending. Retail Banking Norway and Retail Banking

Sweden saw an increase in charges mainly because of charges against a few large exposures. Retail Banking Sweden recognised most of its charges in the fourth quarter. The persistently difficult market conditions in Ireland and Northern Ireland forced the units there to post substantial impairment charges.

Higher charges relating to commercial property, agricultural and personal customer exposures in Denmark led to a 36% rise in impairment charges from the third quarter to the fourth quarter. At Corporate Banking, charges rose because of a few large exposures. At the Irish and Northern Ireland banking units, fourth-quarter charges related mainly to the commercial property segment.

Total lending amounted to DKK 1,699 billion, slightly more than in 2010.

Total deposits remained largely at the end-2010 level and amounted to DKK 701 billion.

#### Operations

The Group continues to support Banking Activities by investing heavily in digital technology to drive product innovation, focusing on usability and increased accessibility. For example, since September 2010, the Group has introduced mobile banking applications for smartphones in its Nordic and Irish markets. The customer response to mobile banking was positive, and by the end of December 2011, the applications had been downloaded about 509,000 times.

Banking Activities always monitors customer needs for more flexibility. It launched a banking solution for the iPad in the Nordic markets in November and December 2011.

The customer response to tablet banking was also positive, and at 31 December 2011, the app had been downloaded some 67,000 times.

<sup>\*</sup> Including Corporate & Institutional Banking

In addition, Banking Activities interacts directly with customers through Facebook and Twitter, most recently when it developed and launched the iPad app on the basis of input from customers in the Danske Idea Bank campaign. The campaign invited Facebook users to suggest improvements to the mobile banking solution.

Since the beginning of 2010, personal online banking use has increased by some 20%. During the same period, cashier transactions fell accordingly. At the end of 2011, logons via the mobile banking solution accounted for 15% of online logons. Seven per cent of all online logons and online transactions are now made through mobile banking.

The trend is the same for business customers, with three out of four using Business Online. In Denmark, Business Direct has quickly become a solid success, with about 76,000 business customers, or 50% of the customer base, now being served by the contact centre.

#### Market shares

The market share of lending increased in Denmark in 2011, and the Group maintained its share of the Swedish and Norwegian markets. The Finnish banking unit maintained its market share of

lending, but the share of deposits declined slightly. The Irish unit improved its market share of both lending and deposits.

BANKING ACTIVITIES

#### Outlook for 2012

The expected macroeconomic climate bodes for low growth in the Group's markets, with low interest rates and continued challenges in several housing markets.

Recent data on house prices in Denmark show a fall in prices in 2011, and this trend is likely to continue in 2012. The same is expected in Ireland and Northern Ireland. Swedish and Finnish real property prices are also forecast to fall, while house prices in Norway are likely to continue upwards.

Interest rates are forecast to be generally unchanged or falling in 2012.

Because of the macroeconomic conditions, Banking Activities will focus on efficiency improvements through higher profitability and enhanced competitiveness.

To increase earnings, Banking Activities will focus on price differentiation, including price adjustments. Tight cost control will reduce expenses.

<sup>\*\*</sup> Estonia, Latvia and Lithuania constitute Banking Activities Baltics.

Market share information is based on data reported to local central banks.

- SATISFACTORY INCOME IN DIFFICULT MARKET CONDITIONS
- STRONG CUSTOMER ACTIVITY AND SATISFACTION
- LIMITED EXPOSURE TO SOUTHERN EUROPEAN GOVERNMENT BONDS

#### Market conditions

The year 2011 was a challenging period in the capital markets, with historically high volatility and a liquidity squeeze. Doubts about a number of European countries' ability to repay their debts generated doubts about the European financial system, which in turn caused funding costs to rise.

#### Financial summary

Profit before tax declined to DKK 4.1 billion from DKK 4.7 billion in 2010.

Loan impairment charges declined because of a net reversal of previously recognised charges of DKK 1.0 billion, against a reversal of DKK 0.6 billion in 2010.

Expenses ended at around the same level as in 2010 mainly because of lower performance-based compensation.

#### Danske Markets

Profit before tax amounted to DKK 3.8 billion, against DKK 3.7 billion in 2010. Income from trading in fixed-income and foreign exchange products was satisfactory. Income from equity trading, down 50%, was unsatisfactory.

All year, customer-driven trading in fixed-income, derivatives and foreign exchange products was satisfactory. Institutional customers were particularly active in switching hedging positions DANSKE MARKETS IS RESPONSIBLE FOR THE GROUP'S ACTIVITIES IN THE FINANCIAL MARKETS. TRADING ACTIVITIES INCLUDE TRADING IN FIXED INCOME PRODUCTS, FOREIGN EXCHANGE, EQUITIES AND INTEREST-BEARING SECURITIES; PROVIDING THE LARGEST CORPORATE CUSTOMERS AND INSTITUTIONAL CLIENTS WITH FINANCIAL PRODUCTS AND ASSISTING THEM WITH DEBT ISSUES ON THE INTERNATIONAL FINANCIAL MARKETS. GROUP TREASURY COVERS THE GROUP'S STRATEGIC FIXED INCOME, FOREIGN EXCHANGE AND EQUITY PORTFOLIOS. INSTITUTIONAL BANKING INCLUDES FACILITIES WITH INTERNATIONAL FINANCIAL INSTITUTIONS OUTSIDE THE NORDIC REGION. FACILITIES WITH NORDIC FINANCIAL INSTITUTIONS FORM PART OF THE GROUP'S BANKING ACTIVITIES.

from euros to Nordic currencies. This had a positive effect on earnings – especially from derivatives. International research institutes regularly assess Danske Markets' level of customer satisfaction and market shares. In 2011, Danske Markets' market share was high or rising in all product areas and countries.

Equity market earnings saw a rise in commissions, although commissions generally fell sharply in that market. Volume growth was driven by Swedish and other international customers in particular, who also exhibited increased customer satisfaction. Still, the result of market-making activities was unsatisfactory.

Customer-driven earnings from Debt Capital Markets were satisfactory as Danske Markets participated in a number of important bond issues.

In general, the poorly performing interbank market made it more expensive for banks to fund their activities. Higher funding costs, combined with significant volatility in the market, led Danske Markets to adopt a more conservative risk profile. This had an adverse effect on income from market-making in several products.

In Sweden, total income from trading rose. In Denmark and Finland, income remained at the 2010 level, while it fell in Norway. The Irish activities generated satisfactory income.

Throughout the year, the Group's net exposure to southern European government bonds was limited. Fluctuations in the market values of these bonds had limited influence on net trading income.

#### **Group Treasury**

Group Treasury's pre-tax profit fell to DKK 0.3 billion from DKK 1.0 billion in 2010. The unit's income included an unrealised capital gain on

Danske Bank's shareholding in Nets Holding A/S of DKK 0.4 billion in 2011, against DKK 0.7 billion the year before. The tough market conditions had an adverse effect on earnings.

A negative value adjustment of DKK 0.9 billion on the available-for-sale bond portfolio was recognised directly in shareholders' equity. In 2010, the Group recognised a negative value adjustment of DKK 0.1 billion.

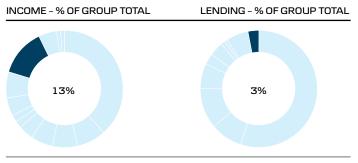

#### Operations

Despite the difficult conditions, Danske Markets maintained its focus on serving customers by providing liquidity and risk-hedging facilities. In 2011, Danske Markets strengthened its market position and customer satisfaction level.

For the seventh year running, the Prospera research institute confirmed Danske Markets Equities' position as the best equity house in Denmark. The survey also showed improved ratings in other markets.

#### Market outlook

In 2012, Danske Markets expects to see strong activity continue and to maintain its market position. The overall performance of Danske Markets and Treasury, however, will depend greatly on market conditions and trends in the financial markets, including the level of securities prices.

- SUCCESSFUL LAUNCH OF PEP V BY DANSKE PRIVATE EQUITY

#### Market conditions

During the second half of 2011 in particular, the capital markets saw significant turbulence and volatility because of the European debt crisis. After a fairly stable beginning to the year, most equity markets dropped 15-20% in August 2011, while bond prices rose and their yields fell. By the end of 2011, most equity indices were 5-10% lower than they were at the beginning of the year.

Danske Capital strengthened its position in the Nordic unit trust markets, achieving a share of net sales of around 40%. Measured in terms of market capitalisation, Danske Capital's share of the Nordic market was 11.9%, up 0.7 of a percentage point from the year before.

#### Financial summary

Income at Danske Capital rose 6% to DKK 1,980 million, against DKK 1,873 million in 2010. Income was adversely affected by lower performance-related fees, which were down to DKK 219 million, against DKK 271 million in 2010. In the third and fourth quarters in particular, income also suffered from developments in the financial markets, including a decline in the proportion of total assets

DANSKE CAPITAL DEVELOPS AND SELLS WEALTH MANAGEMENT PRODUCTS AND SERVICES THAT ARE OFFERED THROUGH THE GROUP'S BRANCHES AND FINANCE CENTRES AND DIRECTLY TO BUSINESSES, INSTITUTIONAL CLIENTS AND EXTERNAL DISTRIBUTORS. DANSKE CAPITAL SUPPORTS THE BANKING ACTIVITIES THROUGH DEVELOPMENT AND UPDATING OF THE GROUP'S OVERALL PRIVATE BANKING AND WEALTH MANAGEMENT CONCEPT. DANSKE CAPITAL IS REPRESENTED IN DENMARK, SWEDEN, NORWAY, FINLAND, ESTONIA, LITHUANIA AND LUXEMBOURG.

under management invested in equities, which fell from an average of 31% in the first half of 2011 to 27% in the second half of the year.

Total expenses rose 5% over the level last year.

At 31 December 2011, assets under management amounted to DKK 606 billion, up DKK 4 billion from the level at 31 December 2010. Net sales to institutional clients and retail banking customers came to DKK 15 billion. Developments in the financial markets, however, led to a total negative market value adjustment of DKK 11 billion.

Of the net sales of DKK 15 billion, institutional clients accounted for DKK 11 billion and retail banking customers for DKK 4 billion.

The unit trust business posted above-benchmark returns in 48% of its funds. Of the bond-based funds, 42% delivered above-benchmark returns, and for equity-based funds, the figure was 52%. Of balanced products, 44% performed above their benchmarks.

#### Products and initiatives

On 1 November 2011, Danske Private Equity held the first closing of its fifth fund, Danske PEP V, with a total commitment of around DKK 2.9 billion. This made Danske PEP V the second-largest private equity fund-of-funds raised in Europe in 2010 and 2011. Danske PEP V is expected to have a total commitment of some DKK 4.5 billion by the end of 2012.

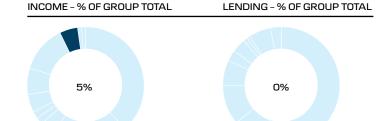

In the first quarter, and for the third consecutive year, investment research provider Morningstar ranked Danske Invest the best unit trust in Denmark for its performance in equities. And in a survey conducted by Thompson Reuters, Danske Capital was ranked the best asset manager in Denmark.

#### Market outlook

In 2012, Danske Capital expects to maintain its position in asset management and to strengthen its position in international private banking.

Net income as % p.a. of allocated capital	7.7	37.4		43.1	-33.5	17.9	4.6

- INCOME FROM INSURANCE BUSINESS OF DKK 0.6 BILLION
- TOTAL PREMIUMS UP 13% TO DKK 27.3 BILLION
- EXPENSE RATIO DOWN FROM 5.0% TO 4.6%

The Group's insurance business posted income of DKK 0.6 billion, against DKK 2.1 billion in 2010. The result was affected by a lower investment return and the fact that the risk allowance could be booked for only one of four interest rate groups. At the end of the year, the shadow account balance was DKK 1.2 billion.

In December, the extraordinary financial situation prompted the Danish FSA to allow an adjustment of the discount yield curve for products such as Danica Traditionel. Consequently, one element of the curve may now be calculated as a 12-month moving average. Danica used the principles of the new discount yield curve in its calculations, and

the effect was a DKK 2.8 billion reduction in life insurance provisions at 31 December 2011.

The total collective bonus potential of the interest rate, cost and risk groups amounted to DKK 0.4 billion. Danica Pension used DKK 1.8 billion of the bonus potential of paid-up policies to cover losses on two of the interest rate groups and therefore introduced a charge on policy transfers and surrenders. The three interest rate groups with the highest benefit guarantees have virtually no bonus potential that can be used to cover any future negative investment returns.

Danish premiums rose 11.3% to a total of DKK 18.8 billion. Premiums for the *Danica Balance* and *Danica Link* market products were up 20%, contributing DKK 11.7 billion. At the end of 2011, some 162,000 customers had chosen these products. As expected, total premiums for *Danica Traditional* saw a decrease, falling 5.3% to DKK 7.1 billion.

DANICA PENSION ENCOMPASSES THE DANSKE BANK GROUP'S ACTIVITIES IN THE LIFE INSURANCE AND PENSIONS MARKET. PRODUCTS ARE MARKETED THROUGH A RANGE OF DISTRIBUTION CHANNELS WITHIN THE DANSKE BANK GROUP, PRIMARILY BANKING ACTIVITIES' OUTLETS AND DANICA PENSION'S INSURANCE BROKERS AND ADVISERS. DANICA OFFERS TWO MARKET-BASED PRODUCTS, DANICA BALANCE AND DANICA LINK. THESE PRODUCTS ALLOW CUSTOMERS TO SELECT THEIR OWN INVESTMENT PROFILE, AND THE RETURN ON SAVINGS DEPENDS ON MARKET TRENDS. DANICA PENSION ALSO OFFERS DANICA TRADITIONEL. THIS PRODUCT DOES NOT OFFER INDIVIDUAL INVESTMENT PROFILES, AND DANICA PENSION SETS THE RATE OF INTEREST ON POLICYHOLDERS' SAVINGS.

#### Market conditions in Denmark

Competition increased in 2011, with many tenders for both existing and potential customers. Danica Pension maintained its position as one of the leading life insurance and pensions providers on the Danish market.

The Danish government adopted new legislation that cut the tax deduction limit on annuity pension contributions from DKK 100,000 to DKK 50,000 on 1 January 2012. For customers saving under a company pension plan, Danica introduced an automatic transfer feature so that all contributions exceeding the new limit are automatically transferred to a lifelong annuity.

#### Income

The return on bonds was positive because interest rates declined throughout the year. The decline in rates also caused an increase of DKK 8.8 billion in technical provisions, however. Insufficient returns on customer funds were another reason why Danica needed to strengthen provisions by DKK 40 million.

Net income was adversely affected by the DKK 94 million special allotment payable to certain policyholders.

Unit-linked business (*Danica Balance* and *Danica Link*) posted a technical result of DKK 269 million, down DKK 58 million from 2010. The main reasons for the decline were costs related to the liquidation of the Irish activities and a lower risk result in Sweden.

The health and accident result declined because of heavier pressure on prices and because run-off gains at the Danish unit were lower than in 2010.

More details about Danica Pension's profit policy and consolidation in the financial statements

of the Danske Bank Group can be found at www.danskebank.com/ir.

#### Activities outside Denmark

Outside Denmark, premiums grew a full 18.1% to DKK 8.5 billion. The increase came mainly from premiums in Norway thanks in part to a portfolio transfer. Because of its small business volume in Ireland, Danica Pension initiated a process to sell or liquidate the Irish activities within 12 to 18 months.

TOTAL PREMIUMS [DKK billions]	2011	2010
Premiums, Denmark		
Danica Traditionel	7.1	7.5
Unit-linked business	11.7	9.8
Health and accident	1.3	1.3
Internal transfers	-1.3	-1.7
Premiums, international	8.5	7.2
Total	27.3	24.1

#### Investment return

The return on *Danica Balance* and *Danica Link* investments was DKK -1.1 billion, representing an average rate of return of -2.5%, against 12.9% in 2010. The average annual return over the past three years is 10.2% for *Danica Balance* and 11.4% for *Danica Link*.

The return on customer funds in *Danica Traditionel* was 6.8%, against 5.8% in 2010. Including changes in technical provisions, the return was 2.1%.

During the year, Danica Pension reduced its risk on equity and credit bond investments in *Danica Traditionel* and adjusted its interest rate exposure. At the end of the year, equity, credit bond and property exposures totalled 29.2%.

At 31 December 2011, the equity and credit bond exposures of the three interest rate groups with the highest benefit guarantees totalled DKK 3.5 billion and DKK 15.5 billion, respectively.

At the same date, Danica Pension's exposure to government bonds included DKK 5.5 billion in bonds issued by Italy, DKK 1.5 billion in bonds issued by Spain, and DKK 0.3 billion in bonds issued by Ireland. Investments for which further negative returns may affect the result directly accounted for DKK 3.7 billion of this exposure. Danica Pension had no exposure to government bonds issued by Greece or Portugal.

CUSTOMER FUNDS - DANICA TRADITIONEL								
Holdings and returns	Share (%) Return (%) 2011 2010 2011 201							
Real property	10	10	6.2	2.6				
Bonds etc.	84	80	8.4	5.1				
Equities	6	10	-5.4	17.1				
Total	100	100	6.8	5.8				

#### Financial strength

At the end of 2011, the Danica group's total financial strength – that is, its excess capital base and collective bonus potential – stood at DKK 10.0 billion. Its solvency need amounted to DKK 9.4 billion and exceeded the solvency requirement by DKK 0.9 billion. Danica has chosen to base its solvency need on the yellow traffic light scenario, which covers more adverse risk scenarios than those of the Danish FSA's red traffic light [see below]. The bonus potential of paid-up policies amounted to DKK 4.0 billion and may be used partly for loss absorption.

The Danish pension industry is subject to the Danish FSA's requirement for Traffic Light stress testing, which includes testing the capital base. Danica Pension is well prepared for this risk scenario, which is based on a 12% fall in equity prices and an interest rate change of 0.7 of a percentage point. At the end of 2011, a 12% drop in equity prices would have reduced the bonus potential of paid-up policies by DKK 0.8 billion, the collective bonus potential by DKK 0.1 billion, and shareholders' equity by DKK 0.3 billion. A rise in interest rates of 0.7 of a percentage

point would have increased the bonus potential of paid-up policies by DKK 3.1 billion, while it would have reduced the collective bonus potential by DKK 0.2 billion and shareholders' equity by DKK 0.5 billion.

In November 2011, Standard & Poor's reaffirmed its A rating of Danica Pension (with a negative outlook). Danica Pension's S&P rating depends highly on Danske Bank's rating, which was also reaffirmed. After the repayment of the subordinated loan in October 2011, Danica Pension decided not to maintain a rating.

#### Outlook for 2012

In 2012, Danica Pension expects to maintain its position as one of the leading Danish life insurance and pensions providers.

The 2012 result will depend greatly on developments in the financial markets and the possibility of booking the risk allowance and any balance on the shadow account to income. The drawing on the bonus potential of paid-up policies in 2011 must be restored for each interest rate group in order for the Group to be able to book a risk allowance to income in 2012.

Under current rules and if the yield differential between Danish and German government bonds remains close to zero or becomes negative over the next year, this will result in a negative profit contribution in 2012.

For Danica Pension to book the full risk allowance to income in 2012, the group of new schemes as well as the group with medium risk must have investment returns of 4-5%, the interest rate group with low benefit guarantees must have a return of 8-9%, and the interest rate group with high benefit guarantees must have a return of 5-6%. It is therefore unlikely that the full risk allowance for all interest rate groups will be booked in 2012.

# OTHER ACTIVITIES

EMPLOYEES 5.596 PRE-TAX PROFIT DKK -881 MILLION

OTHER ACTIVITIES [DKK millions]	2011	2010	Index 11/10	04 2011	03 2011	02 2011	01 2011

Own shares	274	-84	-	22	94	99	59
Other, including Group support functions	-1,421	295	-	37	-33	-457	-968
Total Other Activities	-881	494	-	120	135	-278	-858

OTHER ACTIVITIES ENCOMPASSES THE GROUP'S REAL PROPERTY ACTIVITIES AND SUPPORT FUNCTIONS. OTHER ACTIVITIES ALSO INCLUDES THE ELIMINATION OF RETURNS ON OWN SHARES AND BONDS.

Other Activities posted a pre-tax loss of DKK 0.9 billion, against a profit of DKK 0.5 billion in 2010. The decline was caused mainly by the expenses for the commitment to the Danish Guarantee Fund for Depositors and Investors recognised in 2011.

The real property activities posted a profit of DKK 266 million, down DKK 17 million from the year-earlier level. The main reason for the decline was higher maintenance costs.

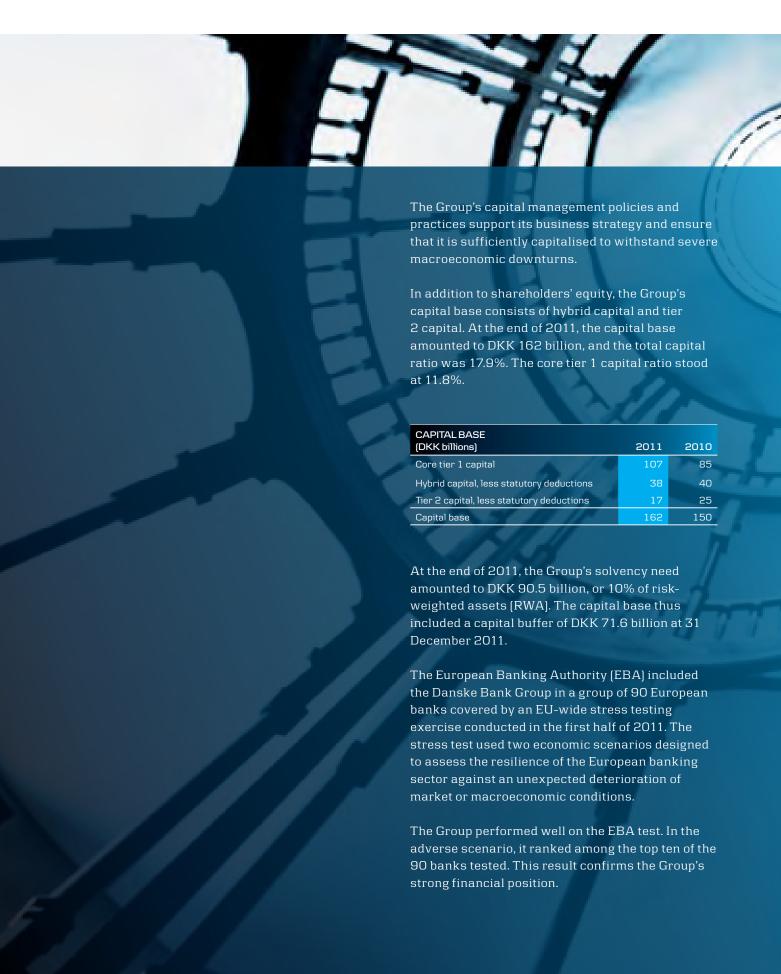

The elimination of returns on own shares led to income of DKK 274 million in 2011, against an expense of DKK 84 million in 2010.

Other income stood at DKK 0.3 billion, against DKK 0.8 billion last year. It benefited particularly from a refund of excess VAT paid in previous years.

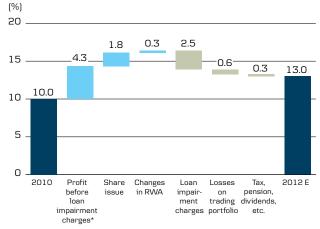

Expenses totalled DKK 1.4 billion in 2011, against DKK 0.4 billion in 2010. The estimated commitment of DKK 0.7 billion to the Danish Guarantee Fund for Depositors and Investors in connection with the resolution of Amagerbanken A/S, Fjordbank Mors A/S and Max Bank A/S was the key factor behind the increase.

Severance payments and a DKK 161 million adjustment of writedowns of the assets of a temporarily acquired company also contributed to the rise in expenses.

# CAPITAL AND LIQUIDITY MANAGEMENT

# CHANGE IN TIER 1 CAPITAL RATIO UNDER EBA'S ADVERSE SCENARIO

 $^\star$  Excluding losses on trading portfolio. The tier 1 capital ratio is calculated in accordance with the guidelines for the EBA stress test, with RWA equal to 80% of the Basel I RWA.

The Group's strong financial position was also confirmed by the EBA's capitalisation test of European banks, which was published in December 2011. This test was conducted to assess European banks' need for recapitalisation. As expected, the Group passed the test with a capital level substantially above the EBA's requirement.

The Group bases its capital considerations on an assessment of capital requirements under the current capital adequacy rules and the transitional rules and on an assessment of the effects of future regulation, including Capital Requirements Directive IV (CRD IV). The capital considerations also take account of criteria such as expected growth and earnings, dividend policy, and stress test scenarios.

The Group aspires to improve its credit ratings, which are important for its access to liquidity and the pricing of its long-term funding. Desired ratings are therefore included in the capital considerations.

In the spring of 2011, the Group strengthened its capital position through a fully underwritten rights offering with net proceeds of DKK 19.8 billion. One purpose of the share capital increase was to enable the Group to repay, as early as 2012, the hybrid capital raised from the Danish state in 2009. A financially satisfactory agreement on prepayment terms could not be reached, however, and the Group decided not to prepay the loan. Under the loan agreement, the loan thus cannot be repaid until 2014.

As a result of the negotiations with the Danish government on the loan agreement, it would be possible to cancel the option and obligation to convert the loan capital into share capital in full or in part until May 2014 in accordance with the terms and conditions of the loan. Cancellation would not change the annual loan payment. The Board of Directors has decided not to submit a proposal to amend the agreement to the general meeting on 27 March 2012, however, as the regulatory requirements for hybrid capital etc. have not yet been clarified.

In 2011, the Group launched a number of initiatives to strengthen its apparatus for calculating RWA for credit risk, including revised and improved models and parameters, such as a new method for calculating the through-the-cycle probability of default. In the aggregate, these initiatives increased RWA by DKK 34 billion. The Group believes that its models are robust and sufficiently conservative. The Group continues to monitor its models and their results and will, if necessary, make adjustments for changes in economic, financial or regulatory conditions.

The new capital requirements (CRD III), which took effect at the end of 2011, include a requirement to use stressed VaR for market risk in the calculation of RWA. In the fourth quarter of 2011, RWA rose by DKK 11.5 billion as a result of CRD III.

At 31 December 2011, RWA amounted to DKK 906 billion, against DKK 844 billion at 31 December 2010.

#### **ICAAP**

The Group's capital management policies and practices are based on an internal capital adequacy assessment process (ICAAP). In this process, the Group regularly identifies its risks and determines its solvency need.

As part of the ICAAP, management identifies the risks to which the Group is exposed for the purpose of assessing its risk profile. It also determines the risks to be covered by capital. In addition, the ICAAP involves capital planning to ensure that the Group is sufficiently capitalised in the years ahead. One of the planning tools is stress testing.

Assessing whether the Group's solvency need allows for all material risks that the Group faces is an important part of the process. The Group has set up a process to quantify, on the basis of input from internal experts, any add-ons to the solvency need. Capital add-ons are additive, although they may overlap. The process thus represents a conservative assessment of the solvency need.

The regulatory framework for the Group's capital management is rooted in the CRD, which comprises three pillars based on Basel II guidelines:

- Pillar I contains a set of rules for calculating the capital requirement (8% of RWA for credit risk, market risk and operational risk).
- Pillar II describes the framework for the ICAAP and the dialogue with the Danish FSA. The ICAAP determines the solvency need (see below).
- Pillar III deals with market discipline and sets forth disclosure requirements for risk and capital management. The Group complies with the Pillar III disclosure requirements through its publication of Risk Management 2011, which is available at www.danskebank.com/ir.

While Pillar I calculates risks and capital requirements on the basis of uniform rules for all credit institutions, the ICAAP under Pillar II takes into account the individual characteristics of a given institution and covers all relevant risk types, including risks not addressed under Pillar I.

### Solvency need

The Group calculates its solvency need as the highest of the following measures:

- The capital requirement according to the Group's internal models for economic capital.
- The capital requirement under Pillar I plus an add-on to address risks that are not covered by Pillar I (Pillar I+).
- The capital requirement under the Basel I transitional rules.

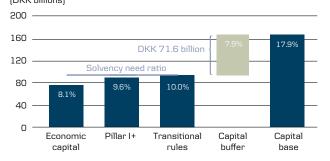

The capital requirement under the Basel I transitional rules is calculated as 80% of the capital requirement under Basel I, or 6.4% of RWA under Basel I. In its revision of the CRD (CRD IV), the European Commission has proposed an

extension of the transitional rules for several years. A final decision on this matter is expected in 2012.

Both the Pillar I+ requirement and economic capital are supplemented by add-ons to reflect any uncertainty about the risk models, and the capital level is subject to ongoing qualitative adequacy assessments.

The calculation of the solvency need for the Danske Bank Group and Danske Bank A/S is described in more detail in Risk Management 2011, which is available at www.danskebank.com/ir. Risk Management 2011 also provides details on the management of credit risk, market risk and liquidity risk.

# SOLVENCY NEED AND CAPITAL BASE, END-2011 (DKK billions)

### Stress testing

In the ICAAP, the Group uses macroeconomic stress tests to project its solvency need and capital levels under various unfavourable scenarios. Stress tests are an important means of analysing the Group's risk profile since they give management a better understanding of how portfolios are affected by macroeconomic changes, including the effects of adverse events on capital.

#### MAIN STRESS TEST SCENARIOS

SCENARIO	DESCRIPTION
Mild recession	A geopolitical crisis dampens global demand temporarily. This scenario assumes slight economic contraction in the first year followed by a recovery. In the subsequent years, growth will be lower than assumed in the base case scenario.
Severe recession	The scenario assumes a deep international recession with a significant slump in global trade, which entails lower export demand. Domestic investment, consumption and house prices fall. Central banks around the world adopt a more accommodating monetary policy.
Regulatory scenarios	Danish FSA: Base case and stress scenario.
	EBA: Base case and adverse scenario.

Risk Management 2011 provides more information about stress testing.

### Liquidity and funding

Liquidity management is intended to ensure that the Group always has sufficient liquidity to meet its obligations. The Group has organised its liquidity management to meet this objective by ensuring that it has robust funding options that enable it to withstand even less probable situations that would have a substantial adverse effect on its liquidity.

Developments in the financial markets in 2011 and the economic outlook in Europe and the US had an adverse effect on the banking sector.

The Danish Bank Package 3 was used for the resolution of Amagerbanken A/S, and this aggravated the negative situation in the Danish banking sector. The Group was downgraded twice, mainly because the rating agencies felt that Bank

Package 3 implicitly weakened systemic support. The adoption of Bank Package 4 in late summer and the prospect of designating systemically important financial institutions in Denmark took some of the pressure off the Danish banks. The extension of the compensation scheme under which healthy banks can take over all or parts of a distressed bank also helped ease the pressure.

12-MONTH LIQUIDITY (DKK billions) 350 300 250 200 150 100 50 0 -50 -100 q 10 11 12 Months 31 December 2011 31 December 2010 31 December 2009 31 December 2008

The Group maintained a strong liquidity position despite the year's events, and its 12-month liquidity curve is positive for more than two and a half years ahead.

The raising of substantial long-term funding and the favourable changes in the loan-to-deposit ratio in 2009 and 2010 contributed to the Group's positive liquidity position and will help it meet the future regulatory requirements for liquidity.

The Group monitors its funding composition to ensure that it is well diversified. A well-balanced portfolio of liabilities generates a stable funding flow and protects the Group against market volatility.

The Group's comprehensive and well-established funding programmes in Europe and the US and its substantial personal customer deposits are crucial for its liquidity management. Covered bonds play an increasingly important role in funding.

In 2011, the Group issued covered bonds for DKK 37.8 billion. Currently, the bonds are based on Danish, Norwegian, Swedish and Finnish loans, and there is still unexploited potential in loans that can serve as collateral for such bonds.

In addition, senior debt for DKK 21.3 billion was issued in 2011, a large portion of it in April, when notes worth USD 1.9 billion, or DKK 9.8 billion, were issued under the US note programme.

On 16 June 2009, Danske Bank entered into an agreement on state-guaranteed bond issues with maturities of up to three years (Bank Package 2). At the end of 2011, Danske Bank had issued stateguaranteed bonds for DKK 36.4 billion maturing in 2012. The amount required to redeem the bonds is included in the liquidity reserve.

In the autumn of 2011, the Danish central bank expanded its lending facility to Danish banks by allowing them to borrow on the basis of collateral consisting of high-quality loans. A number of other European countries have similar programmes. The Danish central bank followed the ECB by introducing an option to raise loans with a maturity of three years. The initiatives are likely generally to benefit the funding markets and offer banks a way of optimising their liquidity management. At the end of 2011, the Group had drawn around DKK 11 billion on the ECB facility.

# Regulations

New regulations for the financial sector are being proposed in the EU and beyond. The Group follows this process closely and supports measures to strengthen the resilience of the sector and its ability to support economic growth.

In July 2011, the European Commission published its proposal for a major revision of the CRD (CRD IV). The proposal will implement the Basel III rules in the EU. The political negotiations will continue in the period until 2013, and the final rules may differ from the original proposal.

The rules will come into force at the beginning of 2013. According to the proposal, the details of the liquidity regulations will be determined later, and the member states must determine the degree of phasing-in of the capital requirements in the period until 2019.

The Group considers it important that the phasingin of the new capital requirements in the EU does not deviate from the Basel III phasing-in period agreed on internationally.

The Group does not expect the European Commission's proposal for CRD IV to lead to stricter capital requirements than those in the Basel III rules and will thus be well prepared to meet future EU capital requirements.

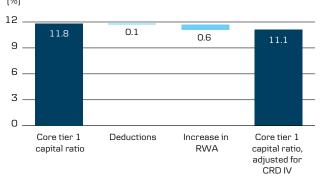

Fully phased-in CRD IV rules are estimated to reduce the Group's current core tier 1 capital ratio of 11.8% by about 0.7 of a percentage point.

The Group estimates that an increase in RWA because, for example, of higher capital requirements for counterparty risk will account for 0.6 of a percentage point of the reduction. Because of changes in market conditions, however,

estimates of the increase in RWA may be relatively volatile over time.

The rest of the reduction in the core tier 1 capital ratio derives from deductions, primarily the expected deduction for net assets in defined benefit pension plans.

# CORE TIER 1 CAPITAL RATIO, ADJUSTED FOR CRD IV [%]

Under EU rules, the Group is defined as a financial conglomerate. Danica Pension is therefore included in the consolidated supervision of the Group. The Group uses the EU rules for financial conglomerates to calculate the deduction for its investment in Danica Pension. With CRD IV, the European Commission is proposing that national supervisory authorities may allow financial institutions to continue to use the conglomerate rules instead of the future deduction rules under CRD IV.

In early 2013, the EBA will make proposals to clarify the existing deduction rules under the Financial Conglomerates Directive. The European Commission is also expected to propose a major revision of the Financial Conglomerates Directive in 2013. The Danish rules for financial conglomerates' recognition of insurance subsidiaries in solvency statements may therefore be amended.

The estimated effect of CRD IV on the Group's capital position does not factor in a possible change in capital requirements for Danica Pension as a result of clarifications by the EBA or changes to the Financial Conglomerates Directive. Assuming that the current deduction of DKK 8.4 billion for the Group's investment in Danica Pension is made entirely from core tier 1 capital, the isolated reduction of the core tier 1 capital ratio is estimated to be 0.9 of a percentage point. Under current rules, the deduction for the investment in Danica Pension is made in equal parts from tier 1 capital and tier 2 capital.

The deduction rules of the CRD IV proposal and Basel III for investments in insurance subsidiaries that are not part of financial conglomerates entail a deduction for the part of the investment that exceeds 10% of a credit institution's core tier 1 capital. If this approach were applied to the DKK 18.9 billion investment in Danica Pension, the isolated effect on the core tier 1 capital ratio would be a reduction of about 1.0 percentage point at the end of 2011.

As regards liquidity, the CRD IV proposal contains a definition of liquid assets under the short-term Liquidity Coverage Ratio (LCR) that is broader than the Basel III definition. This opens the possibility for Danish mortgage bonds to be included in the liquidity buffer in line with Danish government bonds and other bonds. The final criteria for LCR must be determined before the LCR becomes effective as a minimum requirement in 2015.

The Group considers it positive that the CRD IV proposal includes plans to postpone until 2016 the decision on whether to introduce long-term stable funding requirements, such as the Basel III Net Stable Funding Ratio (NSFR), in 2018. In

November 2011, the G20 countries agreed on a set of international guidelines for the regulation and supervision of systemically important financial institutions [SIFIs].

According to the guidelines, SIFIs must have lossabsorbing capacity above the Basel III minimum requirements. A group of global SIFIs in the banking sector has been designated. They will be subject to stricter supervision and higher capital buffer requirements than those in Basel III.

As part of the political agreement on Bank Package 4 of September 2011, a committee will be set up to analyse, on the basis of future EU regulations, the criteria that a bank must meet in order to be considered a Danish SIFI. The committee will also set forth the requirements that will be placed on Danish SIFIs and the instruments that can be used for SIFIs that encounter difficulties.

Against this background, the Group expects that it will be considered a Danish SIFI. Its position is that any requirements placed upon SIFIs in Denmark must be based on a set of clear international rules in order to avoid competitive distortions because of local differences in the treatment of SIFIs.

# INVESTOR RELATIONS

The Investor Relations department is responsible for the Group's communications with investors and analysts. In accordance with the Group's overall policy of openness and transparency, Investor Relations ensures that stakeholders receive correct and adequate information through regular contact and the www.danskebank.com/ir site. In 2011, Danske Bank won IR Global Rankings' award for Best Ranked IR Website.

To support stakeholder relations, Investor Relations holds roadshows four times a year upon the release of the Group's financial reports. In 2011, the roadshows covered the Nordic countries, Europe, the US and Canada and attracted around 450 investors.

Investor Relations and senior management also build relations with analysts, shareholders and potential investors by presenting and discussing current issues of relevance to the Danske Bank Group at seminars and conferences in and outside Denmark.

At the end of 2011, 28 equity analysts (seven in Denmark) had issued research reports on Danske Bank.

# Danske Bank shares

Danske Bank shares are listed on NASDAO OMX Copenhagen and are included in a number of Danish and international equity indices, for example the OMX Copenhagen 20 Index (OMXC20). At the end of 2011, Danske Bank shares had an index weighting of about 7.3%.

The share price fell from DKK 132.3 at 31 December 2010 to DKK 73.0 at 31 December 2011, a decline of 45%. In comparison, the OMXC20 index lost 15%, while the MSCI Europe Banks Index was down 34%.

The average daily trading volume of Danske Bank shares was DKK 227 million, against DKK 207 million in 2010. Danske Bank shares were some of the most actively traded shares in the OMXC20 index.

DANISKE BANK SHARES (DKK)	0011	2010
DANSKE BANK SHARES (DKK)	2011	2010
Share capital (millions)	9,317	6,988
Share price (end of year)	73.0	132.3
Total market capitalisation (end of year) (billions)	68	99
Earnings per share	1.9	4.9
Dividend per share		
Book value per share	135.7	140.0
Share price/book value per share	0.5	0.9

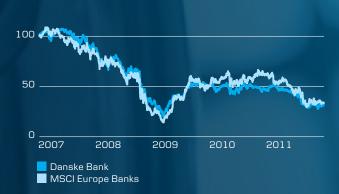

Share ratios have been divided by a factor of 1.0807 to reflect the share capital increase in April 2011. At the end of 2010, the actual price of Danske Bank shares was DKK 143.0.

Over the past five years, Danske Bank shares have generated an average annual return of -19%, including dividends. The corresponding figure for the MSCI Europe Banks Index is an annual average of -24%.

# DANSKE BANK SHARES

Index 2007 = 100

150

# Dividend policy

Danske Bank's overall financial objective is to provide shareholders with a competitive return through share price appreciation and dividend payments.

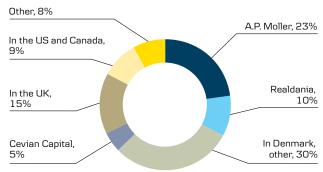

Since 1 October 2010, and for as long as the Danish state holds hybrid capital in Danske Bank, the Group may distribute dividends only if the dividends can be paid in full out of the net profit. The loan agreement with the Danish state also stipulates an increase in the interest rate if annual dividend payments exceed DKK 4.9 billion.

With due consideration to the Group's capital needs, the Board of Directors wishes to distribute up to one third of the net profit for the year, assuming that the dividend payments do not result in an increase in the interest payments on the hybrid capital raised from the Danish state. In view of the macroeconomic and regulatory uncertainty, however, the Board is recommending that no dividend be paid for 2011.

### Shareholders

At the end of 2011, Danske Bank had about 338,000 shareholders. Twenty investors owned about 49% of the share capital.

# DANSKE BANK'S SHAREHOLDERS 2011

Danske Bank estimates that shareholders outside Denmark, mainly in the UK and the US, hold more than 37% of its share capital.

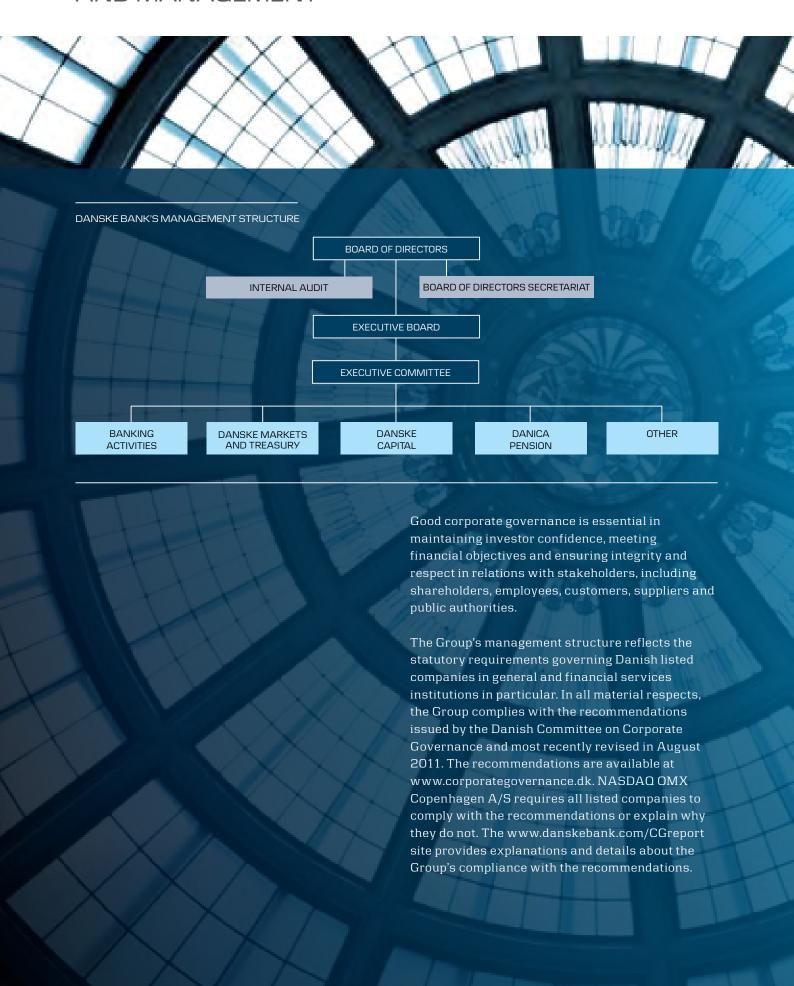

According to the Danish Companies Act, shareholders in a company must notify the company if the voting rights of their shares exceed 5% of the voting rights of the company's share capital, or if the nominal value of their shares exceeds 5% of the share capital. Shareholders must disclose changes in shareholdings if they exceed or fall below specified percentage thresholds. Three shareholder groups have notified Danske Bank that they hold more than 5% of the share capital:

- The A.P. Møller and Chastine Mc-Kinney Møller Foundation and companies of the A.P. Moller -Maersk Group, Copenhagen, hold 22.84% of the share capital.
- Realdania, Copenhagen, holds 10.07% of the share capital.
- Cevian Capital II GP Limited holds 5.02% of the share capital.

Each share entitles the holder to one vote, and all shares carry the same rights.

At the end of 2011, Danske Bank itself held around 0.5% of the share capital. These shares are held for obligations to compensate staff in the form of conditional shares and share options granted under share programmes in previous years and for investments on behalf of policyholders and under pooled schemes.

# ORGANISATION AND MANAGEMENT

In addition to ensuring compliance with statutory requirements, the management structure provides optimal security in the administration of the Group's activities.

Key elements of the management structure are well-defined authorisations and business procedures, regular reporting and transparency regarding the Group's circumstances.

Standards for reporting, financial planning and control, risk management, credit approval, HR development, compliance and the shared IT platform ensure well-structured management of all activities.

Management's ambition is to continually adjust the management structure and the underlying processes to make sure that the Group maintains the highest possible management standards and level of transparency for shareholders.

### General meeting

According to Danske Bank's Articles of Association, an annual general meeting must be held no later than 30 April. Extraordinary general meetings may be held if so decided by the general meeting or the Board of Directors or requested by one of the auditors appointed by the general meeting or by shareholders who jointly hold at least 5% of the shares.

In 2011, Danske Bank held its annual general meeting on 29 March. The agenda, presentation and webcast of the chairman's reports at this and previous general meetings are available at www.danskebank.com/CGreport.

The next annual general meeting will be held on 27 March 2012.

The Board of Directors calls the general meeting by announcement in the Danish Business Authority's IT system and on the Group's website. Written notice of the general meeting is given to all registered shareholders who have requested such notice. The general meeting must be called at three to five weeks' notice.

Shareholders are entitled to table proposals at the general meeting if they observe a few simple formalities. Proposals under the fixed items on the agenda may be made at the general meeting. Any shareholder is entitled to have special business added to the agenda of the general meeting. The shareholder must submit a written request to the Board of Directors, and the request must reach the Board at least six weeks before the general meeting takes place or within one week of the publication of the annual report.

Shareholders are entitled to attend the general meeting if they have requested an admission card at least three days before the meeting. At the meeting, they are entitled to one vote for each share they hold at the registration date, that is, one week before the date of the general meeting.

There is only one class of shares and no limitations on holdings, voting rights or other opportunities for shareholders to influence decisions.

The chairman of the general meeting, who is appointed by the Board of Directors, ensures that the meeting is conducted in an orderly manner. For this purpose, the Articles of Association vest the chairman of the meeting with the authority needed, including the right to arrange discussions, issues to be voted on and voting methods and to conclude debates.

The general meeting will continue to have electronic voting. Resolutions will still be made by a simple majority of votes unless otherwise provided by law or the Articles of Association.

Resolutions to amend the Articles of Association that, under Danish law, cannot be made by the Board of Directors are passed only if adopted by at least two thirds of the votes cast and by at least two thirds of the share capital represented at the general meeting and entitled to vote.

A resolution to wind up Danske Bank by merger or voluntary liquidation can be passed only if adopted by at least three quarters of the votes cast and by at least three quarters of the share capital represented at the general meeting and entitled to vote.

### **Board of Directors**

Board candidates are nominated by shareholders or the Board of Directors and elected by the general meeting, the Group's highest decision-making authority. Every year, the Board of Directors reviews the Board's competency requirements. Danske Bank strives to ensure that the Board always has the appropriate size, composition and diversity in terms of age, gender and nationality to enable it to perform its responsibilities and management tasks. Danske Bank has set a retirement age for members of the Board of Directors: they must retire at the first annual general meeting after they attain the age of 70.

The Board consists of 13 members; eight are elected by the general meeting, and five are staff representatives. Under Danish law, employees are entitled to elect from among themselves a number of representatives equal to half of the number of members elected by the general meeting at the time of the announcement of the staff representative election

Board members elected by the general meeting stand for election every year. Pursuant to Danish law, staff representatives serve on the Board for a four-year term and are elected separately by the Group's employees in Denmark. The five current staff representatives were elected in March 2010, and their term of office will therefore expire in 2014.

Under the current management structure, the Board of Directors outlines the overall principles that govern the affairs of the Group, while the Executive Board is in charge of day-to-day management, observing the guidelines and regulations issued by the Board of Directors.

The rules of procedure for the Board of Directors and the Executive Board lay down the precise division of duties and responsibilities. A summary of these rules is available at www.danskebank.com.

The Board of Directors meets about 12 times a year as scheduled in a meeting plan for each calendar year. Once or twice a year, the Board holds an extended meeting to discuss the Group's strategic situation. The Board held 17 meetings in 2011; four were conference calls to make decisions, and one was an extended strategy meeting.

The Board of Directors appoints the Executive Board, the secretary to the Board of Directors and the Group chief auditor and determines their remuneration.

In recent years, the Board of Directors has systematically evaluated its performance on the basis of a number of criteria. In the process, the board members have examined the Board's overall performance and the individual members' contributions. The evaluation process will continue under the supervision of the chairman. The

outcome of the evaluation process is discussed by the Board of Directors and affects the nomination of new board members.

### Changes to the Board of Directors

On 19 December 2011, Ole Andersen took over from Eivind Kolding as Chairman of the Board of Directors, and Niels B. Christiansen was elected Vice Chairman.

The Board of Directors will propose to the general meeting for 2011 that the members elected by the general meeting be re-elected, except for Peter Højland, who has decided not to stand for re-election, and Claus Vastrup, who is resigning from the Board of Directors as a result of the age limit for board members fixed by the Board of Directors. The Board of Directors will propose to the general meeting that Trond Ø. Westlie, CFO of A.P. Møller – Mærsk A/S, Jørn P. Jensen, CFO of Carlsberg A/S, and Urban Bäckström, Director General of the Confederation of Swedish Enterprise, be elected to the Board.

### **Board committees**

The Board of Directors has appointed four committees to supervise specific areas and prepare cases for subsequent consideration by the full Board: the Audit Committee, the Credit and Risk Committee, the Remuneration Committee and the Nomination Committee.

The committees base their work on clearly defined and publicly disclosed charters that set forth their purposes and duties. The four committees, which report to the Board of Directors, are not authorised to make independent decisions.

The Audit Committee examines accounting, auditing and security issues. These are issues that the Board, the Audit Committee itself, the

Group chief auditor or the external auditors believe deserve examination before they are brought before the full Board. The Audit Committee held six meetings in 2011.

The Credit and Risk Committee monitors significant credit exposures as a preparation for review by the full Board. The committee operates as a credit hearing panel, monitors the quality of the Group's loan portfolio and reviews special renewal applications and exposures. It also monitors the Group's overall risk profile, risk management methods and capital structure. The Credit and Risk Committee held four meetings in 2011.

The Remuneration Committee monitors trends in remuneration levels and incentive programmes and checks that incentive programmes promote sustained, long-term value creation for shareholders. The Remuneration Committee held three meetings in 2011.

The Nomination Committee identifies potential Executive Board and Board of Directors candidates and recommends Board of Directors candidates to the Board of Directors for election at the general meeting. The Nomination Committee held six meetings in 2011.

# Corporate governance recommendations

Danske Bank complies with all recommendations of the Danish Committee on Corporate Governance, with the exception that it does not disclose independence/dependence classifications.

The corporate governance recommendations classify members of boards of directors as either dependent or independent.

On the basis of the recommendations, a minority of the board members elected by the general meeting

are deemed dependent owing to the length of their service on the Board or a material business relationship.

Claus Vastrup joined the Board of Directors on 1 January 1995 and has thus been a board member for more than 12 years and must be deemed dependent.

The Group has credit exposure to companies at which members of the Board of Directors are involved in management, and the Board of Directors has assessed the independence of these members in accordance with the material business relationship criterion. This includes considering whether the individual exposures could relatively easily be transferred to another bank and the implications of this for the Group.

Because of the confidentiality of banking relationships, the Board has chosen not to disclose decisions regarding the individual members' independence.

No board member is allowed to participate in the processing of exposures to companies in which the member has any kind of interest.

The Board will strive to ensure that more than half its members are deemed independent and that it thus complies with the recommendations. This was the case in 2011.

Ole Andersen is the independent and competent member of the Audit Committee, in accordance with the Danish executive order on audit committees in undertakings and groups under the supervision of the Danish Financial Supervisory Authority.

The Group strives to maintain diversity and bring more women into management positions because management believes that many talented

candidates will otherwise be lost. The Group therefore participates in several initiatives, including the Danish government's Charter for More Women in Management, which the Group has signed, and Operation Chain Reaction: Recommendations for More Women on Supervisory Boards. By participating in these initiatives, the Group has set specific targets for its diversity efforts. The Board of Directors discusses the targets at least once a year in accordance with the corporate governance recommendations.

### **Executive Board**

The Executive Board consists of Peter Straarup, Chief Executive Officer; Tonny Thierry Andersen, head of Retail Banking Denmark; Thomas F. Borgen, head of the Group's international banking activities, Corporate & Institutional Banking, Danske Markets and Treasury; Henrik Ramlau-Hansen, head of Group Finance; Georg Schubiger, head of COO Areas (Group Business Development, Group Marketing, Group IT, Group Operations and Group Procurement); and Per Skovhus, head of Group Credit.

On 15 February 2012, when Peter Straarup retires, Eivind Kolding will replace Peter Straarup as Chief Executive Officer.

Per Skovhus, head of Group Credit, wishes to resign for personal reasons and will leave the Executive Board no later than 1 July 2012.

### **Executive Committee**

The Executive Committee is a co-ordinating forum whose principal objective is to take an overall view of Group activities with particular focus on the interaction between support functions, individual business units and country organisations.

The Executive Committee has 19 members, including the members of the Executive Board.

# Management remuneration and remuneration policy

The Board of Directors has adopted a remuneration policy that was approved by the general meeting most recently in March 2011. The principles of the Group's remuneration policy reflect its objectives of good corporate governance and sustained, long-term value creation for shareholders. The Board of Directors is responsible for amending the policy, if required, and for submitting amended versions of the policy to the general meeting for approval.

Members of the Board of Directors receive a fixed fee. They are not covered by incentive programmes and do not receive performance-based compensation. The remuneration of the Board of Directors is subject to the approval of the general meeting. The Board of Directors determines the Executive Board's remuneration, which consists of a fixed salary, various types of performance-based compensation and pension contributions. If members of the Board of Directors and the Executive Board hold directorships in Danske Bank subsidiaries, fees for such directorships are deducted from their fixed contractual salaries.

On the basis of guidelines issued by the EBA, the rules on financial sector remuneration in Denmark in the Danish Financial Business Act have become more strict. Subsidiaries outside Denmark must also comply with stricter rules as a result of the implementation of the EBA guidelines in national legislation. Consequently, the Group must comply with new remuneration rules and more extensive disclosure requirements regarding the remuneration of the Board of Directors, the Executive Board and other risk takers.

The rules for the remuneration of the Board of Directors, the Executive Board and risk takers entail placing limits on the size of performance-based compensation and deferring the payment of

part of such remuneration. Recipients may lose part or all of their deferred remuneration, depending on future results.

Including the Board of Directors and the Executive Board members registered by the Danish Business Authority, the Group has identified 158 persons as material risk takers for 2011.

The general meeting held in March 2011 approved two incentive programmes:

- An incentive programme for the Executive Board, with the possibility of performancebased compensation of up to 20% of the fixed salary. Shares account for 50% of performancebased compensation, and 75% is deferred and subject to further performance targets.
- An incentive programme for selected specialists and managers (about 700 participants), with the possibility of performance-based compensation of up to three months' salary.

Because Danske Bank raised hybrid capital from the Danish state, the members of the Board of Directors and the Executive Board may not receive remuneration based on share options.

In line with international and Danish recommendations, staff members in control functions do not receive performance-based compensation.

In compliance with the rules for reporting remuneration practices, the Group has issued a special report outlining the principles for remuneration of staff covered by the new rules. The report is available in the Corporate Governance section of the Group's website.

Note 9 of the consolidated financial statements provides individual remuneration and salary

details for the members of the Board of Directors and the Executive Board.

# Internal control and risk management systems in financial reporting

As laid down in the Danish Financial Business Act, the Board of Directors is responsible for ensuring that the Executive Board maintains effective procedures to identify, monitor and report risks and uphold adequate control procedures as well as satisfactory IT controls and security measures. The division of responsibilities between the Board of Directors and the Executive Board is outlined above.

The Executive Board regularly assesses and adjusts the internal control and risk management systems used in the financial reporting process to maintain a high level of reporting.

The key elements of good accounting practices are well-defined authorisations, a segregation of duties, regular reporting and transparency regarding the Group's circumstances. The shared IT platform helps provide the documentation of accounting data across the Group and reduce financial reporting risks.

Group Finance regularly assesses financial reporting risks, with particular attention to items where estimates and assessments may have a material effect on the value of assets and liabilities. The note on critical accounting policies and estimates lists these items.

The Executive Board has implemented controls to eliminate financial reporting risks that have been identified and regularly monitors changes in and compliance with relevant legislation and other financial reporting regulations. The purpose of the controls is to prevent, detect and correct reporting errors and irregularities. Although controls reduce

the risk, they provide no guarantee against such errors and irregularities.

The Group has a well-established procedure of daily and monthly reporting, including deviation reports for the individual organisational levels. Internal management reporting is based on the same principles as external reporting, and local and central units use the same data and reporting systems. Group Finance reviews the reports and uses them to prepare the consolidated financial statements to be submitted to the Executive Board.

The Group has an internal audit department (Internal Audit). This department reports to the Board of Directors and regularly reviews internal management reporting and external reporting (interim and annual reports). Internal Audit also performs operational audits, focusing on key areas of the Group's risk management procedures, including risk reporting.

The Executive Board regularly reports to the Board of Directors and its committees on compliance with the risk and investment framework set out and with statutory investment rules. The Board of Directors also receives accounting information on an ongoing basis. Group Compliance and Internal Audit regularly submit reports to the Board of Directors on compliance with rules and regulations, including any violation of internal business procedures and policies. Once a year, Internal Audit submits a report to the Audit Committee with information about the effectiveness of financial reporting and risk management processes.

The Group's www.danskebank.com/CGreport site gives a complete overview of compliance with the recommendations of the Danish Committee on Corporate Governance and provides more information about corporate governance.

# CORPORATE RESPONSIBILITY

# > DREAM ON

The online game Dream On was launched in Denmark and Norway in 2011.

In the current environment of worldwide financial unrest and instability, Corporate Responsibility [CR] remains a central part of the Danske Bank Group's long-term strategy for its contribution to society.

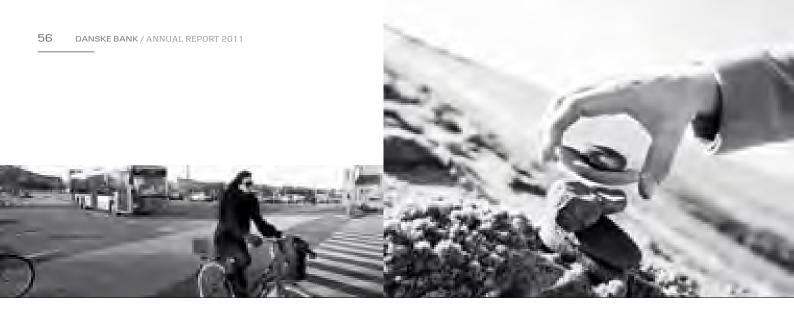

# Financial literacy for young people

Since 2007, the Group has been developing personal finance learning activities for children and young people. The first four initiatives under the Group's Financial Literacy and Education Investment programme have been a great success, with more than six million games played in the Danish version of the Moneyville online universe. The number of games played in the non-Danish versions since their launch totals more than two million. In 2011, the Group expanded the programme with the Dream On game for young people aged 15 to 17, and the programme now offers initiatives for children and young people aged 5 to 27. With the Dream On game, the Group continued its practice of collaborating extensively with learning experts, game developers, psychologists and others to develop the games. The players must make financial decisions and carry out virtual actions that determine whether they can realise their dreams or must dream on about a financially secure future. In 2012, Dream On will also be launched at other of the Group's business units.

The Group will continue to promote its financial literacy initiatives in the years ahead.

# CR governance

In 2011, the Group updated its code of conduct and merged it with its ethical guidelines. As was the case with previous policies, the new code of

conduct applies to all employees and describes the Group's ethical guidelines for customer relations, employee behaviour, anti-corruption measures and bribery. The code of conduct also reflects the latest updates to the UK Bribery Act. It has been approved by the Board of Directors and is available to staff on the Group's intranet and to the public at www.danskebank.com.

### Whistleblower system

The Group wants to establish and maintain an environment that encourages a free flow of information and provides security and protection from reprisals for staff who report suspicious activity.

Reports and questions received through the whistleblower system are treated confidentially and are passed on to the Group chief auditor, the Group general counsel and the Board of Directors' Audit Committee.

To increase transparency in the handling of irregularities, in 2011, the Group began disclosing the number of reports and questions received through the whistleblower system. In 2011, three matters were reported through the whistleblower system. They resulted in two warnings and one dismissal.

# Socially responsible investing

Since 2008, the Group has had a Socially Responsible Investment (SRI) policy to ensure that it does not invest customer funds in businesses that do not comply with international guidelines on human rights, employee rights, the environment, weapons and anti-corruption.

In 2011, the SRI screening process resulted in the exclusion of a few businesses from the

Group's investment universe, while others made improvements that enabled them to be included in the investment universe again.

### Responsible sourcing

Since 2006, the Group has required selected suppliers and product groups to comply with specific environmental criteria. In 2010, the requirements were expanded to include a new purchasing policy according to which the Group assesses the environmental, ethical and social risks related to suppliers. In 2011, the Group began implementing the policy with a comprehensive risk assessment of suppliers. By the end of the year, 429 of the suppliers managed through the purchasing department had been subjected to risk assessment.

In 2012, the Group will carry out further screenings and initiate dialogues with high-risk suppliers according to the plan prepared in 2010.

### Women in management

Since the Group signed the Danish government's Charter for More Women in Management, it has committed itself to making an effort to appoint more female managers. The first activity related to the charter was a report prepared in 2010. It showed that the proportion of female managers in the Group was 35%, while women made up 57% of the entire staff. In the report, the Group set the goal of lifting the proportion of female managers to 36% in 2012 and 37% in 2015, partly by ensuring a sufficient number of female candidates in the recruitment process. The Group has therefore set goals for the proportion of female managers in its talent development programmes and the proportion of female successors for management positions. By the end of 2011, the Group had already reached the goal of 36%.

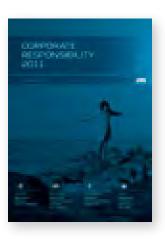

# **CR** reporting

The Group is publishing Corporate Responsibility 2011 at the same time as Annual Report 2011. All relevant CR data for the Group is available in CR Fact Book 2011, which is published together with Corporate Responsibility 2011.

The UN Global Compact is the largest voluntary network for corporate responsibility in the world. It is based on ten universally accepted principles for human rights, employee rights, the environment and anti-corruption. Since 2007, as a Global Compact participant, the Group has committed itself to reporting how it endeavours to fulfil the ten principles every year. The Group fulfils its reporting obligations to the Danish FSA by referring to the annual progress report submitted to the UN, Communication on Progress, which is available at www.unglobalcompact.org.

The Group's CR reporting complies with the Sustainability Reporting Guidelines issued by the Global Reporting Initiative (GRI). A GRI Index matching the ten universal Global Compact principles is available at www.danskebank.com/responsibility. Also, as part of its increased efforts on socially responsible investing, the Group, for the first time, has reported on the extent to which it complies with the UN Principles for Responsible Investment and has described the implementation of the principles in its investment processes.

# STATEMENT OF CAPITAL - DANSKE BANK GROUP

[DKK millions]	2011	2010
Earnings per share		
Net profit for the year	1,712	3,661
Number of shares issued at 1 January	698,804,276	698,804,276
Average number of own shares held by the Group	6,115,822	7,271,671
Average number of shares outstanding prior to capital increase	692,688,454	691,532,605
Average number of shares issued through capital increase	171,669,726	-
Bonus element of rights issue in capital increase, number of shares	14,823,492	56,360,151
Adjusted average number of shares outstanding after capital increase	879,181,672	747,892,756
Number of dilutive shares issued for share-based payments	-	-
Adjusted average number of shares outstanding after capital increase, including dilutive shares	879,181,672	747,892,756
Earnings per share (DKK)	1.9	4.9
Diluted earnings per share (DKK)	1.9	4.9

Earnings per share and diluted earnings per share have been divided by a factor of 1.0807 to reflect the share capital increase in April 2011.

The share capital consists of shares of a nominal value of DKK 10 each. All shares carry the same rights; there is thus only one class of shares.

The Board of Directors is authorised to let Danske Bank acquire own shares up to a total nominal amount of 10% of Danske Bank's share capital. The shares may be held for ownership or provided as collateral. If shares are acquired for ownership, the acquisition price may not deviate by more than 10% from the price quoted at the time of acquisition.

#### Note

#### 1 Critical accounting policies and estimates

The Danske Bank Group prepares its consolidated financial statements in accordance with the International Financial Reporting Standards (IFRSs), issued by the International Accounting Standards Board (IASB), as adopted by the EU. Note 45 presents the Group's significant accounting policies

Management's estimates and assumptions of future events that will significantly affect the carrying amounts of assets and liabilities underlie the preparation of the consolidated financial statements. The estimates and assumptions that are deemed critical to the consolidated financial statements are

- the fair value measurement of financial instruments
- the measurement of loans and advances
- the measurement of goodwill
- the measurement of liabilities under insurance contracts
- the measurement of the net obligation for defined benefit pension plans
- the recognition of deferred tax assets

The estimates and assumptions are based on premises that management finds reasonable but which are inherently uncertain and unpredictable. The premises may be incomplete, unexpected future events or situations may occur, and other parties may arrive at other estimated values.

### Fair value measurement of financial instruments

Critical estimates are not required to measure the fair value of financial instruments based on prices quoted in an active market or based on generally accepted models employing observable market data.

Measurements of financial instruments that are only to a limited extent based on observable market data, such as the measurement of unlisted shares and certain bonds for which there is no active market, are subject to estimates. The estimated fair value of illiquid bonds significantly depends on the credit spread estimate. If the credit spread widens 50bp, the fair value of the bonds will decrease DKK 3 million. The sections on determination of fair value in notes 45 and 43 provide more details. At end-2011, financial instruments measured on the basis of non-observable input accounted for around 0.7% of total assets.

### Measurement of loans and advances

The Group makes impairment charges to account for any impairment of loans and advances that occurs after initial recognition. Impairment charges consist of individual and collective charges and rely on a number of estimates, including identification of loans or portfolios of loans with objective evidence of impairment, expected future cash flows and the value of collateral. The Group determines the need for impairment charges on the basis of the customer's expected ability to repay the debt. This ability depends on a number of factors, including the customer's earnings capacity and trends in general economic growth and unemployment. Expectations of deteriorating repayment ability reduce credit quality and lead to downgrading of the customer.

If all customers were downgraded one rating category, collective impairment charges would increase by about DKK 5.0 billion. The losses incurred under non-performing loan agreements depend, among other factors, on the value of collateral received. If the value of collateral decreased 10%, individual impairment charges would increase by about DKK 3.4 billion. The notes on risk management provide more details on impairment charges for loans and advances. At end-2011, loans and advances accounted for around 54% of total assets.

#### Measurement of goodwill

Goodwill on acquisition is tested for impairment once a year or more frequently if indications of impairment exist. Impairment testing requires management to estimate future cash flows from acquired units. A number of factors affect the value of such cash flows, including discount rates, changes in the real economy, customer behaviour and competition. Goodwill is particularly sensitive to changes in impairment test assumptions about the normalised long-term return. If this return is lowered 20%, goodwill will decrease DKK 0.3 billion. Note 23 provides more information about impairment testing and sensitivity to changes in impairment test assumptions. At end-2011, goodwill amounted to DKK 18.6 billion, or less than 1% of total assets.

#### Measurement of liabilities under insurance contracts

The calculation of liabilities under insurance contracts is based on a number of actuarial computations that rely on a number of estimates, including mortality and disability estimates. Estimates are based on data from the Group's own portfolio of insurance contracts. The liabilities also depend on the discount yield curve, which is fixed on the basis of a zero-coupon yield curve estimated on the basis of euro swap market rates to which is added the yield spread between Danish and German government bonds and a mortgage yield curve spread. At the end of 2011, the yield spread was calculated as a 12-month moving average, reducing life insurance provisions by DKK 2.8 billion. The notes on risk management contain a sensitivity analysis. At end-2011, liabilities under insurance contracts accounted for less than 8% of total liabilities.

# Measurement of the net obligation for defined benefit pension plans

The calculation of the net obligation is based on computations made by external actuaries. These computations rely on assumptions about a number of variables, including discount and mortality rates and salary increases. The application of the corridor method to defined benefit pension plans limits fluctuations in reported figures that arise as a result of changes in actuarial assumptions, unless changes are caused by plan adjustments. The measurement of the net obligation for defined benefit plans is particularly sensitive to changes in the discount rate. If the discount rate is lowered one percentage point, the net obligation will increase by DKK 2.5 billion. Most of the increase, DKK 2.0 billion, does not exceed the corridor method's threshold values, while the remainder, DKK 0.5 billion, will be expensed over the next ten years. Note 35 provides details on the assumptions, and the section on pension risk in the notes on risk management contains a sensitivity analysis. At end-2011, the net pension obligation accounted for less than 0.01% of total liabilities.

 $<sup>^{\</sup>star}$  Liabilities under insurance contracts are recognised at the present value of expected insurance benefits.

<sup>\*\*</sup>The interest rate risk on fixed-rate financial assets and liabilities is hedged by derivatives (fair value hedging). The interest rate risk on fixed-rate bonds available for sale is also hedged by derivatives.

#### Note

#### Recognition of deferred tax assets

(cont'd) Deferred tax assets arising from unused tax losses are recognised to the extent that such losses can be offset against tax on future profit. Recognition of deferred tax assets requires management to assess the probability and amount of future taxable profit at units with unused tax losses. At end-2011, deferred tax assets stood at DKK 1.4 billion, or 0.04% of total assets. The tax base of unrecognised tax loss carry-forwards, primarily relating to the Group's banking operations in Ireland, amounted to DKK 1.7 billion. Note 29 provides more information about deferred tax

### Financial instruments - general

Financial instruments account for more than 95% of total assets and liabilities.

Purchases and sales of financial instruments are measured at fair value at the settlement date.

#### Classification

At initial recognition, a financial asset is assigned to one of the following five categories:

- Trading portfolio measured at fair value
- Loans and advances measured at amortised cost
- Held-to-maturity investments measured at amortised cost
- Financial assets designated at fair value through profit or loss
- Available-for-sale financial assets measured at fair value through other comprehensive income

At initial recognition, a financial liability is assigned to one of the following three categories:

- Trading portfolio measured at fair value
- Financial liabilities designated at fair value through profit or loss
- Other financial liabilities measured at amortised cost

#### Trading portfolio

The trading portfolio includes financial assets and liabilities acquired or undertaken by the Group for sale or repurchase in the near term. The trading portfolio also contains collectively managed financial assets and liabilities for which a pattern of short-term profit taking exists. Derivatives, including bifurcated embedded derivatives, form part of the trading portfolio.

Fair value option – financial assets and liabilities designated at fair value through profit or loss

# Loans at fair value and bonds issued by Realkredit

Loans granted under Danish mortgage finance law are funded by issuing listed mortgage bonds with matching terms. Borrowers may repay such loans by delivering the underlying bonds. The Group buys and sells own bonds issued by Realkredit Danmark on an ongoing basis because such securities play an important role in the Danish money market. If these loans and bonds were measured at amortised cost, the purchase and sale of own bonds would result in timing differences in the recognition of gains and losses.

Consequently, the Group measures loans and issued bonds at fair value in accordance with the fair value option offered by IAS 39 to ensure that neither gain nor loss will occur on the purchase of own bonds.

#### Other financial assets designated at fair value

Other financial assets designated at fair value include securities that are not classified as trading portfolio assets. These securities do not form part of the trading portfolio because no pattern of short-term profit taking exists, but they are still managed on a fair value basis. This category includes financial assets under insurance contracts, bonds quoted in an active market and shares that are not part of the trading portfolio.

Realised and unrealised capital gains and losses and dividends are carried in the income statement under Net trading income. The financial assets are recognised in the balance sheet under Investment securities and Assets under insurance contracts

#### Available-for-sale financial assets

Available-for-sale financial assets consist of bonds which, although traded in an active market at the time of acquisition, the Group intends neither to sell in the near term nor to hold to maturity.

#### Hedge accounting

The Group uses derivatives to hedge the interest rate risk on fixed-rate assets and fixed-rate liabilities measured at amortised cost, except for held-to-maturity investments and available-for-sale financial assets. Hedged risks that meet the criteria for fair value hedge accounting are treated accordingly. The interest rate risk on the hedged assets and liabilities is measured at fair value through profit or loss. At end-2011, hedging derivatives measured at fair value accounted for around 1.1% of total assets and around 0.4% of total liabilities.

If the hedge criteria cease to be met, the accumulated value adjustments of the hedged items are amortised over the term to maturity.

#### Note

# 1 Future adjustments to the measurement of financial (cont'd) instruments

In October 2010, the IASB reissued IFRS 9, Financial Instruments. The aim of the overall reissuance project is, once the amendments to IFRS 9 are completed, to let the standard replace IAS 39 in its entirety. IFRS 9 now provides principles for classification and derecognition of financial instruments. Principles for impairment and hedge accounting are expected to follow in 2012 or 2013.

The transitional rules of the amended IFRS 9 prescribe implementation of the standard by 2015. The EU has decided to postpone adoption of the amended IFRS 9 until the details of the entire standard are known. The Group does not expect the amended IFRS 9 to materially affect the measurement of its financial instruments.

In December 2011, the IASB clarified its IAS 32 requirements for offsetting financial instruments. The clarification is expected to increase the offsetting of positive and negative fair values of derivatives.

Note 45, Significant accounting policies, describes IFRS 9 and the clarification of IAS 32 in more detail.

#### Insurance activities - general

The Group's net income from insurance business comprises the return on assets funded by Danica Pension's shareholders' equity, the income from unit-linked business and the health and accident business, and a risk allowance for conventional life insurance. The risk allowance is determined in accordance with the Danish FSA's executive order on the contribution principle. If the technical basis for the conventional life insurance business for a given period is insufficient to allow booking of the risk allowance, the amount may be booked in later periods when the technical basis permits. Insurance contracts guarantee a certain long-term return on policyholders' funds. If the technical basis exceeds the interest accrual to policyholders and the risk allowance, the difference is allocated to the bonus potential. The bonus potential serves as a risk buffer. If the technical basis is insufficient to cover the interest accrual to policyholders, the shortfall is covered by the bonus potential. If the bonus potential is insufficient to cover the shortfall, the difference is paid by the Group. Similarly to the booking of the risk allowance, amounts paid by the Group are booked to the shadow account and may be recovered at a later date when the technical basis permits.

Life insurance policies are divided into insurance and investment contracts. Insurance contracts are contracts that entail significant insurance risks or entitle policyholders to bonuses. Investment contracts are contracts that entail no significant insurance risk and comprise unit-linked contracts under which the investment risk lies with the policyholder.

#### Insurance contracts

Insurance contracts comprise both an investment element and an insurance element, which are recognised as aggregate figures.

Life insurance provisions are recognised at their present value under Liabilities under insurance contracts.

Assets earmarked for insurance contracts are recognised under Assets under insurance contracts if most of the return on the assets accrues to the policyholders. Most of these assets are measured at fair value.

Insurance premiums are recognised under Net premiums. Net insurance benefits consists of benefits disbursed under insurance contracts and the annual change in insurance obligations not deriving from additional provisions for benefit guarantees. The return on earmarked assets is allocated to the relevant items in the income statement. The return to policyholders is recognised under Net trading income as are changes to additional provisions for benefit guarantees.

#### Investment contracts

Investment contracts are recognised as financial liabilities, and, consequently, contributions and benefits under such contracts are recognised directly in the balance sheet as adjustments of liabilities. Deposits are measured at the value of the savings under Deposits under pooled schemes and unit-linked investment contracts.

Savings under unit-linked investment contracts are measured at fair value under Assets under pooled schemes and unit-linked investment contracts. The return on the assets and the crediting of the amounts to policyholders' accounts are recognised under Net trading income.

#### Assets funded by shareholders' equity

The separate pool of assets equal to shareholders' equity is recognised at fair value and consolidated with the other assets of the Group.

## Financial highlights

As shown in note 2 on business segments, the financial highlights deviate from the corresponding figures in the consolidated financial statements.

Income from the Danske Markets segment is recognised in the consolidated income statement under Net trading income and Net interest income, but is recognised in the financial highlights as a total under Net trading income. Net income from insurance business is presented on a single line in the financial highlights.

#### Note

#### 2 Business segmentation and business model

The Danske Bank Group is Denmark's leading financial services provider and one of the largest in the Nordic region. The Group offers customers a wide range of services in the fields of banking, mortgage finance, insurance, real-estate brokerage, asset management and trading in fixed income products, foreign exchange and equities.

Danske Bank is an international retail bank operating in 15 countries, mainly in the Nordic region. Danske Bank is market leader in Denmark, among the largest banks in Northern Ireland and Finland and a market challenger in Sweden, Norway, Ireland and the Baltics.

Danica Pension carries out the Group's activities in the life insurance and pensions markets.

The Group consists of a number of business units and support functions. The Group's activities are segmented into business units in accordance with legislative requirements and by product and service characteristics.

Banking Activities comprises the Group's retail banking units and Corporate & Institutional Banking (CIB) operations. The retail banking units serve all types of personal customers, small and medium-sized enterprises, and private banking customers, who are served at the finance centres. Mortgage finance operations in Denmark are carried out through Realkredit Danmark. Real-estate brokerage is handled by the home, Skandia Mäklarna and Fokus Krogsveen real-estate agency chains. The results of the Group's mortgage finance operations and real-estate brokerage are included in the banking unit figures.

The CIB units serve the largest and most complex companies in the Nordic countries (pension funds, insurance companies and other financial institutions) and multinational companies with significant banking business in the Nordic countries. CIB products and services comprise lending, financial instruments for risk management and investment purposes, cash management services, advisory services on mergers and acquisitions, and assistance with equity and debt issues in the international financial markets. This two-tier structure of local, specialised CIB units and retail units applies to the Nordic markets.

Danske Markets is responsible for the Group's activities in the financial markets. Trading activities include trading in fixed-income products, foreign exchange and equities. Group Treasury is responsible for the Group's strategic fixed-income, foreign exchange and equity portfolios and serves as the Group's internal bank. Institutional banking covers facilities with international financial institutions outside the Nordic region. Facilities with Nordic financial institutions are part of Banking Activities.

Danske Capital develops and sells asset and wealth management products and services, which are marketed through the banking units and directly to businesses, institutional clients and external distributors. Danske Capital also supports the advisory and asset management activities of the banking units. Through Danske Bank International in Luxembourg, Danske Capital provides international private banking services to customers outside the Group's home markets. Danske Capital operates in Denmark, Sweden, Norway, Finland, Estonia, Lithuania and Luxembourg.

Danica Pension carries out the Group's activities in the life insurance and pensions market. Danica Pension serves both personal and business customers. Its products are marketed through a range of distribution channels within the Group, primarily banking units and Danica Pension's own insurance brokers and advisers. Danica Pension offers two market-based products: Danica Balance and Danica Link. These products allow customers to select their own investment profiles, and the return on savings depends on market trends. Danica Pension also offers Danica Traditionel. This product does not offer individual investment profiles, and Danica Pension sets the rate of interest on policyholders' savings.

Other Activities consists of the Group's real property activities, expenses for the Group's support functions, and eliminations, including the elimination of returns on own shares

Capital is allocated to the individual business units on the basis of the unit's share of the Group's average risk-weighted assets calculated prior to the transition to the Capital Requirements Directive. Insurance companies are subject to special statutory capital requirements. Consequently, capital is allocated to the insurance business in compliance with these statutory requirements.

A calculated income equal to the risk-free return on its allocated capital is apportioned to each business unit. This income is calculated on the basis of the short-term money market rate.

Expenses are allocated to the business units at market price level. Other Activities supplies services to business units, and transactions are settled at unit prices or on an arm's-length basis; if possible, on the basis of consumption and activity.

Assets and liabilities used for the operating activities of a business unit are presented in the financial statements of that unit

In its financial highlights, the Group recognises earnings contributed by Danske Markets as net trading income and earnings contributed by Danica Pension as net income from insurance business. Other income includes earnings contributed by fully consolidated subsidiaries taken over by the Group under non-performing loan agreements and held for sale. The Reclassification column shows the adjustments made to the detailed figures in the calculation of the highlights. The number of full-time equivalent staff does not include about 1,100 employees of fully consolidated subsidiaries taken over by the Group under non-performing loan agreements and held for sale.

Internal income and expenses are allocated to the individual segments on an arm's-length basis. The funding costs for lending and deposit activities are allocated on the basis of a maturity analysis of loans and deposits, interbank rates and funding spreads and depend on financial market trends. The Group changed its allocation of funding costs at 1 January 2011 to better reflect the rise in funding costs and the duration of loans and deposits. The change affects only the allocation between segments and the highlights.

Business banking comprises interest and fee income from transactions with business customers. Home finance and savings comprises interest and fee income from financing and savings products. Trading comprises income from fixed-income and foreign exchange products, including brokerage. Day-to-day banking comprises income from personal banking products in the form of personal loans, cards and deposits. Wealth management comprises income from the management of assets, including pooled assets and assets in unit trusts. Leasing encompasses income from both finance and operating leases sold by the Group's leasing operations. Insurance comprises income from Danica Pension and insurance services sold to customers through the banking units.

In accordance with IFRSs, the Danske Bank Group is required to disclose business with a single customer that generates 10% or more of total income. The Group has no such customers.

#### Geographical segmentation

Income from external customers is broken down by the customer's country of residence, except trading income, which is broken down by the country in which the activities are carried out. Assets (intangible assets, investment property, tangible assets and holdings in associates) are broken down by their location. Goodwill is allocated to the country in which the activities are carried out.

The geographical segmentation of income and assets is shown in compliance with IFRSs and does not reflect the Group's management structure. Management believes that the business segmentation provides a more informative description of the Group's activities.

Since 1 January 2011, Corporate & Institutional Banking (CIB) has served the largest corporate customers and institutional clients, previously served by the Group's Nordic units, and provided corporate finance services previously offered by Danske Markets. The transfer of the corporate finance activities also involves the reallocation of annual income of about DKK 200 million and annual expenses of about DKK 150 million. Comparative figures have been restated.

Danske Bank's directors receive fixed remuneration only and are not covered by the Group's incentive programmes. Directors also receive a fee for board committee membership.

The Board of Directors is remunerated by the Parent Company, Danske Bank A/S. No director has received remuneration for membership of the executive board or board of directors in one or more of the Group's subsidiaries.

The Group has no pension obligations towards the Board of Directors.

Note	(DKK millions)					2011	2010

	Total earned	12.4	7.6	7.7	8.0	7.7	7.3
	Total paid	11.5	7.5	6.9	7.5	6.9	7.4

Total paid comprises contractual remuneration and contributions to defined contribution pension plans for 2011 and the exercise of rights to conditional shares for 2007 (granted in 2008). The variable remuneration for 2011 will be paid in a later financial year.

In accordance with the Group's general staff polices, Henrik Ramlau-Hansen received a 25-year anniversary benefit, equal to one month's salary.

The Executive Board received a total remuneration of DKK 50.7 million for 2011, with fixed remuneration amounting to DKK 46.9 million and variable remuneration amounting to DKK 3.8 million. The Executive Board's contracts comply with the statutory requirements for agreements on variable remuneration in financial institutions in force since 1 January 2011.

Peter Straarup, Chairman of the Executive Board, has decided to retire and will be replaced by Eivind Kolding on 15 February 2012. Per Skovhus will resign no later than 1 July 2012.

2010	Peter Straarup	Tonny Thierry Andersen	Thomas F. Borgen	Sven Lystbæk	Georg Schubiger	Per Skovhus
Contractual remuneration	7.1	4.9	4.9	5.2	1.2	4.7
Pension	2.1	0.7	0.7	3.2	0.2	0.7
Variable cash payment	-	-	-	-	-	-
Variable share-based payment	-	-	-	-	-	-
Total earned	9.2	5.6	5.6	8.4	1.4	5.4

The fixed remuneration of the Executive Board totalled DKK 35.6 million for 2010.

Georg Schubiger joined the Executive Board on 1 October 2010, and Henrik Ramlau-Hansen joined the Executive Board on 1 January 2011. The contractual remunerations and pensions relate to the period since the dates when Mr Schubiger and Mr Ramlau-Hansen joined the Executive Board. Sven Lystbæk retired from the Executive Board on 31 December 2010.

The remuneration of the Executive Board includes remuneration for membership of the board of directors of one or more of the Group's subsidiaries. For such membership, Peter Straarup received remuneration of DKK 248,000 for 2011 (2010: DKK 240,000), Tonny Thierry Andersen received remuneration of DKK 173,000 for 2011 (2010: DKK 120,000), and Georg Schubiger received remuneration of DKK 113,000 for 2011 (2010: DKK 0). Remuneration for directorships in Group undertakings is deducted from the contractual remuneration received from Danske Bank A/S.

Under the Danish Act on State-Funded Capital Injections into Credit Institutions, only 50% of management's salaries is tax deductible until the capital raised has been repaid. In 2011, this deduction amounted to DKK 24 million (2010: DKK 18 million).

The pension obligation to Peter Straarup is covered by the "Danske Bank A/S' pensionsfond for medlemmer af direktionen, deres enker og efterladte børn" pension fund. Danske Bank A/S is liable for any shortfall. The obligations are determined on the basis of actuarial computations and a number of assumptions (note 35 provides additional information). Therefore, changes in the pension obligation cannot reasonably be added to the annual remuneration.

#### Remuneration of other material risk takers

Since 1 January 2011, the Group has complied with new statutory requirements to identify a number of employees other than the members of the Executive Board who have material influence on the Group's risk profile. The remuneration of these employees has been aligned with the statutory rules on variable remuneration.

For 2011, a total of 140 persons were designated as material risk takers and combined they received remuneration of DKK 377 million, with fixed remuneration amounting to DKK 245 million and variable remuneration amounting to DKK 132 million. Of the above remuneration for 2011, the Parent Company, Danske Bank A/S, paid DKK 329 million to 113 material risk takers, with fixed remuneration amounting to DKK 204 million and variable remuneration amounting to DKK 125 million. As the Group started to designate material risk takers in 2011, comparative figures for 2010 are not stated.

The Group's pension obligations towards other material risk takers amounted to DKK 54 million at year-end 2011.

#### Shareholdings

(co

The number of Danske Bank shares, excluding options and rights to buy conditional shares, held by the Board of Directors and the Executive Board at 31 December 2011 totalled 160,700 and 144,787, respectively (31 December 2010: 132,731 and 74,345). Note 42, Danske Bank shares held by the Board of Directors and the Executive Board, provides additional details.

#### Share-based payment

Until 2008, the Group offered senior staff and selected employees incentive programmes that consisted of share options and rights to conditional shares. Incentive payments reflected individual performance and also depended on financial results and other measures of value creation for a given year. Options and rights were granted in the first quarter of the year following the year in which they were earned

Following the expiry of Bank Package 1, the Group has granted rights to conditional shares to staff at Danske Markets and Danske Capital in 2010 and 2011 and to the Executive Board and selected managers and specialists in 2011. The grant is part of the variable remuneration and complies with international guidelines.

Issued options carry a right to buy Danske Bank shares exercisable from three to seven years after they are granted provided that the employee, with the exception of retirement, has not resigned from the Group. The exercise price of the options is computed as the average price of Danske Bank shares for 20 stock exchange days after the release of the annual report plus 10%.

### Note

9 Rights to Danske Bank shares under the conditional share programme vest up to five years after being granted provided that the em-(cont'd) ployee, with the exception of retirement, has not resigned from the Group. In addition to this requirement, rights to shares earned in 2010 and 2011 vest only if the Group as a whole and the employee's department meet certain performance targets within the next five years.

The fair value of the share options is calculated according to a dividend-adjusted Black & Scholes formula. Calculation of the fair value at the end of 2011 is based on the following assumptions: Share price: 73 (2010: 143). Dividend payout ratio: 2.5% (2010: 1.5%). Rate of interest: 0.8-0.9% (2010: 1.2-1.8%), equal to the swap rate. Volatility: 50% (2010: 35%). Average time of exercise: 0-2 years (2010: 0-2 years). The volatility estimate is based on historical volatility.

The fair value of the conditional shares is calculated as the share price less the payment made by the employee.

The intrinsic value is expensed in the year in which the share options and rights to conditional shares are earned, while the time value is accrued over the remaining service period, which is the vesting period of up to five years. Shareholders' equity will increase correspondingly as the obligation is met by settlement in Danske Bank shares.

#### Note

#### 16 Derivatives

(cont'd) The Group's activities in the financial markets include trading in derivatives. Derivatives are financial instruments whose value depends on the value of an underlying instrument or index, etc. Derivatives can be used to manage market risk exposure, for example.
The Group trades a considerable volume of the most commonly used interest rate, currency and equity derivatives, including

- swaps
- forwards and futures
- options

Furthermore, the Group trades a limited number of swaps whose value depends on developments in specific credit or commodity risks, or inflation indices.

The Group trades derivatives for three main purposes: First, customers are offered derivatives as individual transactions or as integral parts of other services, such as the issuance of bonds with yields that depend on developments in equity or currency indices. Second, the Group trades derivatives in its own trading portfolio. Third, derivatives are used for managing the Group's own exposure to foreign exchange, interest rate, equity market and credit risks. The risk management notes provide additional information about the Group's risk management policy. Danske Markets is responsible for managing and hedging the Group's market risks.

Derivatives are recognised and measured at fair value. Interest on some of the Group's bank loans, advances, deposits, issued bonds, etc. is added at fixed rates. Generally, such fixed-rate items are carried at amortised cost. In accordance with general accounting standards, the fair value of the interest rate risk on fixed-rate loans, for example, is not included in the income statement as opposed to changes in the fair value of hedging derivatives. In addition, the Group classifies certain bonds as available-for-sale financial assets. Unrealised value adjustments of such bonds are recognised in Other comprehensive income. The Group uses fair value hedge accounting if the interest rate risk on fixed-rate financial assets and liabilities or bonds available for sale is hedged by derivatives.

#### Fair value hedge accounting

The interest rate risk on fixed-rate assets and liabilities with terms longer than six months is generally hedged by derivatives. The interest rate risk on fixed-rate loans and advances extended by the Group's operations in Finland, Northern Ireland and Ireland is, however, hedged by core free funds. Any interest rate risk not hedged by core free funds is hedged by derivatives.

For hedged assets and liabilities to which a fixed rate of interest applies for a specified period of time starting at the commencement date of the agreement, future interest payments are divided into basic interest and a profit margin and into periods of time. By entering into swaps or forwards with matching payment profiles in the same currencies and for the same periods, the Group hedges the risk from the commencement date. The fair values of the hedged interest rate risk and the hedging derivatives are measured at frequent intervals to ensure that changes in the fair value of the hedged interest rate risk lie within a band of 80-125% of the changes in the fair value of the hedging derivatives. Portfolios of hedging derivatives are adjusted if necessary.

With effective hedging, the hedged interest rate risk on hedged assets and liabilities is measured at fair value and recognised as a value adjustment of the hedged items. Value adjustments are carried in the income statement under Net trading income. Any ineffective portion of a hedge that lies within the range for effective hedging is therefore also included under Net trading income.

At the end of 2011, the carrying amounts of effectively hedged fixed-rate financial assets and liabilities were DKK 68,815 million (31 December 2010: DKK 71,074 million) and DKK 676,546 million (31 December 2010: DKK 798,713 million), respectively. The table below shows the value adjustments of these assets and liabilities and the hedging derivatives. The value adjustments are recognised in the income statement as Net trading income.

The Group hedges the foreign exchange risk of net investments in branches and subsidiaries outside Denmark by establishing financing arrangements in the matching currencies. The Group does not hedge these units' expected financial results or other future transactions. The foreign exchange adjustments of the investments are recognised in Other comprehensive income together with the foreign exchange adjustments of the financing arrangements designated as hedging of exchange rate fluctuations. The statement of comprehensive income shows the translation amounts. At the end of 2011, the carrying amount of financial liabilities used to hedge net investments in units outside Denmark amounted to DKK 50,329 million (31 December 2010: DKK 48,103 million).

#### Bonds held for trading reclassified as available-for-sale financial assets

Owing to significant distortion of the pricing of bonds, in 2008, the Group reclassified bonds at a nominal value of DKK 120,607 million and a fair value of DKK 116,722 million in the held-for-trading category as available-for-sale financial assets. The portfolio of available-for-sale assets comprises primarily Danish mortgage bonds and foreign covered bonds. Some 95% of the portfolio is rated AA or higher, while the remaining portfolio has investment grade ratings. The portfolio did not include any government bonds issued by Ireland, Portugal, Italy, Greece or Spain. At the end of 2011, the fair value of the bonds in the portfolio was DKK 70,460 million (31 December 2010: DKK 89,485 million). In 2011, the Group recognised unrealised value adjustments of the reclassified bonds in the amount of DKK 735 million in the income statement, corresponding to the part of the interest rate risk that is hedged by derivatives (2010: DKK 44 million). The Group recognised unrealised value adjustments of DKK -951 million (2010: DKK -145 million) in Other comprehensive income that would have been recognised in the income statement if the reclassification had not taken place. From 2009 onwards, the distortion has diminished, and the Group has sold part of its portfolio. For the part of the portfolio sold in 2011, the Group realised value adjustments of DKK 28 million (2010: DKK 44 million) that were transferred from Other comprehensive income to the income statement. The Group recognised interest income of DKK 1,884 million (2010: DKK 1,961 million) on the reclassified bonds.

#### Held-to-maturity financial assets

Held-to-maturity financial assets consists of bonds with quoted prices in an active market held for the purpose of generating a return until maturity. The bonds, primarily government bonds and government-guaranteed bonds, are measured at amortised cost. The portfolio did not include any government bonds issued by Ireland, Portugal, Italy, Greece or Spain.

	Fair value adjustment of block issues and pre-issued bonds	-	-
	Holding of own mortgage bonds	376,401	384,434
	Total	557,699	555,486

Loans provided by Realkredit Danmark and bonds issued by Realkredit Danmark are measured at fair value using the fair value option. The accounting policies in note 45 provide additional information.

The holding of own mortgage bonds includes pre-issued bonds of DKK 179 billion (2010: DKK 213 billion) to be used for FlexLån® refinancing in January 2012 and bonds of DKK 25 billion (2010: DKK 28 billion) recognised under Assets under insurance contracts and Assets under pooled schemes and unit-linked investment contracts.

The nominal value of bonds issued by Realkredit Danmark equals the amount to be redeemed on maturity.

Of the total fair value adjustment for the credit risk on loans at fair value, changes in 2011 accounted for DKK 236 million (2010: DKK 367million).

Fair value adjustment for the credit risk on issued mortgage bonds is calculated on the basis of the option-adjusted spread (OAS) to government bond yields or, for variable rate loans, the swap rate. The calculation incorporates maturity, nominal holdings and OAS sensitivity. As a number of estimates are made, the calculation is subject to uncertainty.

In 2011, the Danish mortgage bond yield spread widened, and the fair value of issued mortgage bonds thus decreased about DKK 4 billion. In 2010, a spread widening also caused a fair value decrease of about DKK 4 billion. In comparison with the fair value measured at the issuance of the bonds, the fair value had decreased about DKK 8 billion at the end of 2011 (2010: DKK 3 billion). The net profit and shareholders' equity remain unaffected because the spread widening increased the fair value of mortgage loans correspondingly.

Fair value adjustment for the credit risk on issued mortgage bonds may also be calculated on the basis of changes in similar AAA-rated mortgage bonds offered by other Danish issuers. The market for such bonds is characterised by an absence of measurable price differences between bonds with similar characteristics from different issuers. Using this method, no fair value adjustment for credit risk in 2010 or the period since the issue has been required.

The Group has holdings in two investment companies in which Danica Pension and the Danske Bank Group together hold more than 20% of the capital. Danica's holdings are recognised at fair value under Assets under insurance contracts. The Group's other holdings are also recognised at fair value under Trading portfolio assets. Because the investment companies invest solely in securities recognised at fair value, the carrying amount deviates only slightly from the fair value. The table below shows the Group's holdings in these companies at the end of 2011:

Other intangible assets were recognised at the acquisition of the Sampo Bank group in 2007 and include mainly contractual rights of DKK 6 million (2010: DKK 75 million) and rights to names of DKK 463 million (2010: DKK 465 million). Contractual rights are amortised over 1-5 years. Rights to names relate to the use of the Sampo Bank brand name. In management's opinion, the right to use the name has an indefinite useful life, as the name is well-established. Rights to names are therefore not amortised but subject to annual impairment testing.

In 2011, the Group expensed DKK 2,132 million (2010: DKK 2,128 million) for development projects.

At the end of July 2009, the Group acquired the Swedish facility management group Addici Holding AB. The Group is the primary banker of the Addici group, which was acquired at no cost due to its financial situation. With effect from July 2010, the consolidation of Addici was changed from consolidation in accordance with the rules for assets held for sale to full consolidation as the company has not been sold. Goodwill on the acquisition totalled DKK 388 million. The Group still intends to sell the company.

#### Note (DKK millions)

#### 23 Impairment testing

(cont'd) The Group's goodwill and rights to names with indefinite useful lives are tested for impairment once a year by testing at the level of identifiable cash-generating units to which goodwill and rights to names have been allocated.

Since 1 January 2011, the Corporate & Institutional Banking segment has been presented separately from the Group's other banking activities in the Nordic countries. The Group has therefore reallocated acquired goodwill among Retail Banking Finland, Corporate & Institutional Banking, and Danske Markets and Treasury on the basis of each business unit's value. The changes are recorded under Additions.

The impairment test conducted in 2011 did not result in impairment charges against goodwill and rights to names. The Group had to increase impairment charges against businesses taken over by DKK 161 million, however, because of declining sales prices for businesses. The impairment test conducted in 2010 did not result in impairment charges against goodwill and rights to names either.

	1 Jan. 2010 Goodwill and rights to names	Additions	Foreign currency translation	31 Dec. 2010 Goodwill and rights to names	Additions	Impairment charges	Foreign currency translation	31 Dec. 2011 Goodwill and rights to names

Others	130	388	10	528	5	161	-4	368
Total	18,713	388	135	19,236	5	161	14	19,094

Impairment tests compare the carrying amount and the estimated present value of expected future cash flows. The special debt structure of financial institutions requires the use of a simplified equity model to calculate the present value of future cash flows. The model is based on approved strategies and earnings estimates for cash-generating units for the next five years (the budget period). The estimated earnings from the end of the budget period are projected on the basis of the expected development in a number of macroeconomic variables until earnings normalise. This is expected no later than in year ten (the normalisation period). For the terminal period, growth estimates are determined on the basis of forecasts of real GDP growth for the relevant markets. The estimated cash flows are discounted at the Group's risk-adjusted required rates of return of 12% (pre-tax rate) and 9% (post-tax rate). Cash flow estimates factor in entity-specific uncertainties.

The difficult market conditions for the Group's banking units continued. Low money market rates kept earnings at a low level, and the Northern Ireland banking unit recorded large loan losses. The Group expects a period of modest growth and low money market rates before economies will normalise. Normalised interest rate levels are expected to increase net profit. If the economies do not normalise as expected, or future regulations increase costs more than expected, intangible assets may be impaired. Owing to the expectations for the budget period, around 61% of the net present value of future cash flows is expected to be generated in the terminal period (2010: 70%).

Small changes in assumptions may require impairment charges against the goodwill allocated to Banking Activities Baltics and Banking Activities Northern Ireland. If the Group's risk-adjusted required rate of return is lifted from 12% to 13%, total goodwill allocated to the Group's banking activities, including retail banking units and Corporate & Institutional Banking, will decline around DKK 0.4 billion (2010: a decline of DKK 0.4 billion). Total goodwill allocated to the Group's banking activities is robust against a one percentage point lowering of growth estimates for the terminal period (2010: no im- pact). If the normalised return for the terminal period is lowered 10% or 20%, however, goodwill will decrease by DKK 0.1 billion and DKK 0.3 billion. The corresponding effect on goodwill for 2010 was no impact and DKK 0.8 billion. Moreover, total goodwill allocated to the Group's banking activities is robust against a one percentage point increase in the assumed tier 1 capital requirement (2010: no impact).

The goodwill allocated to Danske Markets is robust against changes to both the required rate of return and growth estimates for the terminal period. For Danske Capital, the required rate of return may increase by up to 2.2 percentage points before impairment occurs (2010: 1.1 percentage point), and the goodwill recognised is robust against changes in growth estimates for the terminal period.

#### Retail Banking Finland (Sampo Pankki)

In 2007, Danske Bank acquired the shares of the Sampo Bank group. The activities of the Sampo Bank group were incorporated into the business structure of the Danske Bank Group at the beginning of 2007 and are reported under Banking Activities Finland. With the acquisition, the Group strengthened its competitive position in the entire northern European market. In 2008, Banking Activities Finland migrated to the Group's platform. At the beginning of 2011, Corporate & Institutional Banking was separated from Banking Activities Finland, resulting in reallocation of goodwill. At the same time, the name was changed to Retail Banking Finland.

#### Corporate & Institutional Banking (CIB)

CIB was established as a separate unit at the beginning of 2011, resulting in reallocation of goodwill to the unit.

#### Banking Activities Baltics

In 2007, Danske Bank acquired the Baltic activities of the Sampo Bank group. The activities were incorporated into the business structure of the Danske Bank Group at the beginning of 2007 and are reported under Banking Activities Baltics. With the acquisition, the Group established a presence in the Baltic markets, primarily in Estonia and, although to a lesser extent, in Lithuania. The Group's operations in Latvia are very modest. The Group recognised goodwill impairment charges against the banking units in Latvia and Lithuania in 2009, reflecting the economic crisis in the Baltic countries. Only the goodwill allocated to the Estonian operations remains capitalised.

### Banking Activities Northern Ireland (Northern Bank)

In 2005, Danske Bank acquired Northern Bank, which forms part of Banking Activities Northern Ireland. The acquisition is consistent with the Group's strategy of strengthening its competitive position in the northern European market. The launch of new product packages and other services supports Northern Bank's position as a leading retail bank in the highly competitive Northern Ireland market.

#### Danske Markets and Treasury

The trading activities of Sampo Bank were incorporated into the business structure of Danske Markets and Treasury in 2007. With the acquisition, the Group strengthened its competitive position within trading activities. The integration process and the budgets and business plans presented confirm the financial assumptions on which the Group based its acquisition.

### Danske Capital

The wealth management activities of Sampo Bank were incorporated into the business structure of Danske Capital in 2007. In addition to the acquisition of Sampo Bank, goodwill recognised by Danske Capital is attributable to a number of minor acquisitions. With the acquisition of Sampo Bank, the Group strengthened its competitive position within asset management in Finland.

Note	[DKK millions]	2011	2010
24	Investment property		
	Fair value at 1 January	4,799	4,948
	Additions	382	360

	Disposals	577	530
	Fair value adjustment	20	21
	Fair value at 31 December	4,624	4,799
	Required rate of return used for calculating fair value	4.5-9.0	4.8-8.0
	Average required rate of return	6.6	6.8

Rental income from investment property totalled DKK 318 million (2010: DKK 333 million). Expenses directly attributable to investment property generating rental income amounted to DKK 40 million (2010: DKK 38 million), whereas expenses directly attributable to investment property not generating rental income amounted to DKK 8 million (2010: DKK 5 million).

Investment property under insurance contracts		
Fair value at 1 January	18,165	17,757
Additions	242	448
Property improvement expenditure	248	329
Disposals	160	10
Fair value adjustment	169	-359
Fair value at 31 December	18,664	18,165
Required rate of return used for calculating fair value	4.5-8.0	4.5-8.5
Average required rate of return	6.0	6.1

Rental income from investment property under insurance contracts amounted to DKK 1,197 million (2010: DKK 1,184 million). Expenses directly attributable to investment property generating rental income amounted to DKK 370 million (2010: DKK 360 million).

In 2011, the Group started to use discounted cash flows as the basis for calculating the fair value of investment property under insurance contracts. The use of discounted cash flows provides a more accurate calculation of the risks associated with vacancies and expected cash flows. The new method reduced the value of properties by DKK 30 million. The Group did not change its return requirement.

At the end of 2011, the fair value of domicile property was DKK 4,993 million (31 December 2010: DKK 4,941 million). The required rate of return of 6.6% (2010: 6.8%) was determined in accordance with Danish FSA rules.

Furthermore, Assets under insurance contracts includes domicile property of DKK 429 million (2010: DKK 433 million) and machinery, furniture and fixtures of DKK 0 million (2010: DKK 0 million). At the end of 2011, the fair value of such domicile property was DKK 450 million (31 December 2010: DKK 449 million).

	Total	18,634	24,442

Real property taken over, held for sale, comprises properties in Denmark of a carrying amount of DKK 317 million (2010: DKK 282 million) and properties in other countries of a carrying amount of DKK 128 million (2010: DKK 126 million). The properties were taken over by the Group under non-performing loan agreements, and the Group expects to sell the properties through a real-estate agent within twelve months from the date of acquisition. The fair value of real property taken over is reduced by the estimated costs of selling the property. Other amounts due includes DKK 165 million relating to assets of companies taken over by the Group under non-performing loan agreements and held for sale.

The Group issues a number of irrevocable loan commitments and guarantees, etc. Such exposures are valued at the higher of the received premium amortised over the life of the individual obligation and the provision made, if any. Provisions are made if it is likely that drawings will be made under a loan commitment or claims will be made under a guarantee and the amount payable can be reliably measured. Obligations are recognised at the present value of expected payments.

Irrevocable loan commitments included obligations towards the Private Contingency Association of DKK 0 billion (2010: DKK 3.3 billion).

Reserves in early series subject to a reimbursement obligation relate to mortgage loan agreements under which the individual borrower's share of the series reserve fund is disbursed to the borrower on repayment of the loan in accordance with the terms and conditions applying to the series. Until 2031, the Group's obligation will gradually be reduced in step with individual borrower repayments. Factors that affect repayment patterns include changes in interest rates and the agreed repayment schedule.

Government-guaranteed bonds mature in 2012 and amounted to DKK 36.4 billion.

### Note (DKK millions)

### 32 Subordinated debt

Subordinated debt consists of liabilities in the form of subordinated loan capital and hybrid capital that, in the event of Danske Bank's voluntary or compulsory winding-up, will not be repaid until the claims of ordinary creditors have been met. Hybrid capital ranks below subordinated loan capital. Early redemption of subordinated debt must be approved by the Danish FSA.

Subordinated debt is included in the capital base in accordance with section 128 of the Danish Financial Business Act and applicable executive orders.

#### Note

- 32 a Optional redemption from March 2012. If the loan is not redeemed, the annual interest rate will be 2.07 percentage [cont'd] points above 3-month EURIBOR.
  - b Optional redemption from June 2013. If the loan is not redeemed, the annual interest rate will be 2.05 percentage points above 3-month EURIBOR.
  - c Optional redemption from September 2018. If the loan is not redeemed, the annual interest rate will be 1.94 percentage points above 3-month GBP LIBOR.
  - d Optional redemption from March 2015. If the loan is not redeemed, the annual interest rate will be 1.81 percentage points above 3-month EURIBOR.
  - e Optional redemption from March 2013. If the loan is not redeemed, the annual interest rate will be 2.95 percentage points above 3-month EURIBOR.
  - Optional redemption from June 2014. If the loan is not redeemed, the annual interest rate will be 1.66 percentage points above 3-month USD LIBOR.
  - Optional redemption from March 2017. If the loan is not redeemed, the annual interest rate will be 1.44 percentage points above 3-month GBP LIBOR.
  - h Optional redemption from February 2017. If the loan is not redeemed, the annual interest rate will be 1.70 percentage points above 3-month GBP LIBOR.
  - Optional redemption from May 2017. If the loan is not redeemed, the annual interest rate will be 1.62 percentage points above 3-month EURIBOR.
  - Interest is paid at an annual rate 0.65 of a percentage point above 3-month STIBOR. Optional redemption from February 2017. If the loan is not redeemed, the annual interest rate will be 1.65 percentage points above 3-month STIBOR.
  - k Optional redemption from August 2017. If the loan is not redeemed, the annual interest rate will be 1.65 percentage points above 3-month STIBOR.
  - Optional redemption from March 2014. If the loan is not redeemed, the annual interest rate will be 2.15 percentage points above 3-month EURIBOR. The loan is included in the Group's capital base as tier 2 capital.
  - m Interest is paid at an annual rate 1.6 percentage points above 3-month EURIBOR. Optional redemption from December 2010. The loan is included in the Group's capital base as tier 2 capital.
  - n Interest is paid at an annual rate 0.3 of a percentage point above TEC 10. Optional redemption from March 2014. The loan is included in the Group's capital base as tier 2 capital.
  - Interest is paid at an annual rate of 9.265 percentage points with an annual premium of 0.5 of a percentage point for the conversion option. If Danske Bank makes annual dividend payouts exceeding DKK 4.9 billion, the interest rate will increase. Unless otherwise agreed, Danske Bank may not redeem the loan earlier than 11 April 2014. From 11 April 2014 to 10 May 2014, Danske Bank may redeem the loan at a price of 100 provided that the tier 1 capital ratio is at least 12% following such redemption or that the loan is replaced by other loss-absorbing tier 1 capital of at least the same or a higher quality. From 11 May 2014 to 10 May 2015, Danske Bank may redeem the loan at a price of 105, and from 11 May 2015, Danske Bank may redeem the loan at a price of 110. Redemption must be approved by the Danish FSA. Until 14 May 2014, Danske Bank will have the option to gradually convert the loan capital into shares in Danske Bank A/S if the hybrid capital exceeds 35% of tier 1 capital. Danske Bank must, however, gradually convert the loan capital into share capital in the same period if the hybrid capital exceeds 50% of tier 1 capital. The conversion must be made at market price. At the end of 2011, the hybrid capital accounted for 27.3% of tier 1 capital.
  - p Interest is paid at an annual rate of 9.265 percentage points. If Realkredit Danmark makes annual dividend payouts exceeding DKK 2.1billion, the interest rate will increase. Unless otherwise agreed, Realkredit Danmark may not redeem the loan earlier than 11 May 2012. From 11 May 2012 to 10 May 2014, Realkredit Danmark may redeem the loan at a price of 100 provided that the tier 1 capital ratio is at least 12% following such redemption or that the loan is replaced by other loss-absorbing tier 1 capital of at least the same or a higher quality. From 11 May 2014 to 10 May 2015, Realkredit Danmark may redeem the loan at a price of 105, and from 11 May 2015, Realkredit Danmark may redeem the loan at a price of 110. Redemption must be approved by the Danish FSA.

The maturity analysis is based on the earliest date on which the Group can be required to pay.

Total

Disclosures comprise agreed payments, including principal and interest. For liabilities with variable cash flows, for example variablerate financial liabilities, disclosure is based on the contractual conditions at the balance sheet date. Derivatives disclosures include the contractual cash flows for all derivatives, irrespective of whether the fair value at the balance sheet date is negative or positive and whether derivatives are held for trading or hedging purposes.

Amounts for other issued bonds and subordinated debt are included at the date when the Danske Bank Group has a choice of redeeming the debt or paying interest at a higher rate.

Usually, deposits are contractually very short-term funding, but in practice they are considered a stable funding source, as amounts disbursed largely equal deposits received. A number of irrevocable loan commitments and guarantees expire without being utilised. Loan commitments and guarantees are included on the basis of the contractual expiry date. To take account of potential drawings under irrevocable loan commitments, the Group factors in the effect of the unutilised portion of the facilities in the calculation of liquidity risk.

A significant number of the Group's pension plans are defined contribution plans under which the Group makes contributions to insurance companies, including Danica Pension. Such payments are expensed when made. Defined benefit plans are typically funded by ordinary contributions made by employers and employees to separate pension funds investing the contributions on behalf of the members to fund future pension obligations. The Group also has unfunded pension plans, which are recognised directly in the balance sheet.

Defined benefit plans in Northern Ireland and Ireland account for most of the Group's obligations under such plans. The defined benefit plans in these countries do not accept new members, and pension obligations are funded through pension funds. For the plan in Ireland, contributions payable by existing members were discontinued on 1 January 2011. All employees are now covered by a plan combining defined benefit and defined contribution elements.

Pensions in payment, including spouses' and children's benefits in Northern Ireland and Ireland, are reviewed annually by the Group and the trustee boards of the plans, and discretion is exercised as to the level of increases awarded.

In Denmark, most employees have defined contribution plans. Defined benefit plans for employees working in Denmark are funded by contributions to pension funds, the majority of which are regulated by Danish company pension funds law. Most of these plans do not accept new members, and most of them are in payment.

In Sweden, the defined benefit plan accepts new members. The plan is funded through a pension fund, with an upper limit on the salary level on the basis of which pension obligations accumulate.

The Group's defined benefit plans are computed on the basis of external actuarial calculations, and actuarial gains and losses are recognised using the corridor method. The actuarial calculations show an unrecognised net pension asset of DKK 387 million at 31 December 2011 (31 December 2010: a net pension liability of DKK 39 million).

The net pension assets and obligations of the individual pension funds are recognised under Other assets and Other liabilities, respectively.

The Group's obligations under defined benefit plans are recognised on the basis of actuarial calculations of the present value of the estimated benefits. The table below shows the assumptions for calculating the present value of the individual plans on 31 December 2011.

Average actuarial assumptions (%)	2011	2010
Discount rate	4.7	5.2
Return on plan assets	4.8	5.8
Inflation rate	2.7	2.9
Salary adjustment rate	3.6	3.8
Pension adjustment rate	2.9	3.0

The expected return on plan assets is calculated on the basis of the asset mix at the beginning of the year and long-term expectations for the return on the various asset types.

The mortality assumptions used for recognising pension obligations at the end of 2011 are based on the Group's own FT09 mortality table for pension obligations in Denmark and the FFFS2007:31 standard table for pension obligations in Sweden. The Northern Ireland and Ireland mortality rates are based on the 00 series of mortality tables for annuitants and pensioners produced by the British Institute and Faculty of Actuaries. The mortality tables are adjusted to reflect general trends in the mortality rates of populations and general data on portfolios of insured persons. Life expectancies of persons insured at 31 December 2011 were 86.6 years for men and 88.4 years for women (60-year-olds), and 86.8 years for men and 88.6 years for women (65-year-olds). The corresponding figures for 2010 were 86.4 years for men and 88.3 years for women (60-year-olds), and 86.7 years for men and 88.4 years for men and 88.6 years for men and 88.7 years for men and 88.9 ye

Transactions with related pension funds comprised loans and advances in the amount of DKK 9 million (2010: DKK 9 million), deposits in the amount of DKK 152 million (2010: DKK 134 million), issued bonds worth DKK 507 million (2010: DKK 530 million), derivatives with a positive fair value of DKK 19 million (2010: DKK 40 million), derivatives with a negative fair value of DKK 1,425 million (2010: DKK 621 million), interest expenses of DKK 21 million (2010: DKK 20 million), fee income of DKK 1 million (2010: DKK 1 million), and pension contributions of DKK 423 million (2010: DKK 774 million).

36	Risk-weighted assets	2011	2010
	Credit risk (IRB approach)	494,989	457,548
	Credit risk (standardised approach)	213,382	218,106
	Counterparty risk	44,508	37,246
	Total credit risk	752,879	712,900
	Market risk	63,686	43,284
	Operational risk	89,414	88,025
	Total	905,979	844,209

The total capital and tier 1 capital ratios are calculated in accordance with the Capital Requirements Directive. Risk-weighted assets calculated under the Basel I rules amounted to DKK 1,414,566 million at 31 December 2011 (31 December 2010: DKK 1,359,397 million). The solvency need, calculated on the basis of the transitional rules, was DKK 90,532 million, equal to 80% of the capital requirement of 8% of risk-weighted assets (31 December 2010: DKK 87,001 million).

Risk Management 2011 provides more details about the Group's solvency need. Risk Management 2011 is not covered by the statutory audit.

### 37 Contingent liabilities

The Group uses a variety of loan-related financial instruments to meet customers' financial requirements. Instruments include loan offers and other credit facilities, guarantees and instruments not recognised in the balance sheet.

Guarantees		
Financial guarantees	12,123	12,061
Mortgage finance guarantees	1,537	3,001
Other guarantees	69,471	75,228
Total	83,131	90,290
Other county work Nativities		
Other contingent liabilities		
Irrevocable loan commitments shorter than 1 year	63,013	61,551
Irrevocable loan commitments longer than $ 1 $ year $$	106,459	109,407
Other unutilised loan commitments	942	852
Total	170,414	171,810

In addition to credit exposure from lending activities, the Group has made loan offers and granted revocable credit facilities in the amount of DKK 355 billion (31 December 2010: DKK 396 billion). These items are included in the calculation of risk-weighted assets in accordance with the Capital Requirements Directive.

Owing to its business volume, the Danske Bank Group is continually a party to various lawsuits and disputes. In view of its size, the Group does not expect the outcomes of pending lawsuits and disputes to have any material effect on its financial position.

A limited number of employees are employed under terms which grant them, if they are dismissed before reaching their normal retirement age, an extraordinary severance and/or pension payment in excess of their entitlement under ordinary terms of employment. As the sponsoring employer, the Group is also liable for the pension obligations of a number of company pension funds.

Through participation in the Danish Guarantee Fund for Depositors and Investors, Danish banks undertake to cover the losses incurred by the Fund from the resolution of distressed banks. Danske Bank's share is just over one third of any loss incurred by the Fund.

The Group is the lessee in a number of non-cancellable operating leases, involving mainly leasing of real property, equipment, furniture and fixtures. The Group recognises lease payments as an expense over the lease term but does not recognise the operating lease assets in its balance sheet. Such assets are recognised by lessors. Note 40 provides more information about the present value of lease payments under non-cancellable operating leases.

#### Note

#### 38 Repo and reverse transactions

In repo transactions, which involve selling securities to be repurchased at a later date, the securities remain in the balance sheet, and the amounts received are recognised as deposits. At the end of 2011, the fair value of such securities totalled DKK 267,924 million [31 December 2010: DKK 190,174 million]. Counterparties are entitled to sell the securities or deposit them as collateral for loans.

In reverse transactions, which involve buying securities to be resold at a later date, the Group is entitled to sell the securities or deposit them as collateral for loans. The securities are not recognised in the balance sheet, and amounts paid are carried as loans. At the end of 2011, the fair value of reverse transaction securities was DKK 254,423 million (2010: DKK 301,980 million), of which securities sold or deposited as collateral totalled DKK 163,851 million (31 December 2010: DKK 159,450 million).

### 39 Assets deposited as collateral

At the end of 2011, the Group had deposited securities worth DKK 50,674 million as collateral with Danish and international clearing centres and other institutions (31 December 2010: DKK 59,949 million).

At the end of 2011, the Group had provided cash and securities worth DKK 71,249 million as collateral for derivatives transactions (31 December 2010: DKK 40,655 million).

The Group had registered assets under insurance contracts worth DKK 278,858 million as collateral for the savings of policyholders at the end of 2011 [31 December 2010: DKK 269,957 million].

The Group had registered loans at fair value worth DKK 720,741 million and other assets worth DKK 0 million as collateral for bonds issued by Realkredit Danmark, including mortgage-covered bonds, at the end of 2011 (31 December 2010: DKK 701,715 million and DKK 0 million, respectively).

At the end of 2011, the Group had registered loans and advances worth DKK 198,760 million and other assets worth DKK 8,108 million as collateral for covered bonds issued under Danish and Finnish law (31 December 2010: DKK 138,610 million and DKK 5,126 million, respectively).

Note (DKK millions)	2011	2010
---------------------	------	------

#### 40 Leasing

#### The Group as lessor

The Group offers fleet management, truck leasing, IT leasing, machinery leasing (such as agricultural machinery), and real property leasing under both finance and operating leases.

#### Payments due under finance leases

Loans and advances included payments due under finance leases of DKK 23,735 million at the end of 2011 (31 December 2010: DKK 25,888 million).

Finance leases		
At 1 January	25,888	27,938
Additions	6,311	5,613
Disposals	8,511	8,548
Foreign currency translation	47	885
At 31 December	23,735	25,888
Finance leases expiring		
within 1 year	3,766	4,829
in 1-5 years	14,548	15,058
after 5 years	5,421	6,001
Total	23,735	25,888
Gross investment in finance leases expiring		
within 1 year	5,393	6,377
in 1-5 years	17,551	18,189

Total	29,705	32,126
Unearned finance income	5,970	6,238
Unguaranteed residual value	3,346	1,540

Impairment charges for finance leases amounted to DKK 862 million at the end of 2011 (31 December 2010: DKK 1,096 million). Interest income on variable-rate leases amounted to DKK 629 million (2010: DKK 608 million).

### Payments due under operating leases

The Group recognises assets leased under operating leases as tangible assets (lease assets), investment property and investment property under insurance contracts. The table below breaks down minimum lease payments by lease term.

Operating leases expiring		
within 1 year	1,846	1,911
in 1-5 years	2,467	2,381
after 5 years	479	698
Total	4,792	4,990

Interest income on variable-rate leases amounted to DKK 92 million (2010: DKK 132 million).

#### The Group as lessee

The Group is the lessee in a number of operating leases. Under such leases, the Group is entitled to use an asset for a specified period of time against lease payments, but it does not take over the major risks associated with the asset nor does it benefit from any returns. The leases involve mainly leasing of real property, equipment, furniture and fixtures and are not recognised in the Group's balance sheet. The table below breaks down minimum lease payments by lease term.

Operating leases expiring		
within 1 year	589	571
in 1-5 years	1,579	1,539
after 5 years	1,327	1,217
Total	3,495	3,327

Staff costs and administrative expenses includes lease payments in the amount of DKK 695 million (2010: DKK 435 million). Interest expenses on variable-rate leases amounted to DKK 0 million (2010: DKK 0 million).

In 2011, the Group did not enter into finance leases as lessee.

Related parties with significant influence include shareholders with holdings exceeding 20% of Danske Bank A/S's share capital. The A.P. Moller and Chastine Mc-Kinney Møller Foundation and companies of the A.P. Moller – Maersk Group, Copenhagen, hold 22.84% of the share capital. Note 22 lists holdings in associates. The Board of Directors and Executive Board columns list the personal facilities, deposits, etc. held by members of the Board of Directors and the Executive Board and their dependants and facilities with businesses in which these parties have a controlling or significant influence.

In 2011, the average interest rates on credit facilities granted to members of the Board of Directors and the Executive Board were 2.9% (2010: 2.7%) and 3.0% (2010: 3.4%), respectively. Notes 9 and 42 specify the remuneration and shareholdings of management.

Pension funds set up for the purpose of paying out pension benefits to employees of the Danske Bank Group are also considered related parties. Note 35 specifies transactions with such pension funds.

Danske Bank A/S acts as the bank of a number of its related parties. Payment services, trading in securities and other instruments, investment and placement of surplus liquidity, and provision of short- and long-term financing are the primary services provided by Danske Bank A/S.

Danica Pension manages the pension plans of a number of related parties, and Danske Capital manages the assets of a number of the Group's pension funds.

The figures above do not include debt to related parties in the form of issued notes. Such notes are bearer securities, which means that the Group does not know the identity of the holders. Danske Bank shares may be registered by name. Related parties' holdings of Danske Bank shares equalling 5% or more of Danske Bank's share capital are determined on the basis of the most recent reporting of holdings to Danske Bank.

Transactions with related parties are settled on an arm's-length basis.

Under the Danish Securities Trading Act, the acquisition and sale of Danske Bank shares by members of the Board of Directors and the Executive Board and related parties must be reported to the Danish FSA and be publicly disclosed when transactions exceed EUR 5,000 per calendar year. Danske Bank discloses all additions, disposals and total holdings of members of the Board of Directors and the Executive Board and related parties.

#### Note (DKK millions)

#### 43 Fair value information for financial instruments

Financial instruments are carried in the balance sheet at fair value or amortised cost. The Group breaks down its financial instruments by valuation method (note 1 provides additional information).

#### Financial instruments at fair value

The fair value is the amount for which a financial asset can be exchanged between knowledgeable, willing parties. If an active market exists, the Group uses the quoted price. If a financial instrument is quoted in a market that is not active, the Group bases its measurement on the most recent transaction price. Adjustment is made for subsequent changes in market conditions, for instance, by including transactions in similar financial instruments that are assumed to be motivated by normal business considerations. For a number of financial assets and liabilities, no market exists. In such cases, the Group uses recent transactions in similar instruments and discounted cash flows or other generally accepted estimation and valuation techniques based on market conditions at the balance sheet date to calculate an estimated value.

In 2011, the global debt crisis had a significant impact on the bond markets, causing a shift towards safer bond investments. Price and demand changed considerably as the market perception of safe bond investments changed throughout the year. It can be difficult to distinguish between sales of bonds between market makers and investors forced to close their positions and normal transactions that are representative of a market and can be used for valuation purposes. In addition to quoted prices, values depend on observable market prices for similar instruments, if available, and models based on observable input that are designed to calculate the value of financial instruments not traded in an active market. These models incorporate swap rates, credit spreads and effective interest rate forecasts.

Generally, the Group applies valuation techniques to OTC derivatives, unlisted trading portfolio assets and liabilities, and unlisted investment securities. The most frequently used valuation and estimation techniques include the pricing of transactions with future settlement and swap models that apply present value calculations, credit pricing models and options models, such as Black & Scholes models. In most cases, values are based substantially on observable input. The valuation of unlisted shares and certain derivatives is based substantially on non-observable input. The value of derivatives, primarily long-term contracts, is therefore extrapolated on the basis of observable yield curves. Also, some credit derivatives are valued on the basis of observable input as well as assumptions about the probability of default (recovery rate).

As part of the Group's control environment, valuation models are validated by units that are independent of the business units that develop the models and trade in the products covered by the models. Validation is made to test the implementation, quality and operating stability of models to ensure that the models can be used for pricing and risk management of financial products.

Validation does not prevent errors and irregularities from occurring. For this reason, the Group has established guidelines to quantify the model risk on a number of derivatives. The Group calculates and monitors the model reserve on an ongoing basis.

The valuation of derivatives includes amortisation of the value of initial margins over the remaining term of the transaction. At 31 December 2011, the value of unamortised initial margins was DKK 1,103 million (31 December 2010: DKK 914 million).

	2011	2010
Unamortised initial margins at 1 January	914	873
Amortised during the year	-121	-94
Initial margins on new derivatives contracts	456	375
Terminated derivatives contracts	-146	-240
Unamortised initial margins at 31 December	1,103	914

Loans at fair value (mortgage loans) and bonds issued by Realkredit Danmark are recognised at the fair value of the issued bonds. The Group adjusts for changes in the fair value of the credit risk on borrowers. For loans granted to customers in rating categories 10 and 11, such adjustment is made in accordance with principles similar to those applying to individual impairment charges for loans at amortised cost. To discount amounts, the current effective interest rate is used instead of the original effective interest rate, however. A collective assessment determines the need for changes to reflect fair value adjustments of the credit risk and the market risk premium of the remaining portion of the portfolio. No changes are made if it is possible to raise the administration margin on loans (credit margin) sufficiently to offset higher credit risk and market risk premiums on mortgage loans. If it is not possible to raise the administration margin sufficiently or at all, a collective adjustment is made, reflecting trends in expected losses, unexpected losses (volatility) and the possibility of raising administration margins in the future. The expected future cash flows are discounted at the current market rate with the addition of a risk premium.

Investment securities (note 17 provides additional information) includes unlisted shares measured at fair value in accordance with the International Private Equity and Venture Capital Valuation Guidelines (IPEV). These guidelines calculate the estimated fair value of unlisted shares as the price at which an asset can be exchanged between knowledgeable, willing parties.

#### Note (DKK millions)

43 Financial instruments valued on the basis of quoted prices in an active market are recognised in the Quoted prices category. Financial [cont'd] instruments valued substantially on the basis of other observable input are recognised in the Observable input category. This category covers derivatives valued on the basis of observable yield curves or exchange rates and illiquid mortgage bonds valued by reference to the value of similar, liquid bonds. Other financial instruments are recognised in the Non-observable input category. This category covers unlisted shares and derivatives, and valuation relies on extrapolation of yield curves, correlations or other model input of material importance to valuation.

Developments in the financial markets resulted in reclassification of bonds between the Quoted prices and Observable input categories

	Quoted	Observable	Non-observable	
2011	prices	input	input	Total

At 31 December 2011, financial instruments valued on the basis of non-observable input comprised unlisted shares of DKK 7,658 million (31 December 2010: DKK 5,942 million), illiquid bonds of DKK 151 million (31 December 2010: DKK 1,157 million) and derivatives with a net market value of DKK -1,255 million [31 December 2010: DKK -718 million]. A 10% increase or decrease in the fair value of unlisted bonds would amount to DKK 766 million (2010: DKK 597 million), with DKK 473 million (2010: DKK 325 million) relating to shares allocated to policyholders, who assume most of the risk on the shares. The estimated fair value of illiquid bonds significantly depends on the estimated credit spread.

#### Note (DKK millions)

If the credit spread widens 50bp, fair value will decrease DKK 3 million (2010: DKK 28 million). If the credit spread narrows 50bp, [cont'd] fair value will increase DKK 3 million (2010: DKK 28 million). A substantial number of derivatives valued on the basis of non-observable input are hedged by similar derivatives or are used for hedging the credit risk on bonds also valued on the basis of non-observable input.

In 2011, the Group recognised unrealised value adjustments of unlisted shares and credit bonds valued on the basis of non-observable input of DKK 778 million (31 December 2010: DKK 593 million). Holdings in Nets Holding A/S accounted for DKK 373 million of the amount. In 2010, the Group recognised a capital gain of DKK 659 million related to the merger of PBS A/S and Nordito AS. The capital gain was recognised under Profit on sale of associates and group undertakings as the continuing company is no longer treated as an associate.

#### Financial instruments at amortised cost

The vast majority of amounts due to the Group, loans, advances, and deposits may not be assigned without the consent of customers, and an active market does not exist for such financial instruments. Consequently, the Group bases its fair value estimates on data showing changes in market conditions after the initial recognition of the individual instrument and affecting the price that would have been fixed if the terms had been agreed at the balance sheet date. Other parties may arrive at other estimated values. The Group discloses information about the fair value of financial instruments recognised at amortised cost on the basis of the following assumptions:

- The Group uses quoted market prices, if available. Quoted prices exist only for a very small number of loans and advances, certain
  investment securities, issued bonds and subordinated debt. If quoted prices are not available, the value is approximated to reflect
  the price that would have been fixed had the terms been agreed at the balance sheet date. Such adjustment is described below.
- For a significant number of the Group's deposits, loans and advances, the interest rate depends on the standard variable rate
  fixed by the Group. The rate is adjusted only upon certain changes in market conditions. Such deposits, loans and advances are
  considered to carry interest at a variable rate, as the standard variable rate fixed by the Group at any time applies to both new
  and existing arrangements.
- The interest rate risk on fixed-rate financial assets and liabilities is generally hedged by derivatives. The interest rate risk on fixed-rate loans and advances granted by the Group's units in Finland, Northern Ireland and Ireland is, however, hedged by core free funds. Any interest rate risk not hedged by core free funds is hedged by derivatives. The hedges are accounted for as fair value hedges, and value adjustments are recognised in the hedged financial instruments. Consequently, only fair value changes in fixed-rate loans in Finland, Northern Ireland and Ireland are unhedged. The recognised fair values include these unhedged changes.
- The fair value of the Group's international backup liquidity facilities and syndicated loans, etc. is estimated on the basis of the
  Group's current required rate of return on similar transactions. For issued bonds and subordinated debt, the Group uses an estimate of the current return required by the market.
- As regards other loans and advances, impairment charges are assumed to equal the fair value of the credit risk with the following adjustments:
  - The calculation of impairment charges for loans and advances subject to individual impairment is based on the most likely
    outcome. Fair value is adjusted by weighting all possible outcomes by the probability of default. For other loans and advances, impairment charges are recognised if a customer is downgraded to reflect a change in the probability of default.
  - The change in credit margins on individual risks is accounted for by adjusting fair value for the difference between the current credit premium and the credit premium demanded at the balance sheet date.
- The fair value of deposits does not include fair value adjustment reflecting changes in credit margins for own credit risk. For issued bonds and subordinated debt that are not traded in an active market, fair value includes own credit risk that is determined on the basis of observable input from own issues quoted in an active market.

### Note (DKK millions)

Fair value calculations for financial instruments recognised at amortised cost largely rely on estimates. The fair value of 97% of the (cont'd) Group's financial assets is based on models with non-observable input (2010: 97%). The corresponding figure for financial liabilities is 100% (2010: 99%).

All credit institutions and insurance companies supervised by national FSAs are subject to local statutory capital requirements. These requirements restrict intra-group facilities and dividend payouts.

Forsikringsselskabet Danica Skadeforsikringsaktieselskab af 1999 is the parent company of Danica Pension. Danica Pension is a life insurance company. Statsanstalten for Livsforsikring was privatised in 1990 to form part of Danica Pension. Under the terms of the privatisation, Danica Pension must meet policyholders' legitimate allotment expectations. This entails an obligation to allocate part of the profits to policyholders who were previously policyholders of Statsanstalten for Livsforsikring if Danica Pension's equity exceeds its statutory solvency requirement by a certain margin. The obligation to allocate the special allotment will exist as long as policies established with Statsanstalten for Livsforsikring are effective at Danica Pension. Special allotments are expensed only in years in which the specified level is reached. In addition, it is the intention not to distribute dividends for a period of at least 25 years from 1990. Paid-up capital and interest thereon may, however, be distributed.

#### General

The Danske Bank Group prepares its consolidated financial statements in accordance with the International Financial Reporting Standards (IFRSs), issued by the International Accounting Standards Board (IASB), as adopted by the EU and with applicable interpretations issued by the International Financial Reporting Interpretations Committee (IFRIC). Furthermore, the consolidated financial statements comply with the requirements for annual reports formulated by NASDAQ OMX Copenhagen and the Danish FSA's executive order No. 1306 dated 16 December 2008 on the use of IFRSs by undertakings subject to the Danish Financial Business Act.

The Group has not changed its significant accounting policies from those followed in Annual Report 2010.

Note 1 describes the Group's critical accounting policies and estimates.

### 2. Standards and interpretations not yet in force

The IASB has issued a number of amendments to IFRSs that have not yet come into force. Similarly, the IFRIC has issued a new interpretation that has not yet come into force. The sections below explain the changes that are likely to affect the Group's financial reporting.

In October 2010, the IASB reissued IFRS 9, Financial Instruments. The aim of the overall reissuance project is, once the amendments to IFRS 9 are completed, to let the standard replace IAS 39 in its entirety. IFRS 9 now provides principles for classification and derecognition of financial instruments. Principles for impairment and hedge accounting are expected to follow in 2012 or 2013.

The transitional rules of the amended IFRS 9 prescribe implementation of the standard by 2015. The EU has decided to postpone adoption of the amended IFRS 9 until the details of the entire standard are known.

Under IFRS 9, financial assets are classified on the basis of the business model adopted for managing the assets and on the basis of their contractual cash flow characteristics, including any embedded derivatives (unlike IAS 39, IFRS 9 no longer requires bifurcation). Assets held with the objective of collecting contractual cash flows that are solely payments of principal and interest are measured at amortised cost. Other assets are measured at fair value through profit or loss. Equities may be measured at fair value through Other comprehensive income, however, and satisfying certain requirements, a business may opt for fair value adjustment of its loans, advances, etc.

The principles applicable to financial liabilities are largely unchanged from IAS 39. Generally, financial liabilities are still measured at amortised cost with bifurcation of embedded derivatives not closely related to a host contract. Financial liabilities measured at fair value comprise derivatives, the trading portfolio and liabilities designated at fair value through profit or loss. Value adjustments relating to the inherent credit risk of financial liabilities designated at fair value are, however, recognised in Other comprehensive income unless this leads to an accounting mismatch.

#### Note

45 IFRS 9 incorporates the existing derecognition principles of [cont'd] IAS 39.

The Group does not expect the amended IFRS 9 to materially affect the measurement of its financial instruments, although the standard does not allow classification of bonds as available-for-sale assets. Such instruments are measured at amortised cost or fair value through profit or loss. Meaningful classification of financial instruments is not possible without information about the future parts of IFRS 9 to clarify the overall accounting effects of the standard.

The IASB ended its project on consolidation in May 2011 by issuing a number of new International Financial Reporting Standards (IFRS 10, IFRS 11 and IFRS 12) and revised standards (IAS 27 and IAS 28). With these standards, the IASB establishes a uniform definition of control to be used for determining whether an entity should be consolidated and introduces enhanced disclosure requirements for consolidated and unconsolidated entities, joint arrangements and associates. The standards, which have not yet been adopted by the EU, must be implemented in 2013 at the latest. The Group does not expect the new requirements to significantly change its consolidation of businesses.

In May 2011, the IASB issued IFRS 13, Fair Value Measurement. The standard introduces a new definition of fair value and provides guidance on how to measure fair value along with disclosure requirements for fair value. IFRS 13 applies when another standard requires fair value to be used or disclosed. The standard, which has not yet been adopted by the EU, must be implemented in 2013 at the latest. The Group does not expect IFRS 13 to significantly affect its financial results.

In June 2011, the IASB reissued IAS 19, Employee Benefits. The amended standard eliminates the option of deferring the recognition of actuarial gains and losses on defined benefit pension plans, known as the "corridor method". The present value of pension obligations and the fair value of plan assets must be recognised in the balance sheet instead. The amended standard, which has not yet been adopted by the EU, must be implemented in 2013 at the latest. At 31 December 2011, the new requirements would have increased shareholders' equity by DKK 290 million (the amount deferred under the corridor method net of tax). The effect on net profit will be immaterial as actuarial gains and losses are recognised in Other comprehensive income. Other comprehensive income and shareholders' equity items will become more volatile, though. The Statement of capital will not be affected as it is already prepared without the use of the corridor method.

In December 2011, the IASB clarified the IAS 32 requirements for offsetting financial instruments. The clarification is expected to increase the offsetting of positive and negative fair values of derivatives. The IASB also enhanced its IFRS 7 disclosure requirements to include both gross and net amounts when offsetting financial instruments and rights of set-off in the event of counterparty defaults. The changes, which have not yet been adopted by the EU, must be implemented in 2014 and 2013, respectively.

#### 3. Consolidation

#### Group undertakings

The financial statements consolidate Danske Bank A/S and group undertakings in which the Group has control over financial and operating policy decisions. Control is said to exist if Danske Bank A/S, directly or indirectly, holds more than half of the voting rights in an undertaking or otherwise has power to control management and operating policy decisions, provided that most of the return on the undertaking accrues to the Group and that the Group assumes most of the risk. Operating policy control may be exercised through agreements about the undertaking's activities. Potential voting rights exercisable at the balance sheet date are included in the assessment of whether Danske Bank A/S controls an undertaking.

The consolidated financial statements are prepared by consolidating items of the same nature and eliminating intra-group transactions, balances and trading profits and losses.

Undertakings acquired are included in the financial statements at the time of acquisition.

The net assets of such undertakings (assets, including identifiable intangible assets, less liabilities and contingent liabilities) are measured at fair value at the date of acquisition according to the acquisition method.

If the cost of acquisition (including direct transaction costs until 1 January 2010) exceeds the fair value of the net assets acquired, the excess amount is recognised as goodwill. Goodwill is recognised in the functional currency of the undertaking acquired. If the fair value of the net assets exceeds the cost of acquisition (negative goodwill), the excess amount is recognised as income at the date of acquisition. The portion of the acquisition that is attributable to noncontrolling interests does not include goodwill.

Divested undertakings are included in the financial statements until the transfer date.

#### Held-for-sale group undertakings

The assets and liabilities of undertakings that are actively marketed for sale and expected to be sold within 12 months of classification are recognised under Other assets and Other liabilities at the lower of cost and fair value less expected costs to sell.

#### Associates

Associates are businesses, other than group undertakings, in which the Group has holdings and significant but not controlling influence. The Group generally classifies businesses as associates if Danske Bank A/S, directly or indirectly, holds 20-50% of the share capital and has influence over management and operating policy decisions.

#### Note

45 Holdings are recognised at cost at the date of acquisition [cont'd] and are subsequently measured according to the equity method. The proportionate share of the net profit or loss of the individual business is included under Income from associates. The share is calculated on the basis of data from financial statements with balance sheet dates no earlier than three months before the Group's balance sheet date.

The proportionate share of the profit or loss on transactions between associates and group undertakings is eliminated

Voting rights held by the Group's insurance business are not included in the holding that determines whether or not a business is an associate. Such holdings are treated as held by a venture capital organisation and measured at fair value.

#### 4. Segment reporting

The Group consists of a number of business units and resource and support functions. The business units are segmented according to legislation and product and services characteristics. Segment reporting complies with the Group's significant accounting policies.

Inter-segment transactions are settled on an arm's-length basis. Expenses incurred centrally, including expenses incurred by support, administrative and back-office functions, are charged to the business units according to consumption and activity at calculated unit prices or market prices, if

Segment assets and liabilities are assets and liabilities that are used for maintaining the operating activities of a segment or have come into existence as a result of such activities and that are either directly attributable or may be reasonably allocated to a segment. A calculated share of shareholders' equity is allocated to each segment. Other assets and liabilities are recognised in the Other activities segment.

Liquidity expenses are allocated on the basis of a maturity analysis of loans and deposits. Prices are based on interbank rates and funding spreads.

### 5. Offsetting

Assets and liabilities are netted when the Group has a legally enforceable right to set off recognised amounts and intends either to settle the balance on a net basis or to realise the asset and settle the liability simultaneously.

### 6. Translation of transactions in foreign currency

The presentation currency of the consolidated financial statements is Danish kroner. The functional currency of each of the Group's units is the currency of the country in which the unit is domiciled, as most income and expenses are settled in the local currency.

Transactions in foreign currency are translated at the exchange rate of the unit's functional currency at the transaction date. Gains and losses on exchange rate differences between the transaction date and the settlement date are recognised in the income statement.

Monetary assets and liabilities in foreign currency are translated at the exchange rates at the balance sheet date. Exchange rate adjustments of monetary assets and liabilities arising as a result of differences in the exchange rates at the transaction date and at the balance sheet date are recognised in the income statement. Non-monetary assets and liabilities in foreign currency that are subsequently revalued at fair value are translated at the exchange rates at the date of revaluation. Exchange rate adjustments are included in the fair value adjustment of an asset or liability. Other non-monetary items in foreign currency are translated at the exchange rates at the transaction date.

#### Translation of units outside Denmark

Assets and liabilities of units outside Denmark are translated into Danish kroner at the exchange rates at the balance sheet date. Income and expenses are translated at the exchange rates at the transaction date. Gains and losses arising at the translation of net investments in units outside Denmark are recognised in Other comprehensive income. Net investments include the net assets and goodwill of the units as well as holdings in the form of subordinated loan capital. Exchange rate adjustments of financial liabilities used for hedging the Group's net investments are also recognised in Other comprehensive income.

#### BALANCE SHEET

### 7. Financial instruments - general

Purchases and sales of financial instruments are measured at fair value at the settlement date. Fair value adjustments of unsettled financial instruments are recognised from the trading date to the settlement date.

Note 1, Critical accounting policies and estimates, explains the classification of financial assets and liabilities.

### 8. Due from credit institutions and central banks

Amounts due from credit institutions and central banks comprise amounts due from other credit institutions and term deposits with central banks. Reverse transactions (purchases of securities from credit institutions and central banks that the Group agrees to resell at a later date) are recognised under Due from credit institutions and central banks.

Amounts due from credit institutions and central banks are measured at amortised cost as described under Loans and advances at amortised cost.

### 9. Trading portfolio (assets and liabilities)

Trading portfolio assets comprise the equities, bonds, loans and advances, and derivatives with positive fair value held by the Group's trading departments. Trading portfolio liabilities consist of derivatives with negative fair value and obligations to deliver securities (obligations to repurchase securities).

At initial recognition, the trading portfolio is measured at fair value, excluding transaction costs. Subsequently, the portfolio is measured at fair value through profit or loss. Realised and unrealised capital gains and losses and dividends are recognised in the income statement under Net trading income.

#### Note

#### 45 Determination of fair value

(cont'd) The fair value of financial assets and liabilities is measured on the basis of quoted market prices of financial instruments traded in active markets. The fair value of such instruments is therefore based on the most recently observed market price at the balance sheet date.

If a financial instrument is quoted in a market that is not active, the Group bases its measurement on the most recent transaction price. Adjustment is made for subsequent changes in market conditions, for instance by including transactions in similar financial instruments that are assumed to be motivated by normal business considerations.

For portfolios of assets and liabilities with offsetting market risks, the Group bases its measurement of the portfolios on mid-market prices and makes a fair value adjustment to recognise net assets at bid price and net liabilities at asking price (exit prices).

If no active market exists for standard and simple financial instruments, such as interest rate and currency swaps and unlisted bonds, fair value is calculated on the basis of generally accepted valuation techniques and market-based parameters. The fair value of more complex financial instruments, such as swaptions and interest rate caps and floors, and other OTC products is measured on the basis of internal models, many of which are based on valuation techniques generally accepted in the industry.

The results of calculations made on the basis of valuation techniques are often estimates because exact values cannot be determined from market observations. Consequently, additional parameters, such as liquidity risk and counterparty risk, are sometimes included to measure fair value.

If, at the time of acquisition, a difference arises between the value of a financial instrument calculated on the basis of non-observable input and actual cost (day-one profit or loss) and the difference is not the result of transaction costs, the Group adjusts model parameters to actual cost. Note 43 provides information about the value of resulting initial margins, which are amortised over the term of the transaction.

#### 10. Investment securities

Investment securities consists of financial assets which, under the fair value option, the Group designates at fair value through profit or loss, available-for-sale financial assets and held-to-maturity investments.

#### Financial assets at fair value

Financial assets at fair value comprises securities managed on a fair value basis but without short-term profit-taking. Realised and unrealised capital gains and losses and dividends are recognised in the income statement under Net trading income.

#### Available-for-sale financial assets

Available-for-sale financial assets consists of bonds which, although traded in an active market at the time of acquisition, the Group intends neither to sell in the near term nor to hold to maturity. Bonds treated as available-for-sale financial assets are measured at fair value at initial recognition and subsequently at fair value through Other comprehensive income. Unrealised value adjustments of hedged interest rate risks that qualify for fair value hedge accounting are, however, recognised under Net trading income. The Group recognises interest income according to the effective interest method, amortising the difference between cost and the redemption value over the term to maturity of the bonds.

If objective evidence of impairment exists as described under Loans and advances at amortised cost, the Group recognises the impairment charge under Net trading income. The impairment charge equals the difference between the fair value at the time of calculation and amortised cost. If the fair value subsequently rises, and the increase is attributable to one or more events that have occurred after the impairment charge was recognised, the Group reverses the impairment charge in the income statement.

When bonds are sold, the Group reclassifies unrealised value adjustments recognised in Other comprehensive income under Net trading income in the income statement.

### Held-to-maturity investments

Held-to-maturity investments consists of bonds with quoted prices in an active market held for the purpose of generating a return until maturity. Held-to-maturity investments are measured at amortised cost.

### 11. Loans and advances at amortised cost

Loans and advances consists of loans and advances disbursed directly to borrowers and loans and advances acquired after disbursement. Loans and advances extended or acquired by the Group for resale in the near term are included in the trading portfolio. Loans and advances includes conventional bank loans; finance leases; mortgages and pledges; reverse transactions, except for transactions with credit institutions and central banks; and certain bonds not quoted in an active market at the time of acquisition. Moreover, the item includes loans secured on real property, except for loans granted by Realkredit Danmark that are recognised under Loans at fair value.

At initial recognition, loans and advances are measured at fair value plus transaction costs less origination fees and other charges. Subsequently, they are measured at amortised cost, using the effective interest method, less any impairment charges. The difference between the value at initial recognition and the redemption value is amortised over the term to maturity and recognised under Interest income. If fixed-rate loans and advances and amounts due are hedged effectively by derivatives, the fair value of the hedged interest rate risk is added to the amortised cost of the assets.

#### Note

#### 45 Impairment

(cont'd) If objective evidence of impairment of a loan, an advance or an amount due exists, and the effect of the impairment event or events on the expected cash flow is reliably measurable, the Group determines the impairment charge individually.

Objective evidence of impairment of loans and advances exists if at least one of the following events has occurred:

- The borrower is experiencing significant financial difficulty.
- The borrower's actions, such as default or delinquency in interest or principal payments, lead to a breach of contract.
- The Group, for reasons relating to the borrower's financial difficulty, grants to the borrower a concession that the Group would not otherwise have granted.
- It becomes probable that the borrower will enter bankruptcy or other financial reorganisation.

Customers with loans and advances for which objective evidence of impairment exists, including loans and advances for which no impairment charges have been recognised, for example because customers have provided adequate collateral, are placed in rating category 10 or 11. If a customer facility is past due for 90 days, the customer is placed in rating category 11, and an impairment charge is recognised for the customer's total exposure.

Significant loans, advances and amounts due are tested individually for impairment at the end of each reporting period.

The impairment charge equals the difference between the carrying amount of a loan and advance and the present value of the most likely future cash flows from the loan and advance and is assessed by credit officers. The present value of fixed-rate loans and advances is calculated at the original effective interest rate, whereas the present value of loans and advances with a variable rate of interest is calculated at the current effective interest rate.

The customer's debt is written down to the amount that the borrower is expected to be able to repay after a financial reorganisation. If financial reorganisation is not possible, the writedown equals the estimated recoverable amount in the event of bankruptcy.

Loans and advances without objective evidence of impairment are included in an assessment of collective impairment at portfolio level. Collective impairment is calculated for portfolios of loans and advances with similar credit characteristics when impairment of expected future cash flows from a portfolio has occurred but no interest rate change has been agreed on to adjust the credit margin. The collective impairment charge reflects downgrading of customer ratings over time (migration). The loans and advances are divided into portfolios on the basis of current ratings. Calculation of charges also factors in portfolios of loans held by customers with upgraded ratings.

The cash flows are specified by means of parameters used for solvency calculations and historical loss data adjusted for use in the financial statements, for example. The adjustment reflects the loss identification period shown by the Group's empirical data. This period is the period from the first evidence of impairment to the determination of a loss at customer level.

Collective impairment is calculated as the difference between the carrying amount of the loans and advances of the portfolio and the present value of expected future cash flows

The collective impairment charge based on migration is adjusted if the Group is aware of market conditions at the balance sheet date that are not fully reflected in the Group's models. In times of favourable economic conditions, adjustments will reduce the impairment charge, while it may increase in an economic downturn. Examples of factors that determine economic conditions are levels of unemployment, housing prices and freight rates.

Impairment charges for loans, advances and guarantees are booked in an allowance account and set off against loans and advances or recognised as provisions for guarantees. Impairment charges for loans and advances are recorded under Loan impairment charges in the income statement. If subsequent events show that impairment is not permanent, charges are reversed.

Loans and advances that are considered uncollectible are written off. Write-offs are debited to the allowance account. Loans and advances are written off once the usual collection procedure has been completed and the loss on the individual loan or advance can be calculated. If the full loss is not expected to be realised until after a number of years, for example in the event of administration of complex estates, a partial write-off is recognised, reflecting the Group's claim less collateral, estimated dividend and other cash flows.

In accordance with the effective interest method, interest is recognised on the basis of the value of the loans and advances less impairment charges. Consequently, part of the allowance account balance is set aside for future interest income until the time of write-off.

# 12. Loans at fair value and bonds issued by Realkredit Danmark

Loans granted under Danish mortgage finance law are funded by issuing listed mortgage bonds with matching terms. Borrowers may repay such loans by delivering the underlying bonds.

The Group buys and sells own bonds issued by Realkredit Danmark on an ongoing basis because such securities play an important role in the Danish money market. If these loans and bonds were measured at amortised cost, the purchase and sale of own bonds would result in timing differences in the recognition of gains and losses on Realkredit Danmark bonds repurchased and the relevant loans. The purchase price of the mortgage bond portfolio would not equal the amortised cost of the issued bonds, and elimination would result in arbitrary recognition of gains

#### Note

45 and losses. If the Group subsequently decided to sell its (cont'd) holding of own bonds, the new amortised cost of this "new issue" would not equal the amortised cost of the matching loans, and the difference would be amortised over the remaining term to maturity. Consequently, the Group measures loans and issued bonds at fair value in accordance with the fair value option offered by IAS 39 to ensure that neither gain nor loss will occur on the purchase of own bonds.

At initial recognition, loans and issued bonds are measured at fair value, excluding transaction costs. Subsequently, such assets and liabilities are measured at fair value.

The fair value of the bonds issued by Realkredit Danmark is normally defined as their market value. A small number of the issued bonds are illiquid, however, and the fair value of these bonds is calculated on the basis of a discounted cash flow valuation technique.

The fair value of the loans is based on the fair value of the underlying bonds adjusted for changes in the fair value of the credit risk on borrowers. For loans granted to customers in rating categories 10 and 11 (all loans with objective evidence of impairment), such adjustment is made in accordance with principles similar to the principles for calculating individual impairment charges for loans at amortised cost. For discounting purposes, however, the current effective interest rate is used instead of the original effective interest rate.

A collective assessment also determines the need for adjustments to reflect changes in the fair value of the credit risk on the remaining portion of the portfolio. No changes are made if it is possible to raise the administration margin on loans (credit margin) sufficiently to compensate for the higher credit risk and market risk premium on mortgage loans. If it is not possible to raise the administration margin sufficiently or at all, a collective adjustment is made, reflecting trends in expected losses, unexpected losses (volatility) and the possibility of raising administration margins in the future. The expected future cash flows are discounted at the current market rate with the addition of a risk premium.

#### Assets and deposits under pooled schemes and unitlinked investment contracts

These items include assets and deposits under pooled schemes and unit-linked contracts defined as investment contracts.

Assets earmarked for customer savings are measured at fair value and recognised under Assets under pooled schemes and unit-linked investment contracts. Similarly, deposits made by customers are recognised under Deposits under pooled schemes and unit-linked investment contracts. These deposits are measured at the value of savings

Holdings of shares and bonds issued by the Group are deducted from shareholders' equity or eliminated. Consequently, the value of Deposits under pooled schemes and unit-linked investment contracts exceeds that of Assets under pooled schemes and unit-linked investment contracts.

#### 14. Assets and liabilities under insurance contracts

Assets under insurance contracts comprises assets earmarked for policyholders, that is, assets on which most of the return accrues to policyholders. The assets, which include financial assets, investment property, tangible assets and associates, are specified in the notes. The valuation technique used matches the Group's accounting policy for similar assets with the exception of holdings in associates. Such holdings are treated as held by a venture capital organisation and measured at fair value. Note 22 shows holdings in associates at group level. A few property holdings are jointly owned and therefore consolidated in the financial statements on a pro rata basis.

Liabilities under insurance contracts consists of life insurance provisions, provisions for unit-linked insurance contracts, collective bonus potential, other technical provisions and other liabilities.

Holdings of shares and bonds issued by the Group are deducted from shareholders' equity or eliminated. Consequently, the value of Liabilities under insurance contracts exceeds that of Assets under insurance contracts.

#### Life insurance provisions

Life insurance provisions comprises obligations towards policyholders to

- pay guaranteed benefits
- pay bonuses over time on agreed premiums not yet due
- pay bonuses on premiums and other payments due.

Recognition of life insurance provisions is based on actuarial computations of the present value of expected benefits for each insurance contract using the discount rate at the balance sheet date.

These computations rely on specific assumptions about expected future mortality and disability rates based on empirical data from Danica's portfolio and include a risk allowance.

Obligations for guaranteed benefits are calculated as the present value of the current guaranteed benefits plus the present value of expected future administrative expenses less the present value of future premiums.

Danish rules on insurance accounting determine the discount yield curve, which is fixed on the basis of a zero-coupon yield curve estimated on the basis of euro swap market rates to which is added the yield spread between Danish and German government bonds and a mortgage yield curve spread. In December 2011, the extraordinary market conditions prompted the Danish FSA to allow the calculation of the yield spread as a 12-month moving average. This means that daily market changes are reflected in the spread, but the effect of fluctuations is reduced. The adjusted discount curve reduced life insurance provisions at the end of 2011 by a total of DKK 2.8 billion.

#### Note

#### 45 Provisions for unit-linked insurance contracts

(cont'd) Provisions are measured at fair value on the basis of each contract's share of the earmarked assets and the guaranteed benefits.

#### Collective bonus potential

Provisions for the collective bonus potential comprise policyholders' share of the technical basis for insurance policies with a bonus entitlement not yet allocated to the individual policyholder.

#### Other technical provisions

Other technical provisions includes outstanding claims provisions, unearned premium provisions, and provisions for bonuses and premium discounts.

#### Other liabilities

Other liabilities includes the portion of Danica Pension's other liabilities assumed by customers. Other types of liability are measured in accordance with the Group's accounting policies for such liability types.

#### 15. Intangible assets

### Goodwill

Goodwill arises on the acquisition of an undertaking and is calculated as the difference between the cost, including direct transaction costs until 1 January 2010, of the undertaking and the fair value of its net assets, including contingent liabilities, at the time of acquisition. Goodwill on acquisitions made before 2002 was written off against shareholders' equity in the year of acquisition.

Goodwill on associates is recognised under Holdings in associates.

Goodwill is allocated to cash-generating units at the level at which management monitors the investment. Goodwill is not amortised; instead each cash-generating unit is tested for impairment once a year or more frequently if indications of impairment exist. Goodwill is written down to its recoverable amount through profit or loss if the carrying amount of the net assets of the cash-generating unit exceeds the higher of the assets' fair value less costs to sell and their value in use, which equals the present value of the future cash flows expected from the unit.

#### Other intangible assets

Software acquired is measured at cost, including expenses incurred to make each software application ready for use. Software acquired is amortised over its expected useful life, usually three years, according to the straight-line method.

Software developed by the Group is recognised as an asset if the cost of development is reliably measurable and analyses show that the future earnings from using the individual software applications exceed cost. Cost includes the expenses incurred to make each software application ready for use. Once a software application has been developed, the cost is amortised over its expected useful life, usually three years, according to the straight-line method. The cost of development consists primarily of direct remuneration and other directly attributable development costs.

Expenses incurred in the planning phase are not included but booked when incurred.

Identifiable intangible assets taken over on the acquisition of undertakings are measured at their fair value at the time of acquisition and amortised over their expected useful lives, usually three years, according to the straight-line method. The value of intangible assets with indefinite useful lives is not amortised, but the assets are tested for impairment at least once a year according to the principles applicable to goodwill.

Other intangible assets to be amortised are tested for impairment if indications of impairment exist, and the assets are subsequently written down to their value in use.

Costs attributable to the maintenance of intangible assets are expensed in the year of maintenance.

### 16. Investment property

Investment property is real property, including real property let under operating leases, which the Group owns for the purpose of receiving rent and/or obtaining capital gains. The section on domicile property below explains the distinction between domicile and investment property.

On acquisition, investment property is measured at cost, including transaction costs, and subsequently measured at fair value. Fair value adjustments and rental income are recognised under Other income in the income statement. Real property taken over by the Group under non-performing loan agreements that is expected to be sold within 12 months of classification is valued in accordance with principles used for investment property but presented as assets held for sale.

The fair value is assessed by the Group's valuers at least once a year. Assessments are based on the expected return on the Group's property portfolio and on the required rate of return calculated for each property. The required rate of return on a property is determined on the basis of its location, type, possible uses, layout and condition as well as on the terms of lease agreements, rent adjustment and the credit quality of lessees.

### 17. Tangible assets

Tangible assets includes domicile property, machinery, furniture and fixtures. Machinery, furniture and fixtures covers equipment, vehicles, furniture, fixtures, leasehold improvements and lease assets.

### Domicile property

Domicile property is real property occupied by the Group's administrative departments, branches and other service units. Real property with both domicile and investment property elements is allocated proportionally to the two categories if the elements are separately sellable. If that is not the case, such real property is classified as domicile property, unless the Group occupies less than 10% of the total floorage.

#### Note

45 Domicile property is measured at cost plus property im[cont'd] provement expenditure and less depreciation and impairment charges. The straight-line depreciation of the property
is based on the expected scrap value and an estimated useful life of 20 to 50 years. Real property held under longterm leases is depreciated on a progressive scale.

Investment property which becomes domicile property because the Group starts using it for its own activities is measured at fair value at the time of reclassification. Domicile property which becomes investment property is measured at fair value at the time of reclassification. Any revaluation of domicile property is recognised in other comprehensive income.

Domicile property which, according to a publicly announced plan, the Group expects to sell within 12 months is recognised as an asset held for sale under Other assets. The same principle applies to property taken over in connection with the settlement of debt if such property is likely to be sold within 12 months. If the property is unlikely to be sold within this period, it is classified as investment property.

### Machinery, furniture and fixtures

Equipment, vehicles, furniture, fixtures and leasehold improvements are measured at cost less depreciation and impairment charges. Assets are depreciated over their expected useful lives, usually three years, according to the straight-line method. Leasehold improvements are depreciated over the term of the individual lease, with a maximum of ten years.

#### Lease assets

Lease assets consists of assets, except real property, let under operating leases. Lease assets are measured using the same valuation technique as that applied by the Group to its other equipment, vehicles, furniture and fixtures. When, at the end of the lease period, lease assets are put up for sale, the assets are transferred to Other assets.

#### Impairment

Tangible assets are tested for impairment if indications of impairment exist. An impaired asset is written down to its recoverable amount, which is the higher of its fair value less costs to sell and its value in use.

#### 18. Other assets

Other assets includes interest and commission due, prepayments, lease assets put up for sale at the expiry of lease agreements and assets held for sale.

#### Lease assets put up for sale

Lease assets put up for sale are measured at the lower of their carrying amount at the time of reclassification (expiry of lease agreements) and their fair value less expected costs to sell.

### Assets held for sale

Assets held for sale are tangible assets and assets of group undertakings actively marketed for sale within 12 months, for example assets and businesses taken over under non-performing loan agreements.

Such assets are measured at the lower of their carrying amount at the time of reclassification and their fair value less expected costs to sell and are no longer depreciated. Liabilities of group undertakings are initially measured at fair value and subsequently in accordance with the Group's general accounting policies. The section on investment property explains the valuation and presentation of investment property and real property taken over.

#### Financial guarantees issued to the Group

Financial guarantees issued to the Group are contracts that require the issuer to make specified payments to reimburse the Group if a specified debtor or group of debtors fails to make payment when due in accordance with the terms of a debt instrument. Prepaid guarantee premiums are recognised under Other assets. Future payments that the Group is likely to receive are recognised as amounts due at present value.

#### Amounts due to credit institutions and central banks and Deposits

Amounts due to credit institutions and central banks and Deposits include amounts received under repo transactions (sales of securities which the Group agrees to repurchase at a later date).

Amounts due to credit institutions and central banks and Deposits are measured at amortised cost plus the fair value of the hedged interest rate risk.

### 20. Other issued bonds and Subordinated debt

Other issued bonds and Subordinated debt comprise bonds issued by the Group except bonds issued by Realkredit Danmark. Subordinated debt is liabilities in the form of subordinated loan capital and other capital investments which, in case of the Group's voluntary or compulsory winding-up, will not be repaid until the claims of its ordinary creditors have been met.

Other issued bonds and Subordinated debt are measured at amortised cost plus the fair value of the hedged interest rate risk

The yield on some issued bonds depends on an index that is not closely linked to the bonds' financial characteristics, for example an equity or commodity index. Such embedded derivatives are bifurcated and measured at fair value in the trading portfolio.

#### 21. Other liabilities

Other liabilities includes accrued interest, fees and commissions that do not form part of the amortised cost of a financial instrument.

Other liabilities also includes pension obligations, reserves subject to a reimbursement obligation relating to mortgage loan agreements, and provisions for other obligations, such as lawsuits and guarantees.

If a lawsuit is likely to result in a payment obligation, a liability is recognised if it can be measured reliably. The liability is recognised at the present value of expected payments.

#### Note

#### 45 Pension obligations

(cont'd) The Group's pension obligations consist of both defined contribution and defined benefit pension plans for its staff.

Under defined contribution pension plans, the Group pays regular contributions to insurance companies and other institutions. Such payments are expensed as they are earned by the staff, and the obligations under the plans are taken over by the insurance companies and other institutions.

Under defined benefit pension plans, the Group is under an obligation to pay defined future benefits from the time of retirement. The amounts payable are recognised on the basis of an actuarial computation of the present value of expected benefits. The present value is calculated on the basis of expected future trends in salaries and interest rates, time of retirement, mortality rates and other factors.

The present value of pension benefits less the fair value of pension assets is recognised as a pension obligation for each plan under Other liabilities. If the net amount of a defined benefit pension plan is positive and may be repaid to the Group or reduce its future contributions to the plan, the net amount is recognised under Other assets. The discount rate is based on the market rate of high-quality corporate bonds with maturities similar to the maturity of the pension obligations.

The difference between expected trends in pension assets and benefits and actual trends will result in actuarial gains or losses. Actuarial gains or losses that do not exceed the higher of 10% of the present value of benefits and 10% of the fair value of pension assets are not recognised in the income statement or in the balance sheet but form part of the corridor. If the accumulated actuarial gains or losses exceed both these threshold values, the excess amount is recognised both in the income statement and in the net pension obligation distributed over the expected remaining period of service of the staff covered by the plan.

### Irrevocable loan commitments and guarantees

At initial recognition, irrevocable loan commitments and guarantees are recognised at the amount of premiums received. Subsequently, irrevocable loan commitments and guarantees are measured at the higher of the received premiums amortised over the guarantee or commitment period and the provision made, if any. Provisions for irrevocable loan commitments and guarantees are recognised under Other liabilities if it is likely that drawings will be made under a loan commitment or claims be made under a guarantee and the amount payable can be reliably measured. The liability is measured at the present value of expected payments. Irrevocable loan commitments are discounted in accordance with the interest terms.

### 22. Deferred tax assets and Deferred tax liabilities

Deferred tax on all temporary differences between the tax base of assets and liabilities and their carrying amounts is accounted for in accordance with the balance sheet liability method. Deferred tax is recognised under Deferred tax assets and Deferred tax liabilities

The Group does not recognise deferred tax on temporary differences between the tax base and the carrying amounts of goodwill not subject to amortisation for tax purposes and other items if the temporary differences arose at the time of acquisition without effect on net profit or taxable income. If the tax base may be calculated according to several sets of tax regulations, deferred tax is measured in accordance with the regulations that apply to the use of the asset or settlement of the liability as planned by management.

Tax assets arising from unused tax losses and unused tax credits are recognised to the extent that such unused tax losses and unused tax credits can be used.

Deferred tax is measured on the basis of the tax regulations and rates that, according to the rules in force at the balance sheet date, are applicable in the relevant countries at the time the deferred tax is expected to crystallise as current tax. Changes in deferred tax as a result of changes in tax rates are recognised in the income statement.

#### 23. Current tax assets and Current tax liabilities

Current tax assets and liabilities are recognised in the balance sheet as the estimated tax payable on the profit for the year adjusted for prepaid tax and prior-year tax payables and receivables.

Tax assets and liabilities are offset if the Group has a legally enforceable right to set off such assets and liabilities and intends either to settle the assets and liabilities on a net basis or to realise the assets and settle the liabilities simultaneously.

#### 24. Shareholders' equity

### Foreign currency translation reserve

The foreign currency translation reserve includes differences arisen since 1 January 2004 from the translation of the financial results of and net investments in units outside Denmark from their functional currencies into Danish kroner. The reserve also includes exchange rate adjustments of financial liabilities used to hedge net investments in such units.

If the net investment in a unit outside Denmark is fully or partly realised, translation differences are recognised in the income statement.

### Reserve for assets available for sale

The reserve covers unrealised value adjustments of bonds treated as available-for-sale financial assets recognised in Other comprehensive income. Unrealised value adjustments of hedged interest rate risks that qualify for fair value hedge accounting are recognised in the income statement and not included in the reserve.

If objective evidence of impairment exists, the Group reclassifies accumulated unrealised capital losses from the reserve to the income statement. When bonds are sold, the Group also reclassifies unrealised value adjustments from the reserve to the income statement.

#### Note

#### 45 Proposed dividends

(cont'd) The Board of Directors' proposal for dividends for the year submitted to the general meeting is included as a separate reserve in shareholders' equity. The dividends are recognised as a liability when the general meeting has adopted the proposal.

#### Own shares

Amounts received and paid for the Group's purchase and sale of Danske Bank shares are recognised directly in shareholders' equity. The same applies to premiums received or paid for derivatives entailing settlement in own shares.

A capital reduction by cancellation of own shares will lower the share capital by an amount equal to the nominal value of the shares at the time of registration of the capital reduction

#### Share-based payments

Share-based payments by the Group are settled in Danske Bank shares. The fair value at the grant date is expensed over the vesting period and is set off against shareholders' equity. At the time of exercise, payments by employees are recognised as an increase in shareholders' equity. As with other purchases of Danske Bank shares, shares acquired for hedging purposes reduce shareholders' equity by the amount paid.

### Non-controlling interests

Non-controlling interests' share of shareholders' equity equals the carrying amounts of the net assets in group undertakings not owned directly or indirectly by Danske Bank A/S

### 25. Contingent assets and Contingent liabilities

Contingent assets and Contingent liabilities consist of possible assets and liabilities arising from past events. The existence of such assets and liabilities will be confirmed only by the occurrence or non-occurrence of one or more uncertain future events not wholly within the Group's control.

Contingent assets are disclosed when an inflow of economic benefits is probable.

Contingent liabilities that can, but are not likely to, result in an outflow of economic resources are disclosed. In addition, disclosure is made of current liabilities that are not recognised because it is not probable that they will entail an outflow of economic resources or because no reliable estimate can be made

### INCOME STATEMENT

#### 26. Interest income and expenses

Interest income and expenses arising from interest-bearing financial instruments measured at amortised cost are recognised in the income statement according to the effective interest method on the basis of the cost of the individual financial instrument. Interest includes amortised amounts of fees that are an integral part of the effective yield on a financial instrument, such as origination fees, and amortised differences between cost and redemption price, if any.

Interest income and expenses also include interest on financial instruments measured at fair value but not interest on assets and deposits under pooled schemes and unit-linked investment contracts; the latter is recognised under Net trading income. Origination fees on loans measured at fair value are recognised under Interest income at origination.

Interest on loans and advances subject to individual impairment is recognised on the basis of the impaired value.

#### 27. Fee income and expenses

Fee income and expenses are broken down into fees generated by activities and fees generated by portfolios.

Income from and expenses for services provided over a period of time, such as guarantee commissions and investment management fees, are accrued over the period.

Transaction fees, such as brokerage and custody fees, are recognised on settlement of the individual transaction.

#### 28. Net trading income

Net trading income includes realised and unrealised capital gains and losses on trading portfolio assets and other securities (including securities recognised under Assets under insurance contracts, Loans at fair value and Bonds issued by Realkredit Danmark) as well as exchange rate adjustments and dividends. The effect on profit or loss of fair value hedge accounting is also recognised under Net trading income.

Returns on assets under pooled schemes and unit-linked investment contracts and the crediting of the returns to customer accounts are also recognised as Net trading income. Moreover, the item includes the change in insurance obligations during the year due to additional provisions for benefit guarantees and tax on pension returns.

### 29. Other income

Other income includes rental income and lease payments under operating leases, fair value adjustments of investment property, amounts received on the sale of lease assets and gains and losses on the sale of other tangible and intangible assets.

#### 30. Net premiums

Regular and single premiums on insurance contracts are recognised in the income statement at their due dates. Premiums on investment contracts are recognised directly in the balance sheet. Reinsurance premiums paid are deducted from premiums received.

#### 31. Net insurance benefits

Net insurance benefits includes benefits disbursed under insurance contracts. The item also includes adjustments to outstanding claims provisions and life insurance provisions that are not additional provisions for benefit guarantees. The benefits are recognised net of reinsurance.

#### Note

#### 45 32. Income from associates

(cont'd) Income from associates comprises the Group's proportionate share of the net profit or loss of the individual businesses. Fair value adjustment of venture capital holdings is recognised as Net trading income, however.

### 33. Profit on sale of associates and group undertakings

The profit on sale of associates and group undertakings is the difference between the selling price and the carrying amount, including goodwill, if any, of such sale.

# 34. Staff costs and administrative expenses Staff costs

Salaries and other remuneration that the Group expects to pay for work carried out during the year are expensed under Staff costs and administrative expenses. This item includes salaries, performance-based pay, expenses for share-based payments, holiday allowances, anniversary bonuses, pension costs and other remuneration.

#### Performance-based pay and share-based payments

Performance-based pay is expensed as it is earned. Part of the performance-based pay for the year is paid in the form of equity-settled options (suspended in 2008) and conditional shares. Share options may not be exercised until three years after the grant date and are conditional on the individual employee's not having resigned from the Group. Rights to conditional shares vest up to five years after the grant date, provided that the employee, with the exception of retirement, has not resigned from the Group. In addition to this requirement, the vesting of rights earned from 2010 is conditional on certain targets.

The fair value of share-based payments at the grant date is expensed over the service period that unconditionally entitles the employee to the payment. The intrinsic value of the options is expensed in the year in which the share-based payments are earned, while the time value is accrued over the remaining service period. Expenses are set off against shareholders' equity. Subsequent fair value adjustments are not carried in the income statement.

### Pension obligations

The Group's contributions to defined contribution pension plans are recognised in the income statement as they are earned by the employees. The Group applies the corridor method to defined benefit pension plans, and the income statement thus includes actuarial pension expenses (standard cost).

# **35.** Amortisation, depreciation and impairment charges In addition to amortisation, depreciation and impairment charges for intangible and tangible assets, the Group expenses the carrying amount of lease assets sold at the expiry of a lease agreement.

#### 36. Loan impairment charges

Loan impairment charges includes losses on and impairment charges against loans, advances, amounts due from credit institutions and guarantees, as well as fair value adjustments of the credit risk on loans measured at fair value.

The item also includes impairment charges and realised gains and losses on tangible assets and group undertakings taken over by the Group under non-performing loan agreements if the assets qualify as held-for-sale assets. Similarly, subsequent value adjustments of assets that the Group has taken over and does not expect to sell within 12 months are recognised under loan impairment charges, provided that the Group has a right of recourse against the borrower.

#### 37. Tax

Calculated current and deferred tax on the profit for the year and adjustments of prior-year tax charges are recognised in the income statement. Income tax for the year is recognised in accordance with the tax laws in force in the countries in which the Group operates. Tax on items recognised in Other comprehensive income is recognised in Other comprehensive income. Similarly, tax on items recognised in shareholders' equity is recognised in shareholders' equity.

#### 38. Comprehensive income

Comprehensive income includes the net profit for the year and Other comprehensive income from translation of units outside Denmark, hedging of units outside Denmark and unrealised value adjustments of available-for-sale financial assets.

### 39. Cash flow statement

The Group has prepared its cash flow statement according to the indirect method. The statement is based on the pretax profit for the year and shows the cash flows from operating, investing and financing activities and the increase or decrease in cash and cash equivalents during the year.

Cash and cash equivalents consists of cash in hand and demand deposits with central banks and amounts due from credit institutions and central banks with original maturities shorter than three months.

#### 40. Financial highlights

The financial highlights in note 2 deviate from the corresponding figures in the consolidated financial statements.

Income of the Danske Markets segment is recognised in the consolidated income statement under Net trading income and Net interest income. The value of each item may vary considerably from year to year, depending on the underlying transactions and market conditions. Therefore, the Net trading income item in the financial highlights shows all trading activity income, except yields on bonds classified as available-for-sale assets.

### Note

45 Income and expenses of the Danica Pension segment are (cont'd) consolidated on a line-by-line basis. The return on insurance activities accruing to the Group is determined by the contribution principle. The contribution calculation is based primarily on life insurance obligations. Since the Group's return cannot be derived directly from the individual income statement items, net income from insurance business is presented on a single line in the financial highlights.

Other income includes earnings contributed by fully consolidated subsidiaries taken over by the Group under non-performing loan agreements and held for sale.

Definitions of key financial ratios	
Ratio	Definition
Earnings per share (DKK)	Net profit for the year divided by the average number of shares outstanding during the year. Ratios have been adjusted to reflect the share capital increase in April 2011. For comparative purposes, the number of shares is adjusted for the dilutive effect of the share capital increase. The factor is calculated as the weighted average share price of existing and new shares divided by the share price on the day before the exercise of subscription rights.
Diluted earnings per share (DKK)	Net profit for the year divided by the average number of shares outstanding during the year, including the dilutive effect of share options and conditional shares granted as share-based payments. Ratios have been adjusted to reflect the share capital increase in April 2011.
Return on average shareholders' equity [%]	Net profit for the year divided by average shareholders' equity during the year.
Cost/income ratio [%]	Expenses divided by total income.
Total capital ratio	Total capital base divided by risk-weighted assets.
Tier 1 capital ratio	Tier 1 capital divided by risk-weighted assets.
Tier 1 capital	Primarily paid-up share capital plus retained earnings and hybrid capital, less certain deductions, such as intangible assets.
Hybrid capital	Loans that form part of tier $1$ capital. This means that hybrid capital is used for covering losses if shareholders' equity is lost.
Tier 2 capital	Subordinated loan capital subject to certain restrictions. For example, if the Group defaults on its payment obligations, lenders cannot claim early redemption of the loan capital.
Capital base	Tier $1$ capital and tier $2$ capital, less certain deductions. Tier $2$ capital may not account for more than half of the capital base.
Risk-weighted assets	Total risk-weighted assets and off-balance-sheet items that involve credit risk, market risk and operational risk as calculated in accordance with the Danish FSA's rules on capital adequacy.
Dividend per share (DKK)	Proposed dividend on the net profit for the year divided by the number of issued shares at the end of the year. Ratios have been adjusted to reflect the share capital increase in April 2011.
Share price at 31 December	Closing price of Danske Bank shares at the end of the year.
Book value per share (DKK)	Shareholders' equity at $31$ December divided by the number of shares outstanding at the end of the year. Ratios have been adjusted to reflect the share capital increase in April 2011.
Number of full-time-equivalent staff at 31 December	Number of full-time-equivalent staff (part-time staff translated into full-time staff) at the end of the year. The figure does not include the staff of businesses held for sale.
Funding ratio	Lending divided by working capital less bond issues with a term to maturity shorter than one year. Working capital comprises deposits, issued bonds, subordinated debt and shareholders' equity. Lending and deposit figures do not include repo transactions.
Lending growth (year-on-year)	Growth in lending from the beginning to the end of the year.
Real property exposure	Share of total lending and guarantees to the Real property and Building projects industry segments

as defined by Statistics Denmark.

#### Risk exposure

The Danske Bank Group is exposed to a number of risks, which it manages at different organisational levels.

The main categories of risk are the following:

- Credit risk: The risk of losses because counterparties fail to meet all or part of their payment obligations to the Group.
- Market risk: The risk of losses because the fair value of the Group's assets and liabilities varies with changes in market conditions.
- Liquidity risk: The risk of losses because the Group's funding costs increase disproportionately, lack of funding prevents the Group from establishing new business, or lack of funding ultimately prevents the Group from meeting its obligations.
- Insurance risk: All types of risk in Danica Pension, including market risk, life insurance risk and operational risk.
- Pension risk: The risk of a pension shortfall in the Group's defined benefit plans that requires it to make additional contributions to cover pension obligations to current and former employees.

Danica Pension is a wholly-owned subsidiary of Danske Bank. As required by Danish law and the executive order on the contribution principle, Danica Pension has notified the Danish FSA of its profit policy. The contribution principle and the profit policy imply that policyholders assume the risks and receive the returns on assets allocated to them. Assets are allocated to policyholders to secure customers' guaranteed benefits. Market risk and other risks on assets and liabilities allocated to policyholders are therefore not consolidated in the tables of this section, but are treated in the section on insurance risk.

The management's report and Risk Management 2011 provide a detailed description of the Danske Bank Group's risk management practices. Risk Management 2011 is available at www.danskebank.com/ir. The publication is not covered by the statutory audit.

#### Capital base

The Group's capital management policies and practices support its business strategy and ensure that it is sufficiently capitalised to withstand even severe macroeconomic downturns.

Danske Bank is a licensed financial services provider and must therefore comply with the capital requirements of the Danish Financial Business Act. The Danish rules are based on the EU capital requirements directives and apply to both the Parent Company, Danske Bank A/S, and the Group. Similarly, the Group's financial subsidiaries in and outside Denmark must comply with local capital requirements. The regulatory requirements stipulate a minimum capital level of 8% of risk-weighted assets under Pillar I (risk-weighted assets for credit risk, market risk and operational risk) and an additional solvency need to reflect all relevant risks.

The Group's capital base consists of tier 1 capital and subordinated debt.

Core tier 1 capital is based on the carrying amount of shareholders' equity with the following adjustments: domicile property is revalued at its estimated fair value, the corridor method is not applied to pension obligations, and proposed dividends, goodwill and other intangible assets, etc. are not included. The presentation of the capital base and the total capital ratio in the statement of capital shows the difference between the carrying amount of shareholders' equity and core tier 1 capital.

The Group's subordinated debt may, subject to certain conditions, be included in the capital base. Part ten, General regulations regarding solvency, of the Danish Financial Business Act specifies these conditions. Note 32 shows the Group's subordinated debt. At the end of 2011, the capital base was DKK 162.1 billion (31 December 2010: DKK 149.7 billion), and the total capital ratio was 17.9% (31 December 2010: 17.7%). Total tier 1 capital was DKK 145.0 billion (31 December 2010: DKK 124.8 billion), and the tier 1 capital ratio was 16.0% (31 December 2010: 14.8%). In the spring of 2011, the Group strengthened its core tier 1 capital by means of a rights issue.

Risk Management 2011 provides a description of the Group's solvency need – that is, a capital base adequate in terms of size, type and composition to cover the Group's risks. The publication is not covered by the statutory audit.

The Group's capital considerations are based on an assessment of the capital requirements under the current capital adequacy rules and the rules on the transition from previous regulation as well as on an assessment of the effects of future regulation, including the CRD IV. The Group also considers criteria such as expected growth and earnings, dividend policy and stress test scenarios.

The Group aspires to improve its credit ratings, which are important for its access to liquidity and for the pricing of its long-term funding. The Group therefore includes rating targets in its capital considerations.

#### Credit risk

The Danske Bank Group offers loans, credits, guarantees and other products as part of its business model and thus incurs credit risk.

Credit risk is the risk of losses arising because counterparties or debtors fail to meet all or part of their payment obligations. Included in credit risk is the risk of losses because an entire country may encounter financial difficulties, or losses because of political decisions on nationalisation and expropriation, for example. The risk of losses because of customers' default on derivatives transactions is called counterparty risk.

The Group grants credits on the basis of information about customers' individual financial circumstances and monitors customers' financial situation on an ongoing basis to assess whether the basis for credit has changed. Facilities should match the customers' financial situation, including earnings, capital and assets, and business volume with Danske Bank to a reasonable degree, and the customers should be able to substantiate their repayment ability. Collateral is usually required for credit facilities with long maturities (typically over five years) and for the financing of fixed assets.

#### Credit exposure

In the following tables, the Group's credit exposure is defined as the maximum credit exposure excluding collateral. This section also includes detailed information on collateral received.

The credit exposure consists of balance sheet items and off-balance-sheet items that carry credit risk. Most of the exposure derives from lending activities in the form of secured and unsecured loans. Positions taken by the Group's trading and investment units also involve credit risk. A segment of credit risk concerns derivatives and is designated counterparty risk. The overall management of credit risk covers counterparty risk; the credit exposure from securities positions, mainly at trading and investment units; and the risk on direct lending to the same counterparties.

The Group is exposed only to a limited extent to the risk on some balance sheet items. This is the case for assets under customer-funded investment pools, unit-linked investment contracts and insurance contracts. The risk on assets under pooled schemes and unit-linked investment contracts is assumed solely by the customers, while the risk on assets under insurance contracts is assumed primarily by the customers. The section on insurance risk describes the Group's credit risk on insurance contracts.

In addition to credit exposure from lending activities, the Group has made loan offers and granted revocable loan commitments in the amount of DKK 355 billion (31 December 2010: DKK 396 billion). These items are included in the calculation of risk-weighted assets in accordance with the Capital Requirements Directive.

### Credit exposure from lending activities

The table named Credit exposure broken down by industry (GICS) shows the credit exposure of the Group's core banking business by industry and customer segment. The breakdown follows the Global Industry Classification Standard (GICS), supplemented by the Personal customers, Subsidised housing companies, and Central and local governments categories.

#### (DKK millions)

#### Classification of customers

As part of the credit process, the Group classifies customers according to risk and updates the classification upon receipt of new information. The main objectives of risk classification are to rank the Group's customer base according to risk and to estimate the probability of default (PD) of each customer. The risk classification process also ensures a shared understanding across the Group of the credit risk that customers pose. Risk classification comprises rating and credit scoring of customers.

The Group uses a number of rating models that it has developed for classifying customers in various groups. Group Credit is responsible for the overall rating process, while Group Finance is responsible for validating the rating models and processes. Customer ratings are reassessed periodically. Large business and financial customers' ratings are reassessed more frequently than those of smaller customers. The reassessments are based on new information, including financial statements, budgets and other information, that affects customers' creditworthiness. Group Credit rates the largest customers, while smaller customers are rated by the local units' credit departments. Group Credit ensures that the part of the process that is carried out locally follows the same overall guidelines as the process carried out at the head office for the largest customers. Two persons are always involved in a rating decision: a rating officer who recommends the rating and a senior rating officer with authority to approve the rating.

The Group assigns credit scores to customers who are not rated. These customers include personal customers and small business customers. The Group has developed statistical models based on the information it possesses about customers that predict the likelihood that a customer will default on its payment obligations to the Group. The credit score represents the risk of loss on an exposure on the basis of well-defined characteristics of the customer's financial situation. Customer advisers use credit scores for granting loans and setting pricing. Since the accessibility of data about personal customers varies from country to country, the Group has developed personal customer models for each market in which it operates.

In its credit risk management, the Group uses point-in-time (PIT) probability of default (PD) estimates. These PIT PD estimates express a customer's creditworthiness in the current economic situation. The Group's classification scale consists of 11 general rating categories with fixed PD bands. During a recessionary period, a customer's PIT PD will normally increase, and the customer will migrate to a lower rating category. The effect of using the PIT PD will thus be larger than if the classification were based on the through-the-cycle PD, which the Group uses to calculated risk-weighted assets for credit risk.

At the end of the year, the exposure-weighted average PD was 1.43%, against 1.32% in 2010.

#### (DKK millions)

#### Risk concentration

The Group uses the risk concentrations it identifies in the credit portfolio as a credit risk management parameter. Risk concentrations arise in the credit portfolio as an inevitable consequence of the Group's business strategy. Risk concentrations can be divided into individual customer concentrations and portfolio concentrations.

#### Individual customer concentrations

Under section 145 of the Danish Financial Business Act, exposure to a single customer or a group of related customers, after deduction of particularly secure claims, may not exceed 25% of the capital base. In 2011, the Group's exposures did not exceed the limits established by section 145.

With effect from 1 December 2011, the exposure from covered bonds is excluded from the calculation of large exposures.

The table below shows credit exposures to groups equalling 10% or more of the Group's capital base. The table does not include intra-group balances. At the end of 2011, one exposure exceeded 10% of the capital base (classified in rating category two), and no exposure exceeded 20% of the capital base. Excluding exposure from covered bonds from the calculation of large exposures at 31 December 2010 would have reduced the number of large exposures to three.

	2011 Exposures calculated in accordance with section 145	2010 Exposures calculated in accordance with section 145
Number	1	4
Exposure > 20% of capital base	-	-
Exposure between 10% and 20% of capital base	18,035	65,610
Total	18,035	65,610

The Group has introduced a stricter internal portfolio limit of 95% of the capital base for the sum of individual exposures that exceed 10% of the capital base as well as a limit of 150% of the capital base for the sum of exposures from 5-9.99% of the capital base – that is, the largest individual exposures that are not covered by the rules on large exposures.

#### Portfolio concentrations

The Group's credit exposure is concentrated especially in personal customers and SMEs. At the end of 2011, exposure to personal customers amounted to 39% of total credit exposure [31 December 2010: 38%]. Most of this exposure involved home financing secured against the properties. SMEs accounted for 27% of total credit exposure [31 December 2010: 26%]. Most of this exposure involved property financing, with operating finance accounting for most of the remainder.

Customers domiciled in Denmark accounted for 54% of the credit exposure (31 December 2010: 53%), and customers in the other Nordic countries accounted for 30% (31 December 2010: 29%).

#### Collateral

Mitigating risks in the credit portfolio is a key element of the Group's credit policy. For many loan products, collateral is required by legislation, as in mortgage finance, or is standard market practice.

The most important means of mitigating risk are collateral and guarantees. The most common collateral types, measured by collateral value, are real property and financial assets (shares or bonds).

The initial valuation of collateral takes place during the credit approval process, when the Group collects information that enables it to make a sound valuation. In compliance with local statutory regulations, the Group regularly reassesses the value of the collateral. The value of collateral is based on the capital adequacy rules and is calculated as the estimated amount at which it can be sold on the valuation date to an independent party, adjusted for a haircut and the outstanding debt on any senior claims. For the most common collateral types, the Group uses models to estimate value. For collateral types for which there is no valuation model, the Group calculates the value manually.

A haircut is a measure of the risk that the Group will not be able to sell collateral at a price equal to the expected market value. The haircut thus includes maintenance costs in the period when the asset is for sale, fees for external advisory services and any loss in value. For real property, haircuts depend on the property type and usually range between 20% and 40% of the property's market value. For listed securities, the haircut is calculated using an internal model based on 20-day price volatility. For unlisted securities, the haircut is 100%.

Realisation of collateral is generally made on behalf of the borrower. However, if the Group submits the highest bid at a forced sale of property and acquires title, it will seek to sell the property as soon as possible. At the end of 2011, the Group recognised properties taken over in Denmark at a carrying amount of DKK 317 million (31 December 2010: DKK 282 million) and properties taken over in other countries at DKK 128 million (31 December 2010: DKK 126 million). The properties are held for sale.

 $The \ last \ krone \ of \ each \ exposure \ determines \ the \ band \ under \ which \ the \ entire \ exposure \ is \ registered.$ 

Most of the collateral provided by customers in rating category 11 is real property. In its measurement of real property, the Group factors in local price and market conditions. The value of collateral is usually measured at 60-80% of the market value.

[DKK millions]

Total	480	914	66	1	1,461	9,488

The Group uses 90 days past due as a definition of default (rating category 11), unless the customer's rating is among the four best categories or new loan documents are under preparation.

The average unsecured portion of the claims recorded as past due amounts with no evidence of impairment was 22.2% at the end of 2011 (31 December 2010: 53.9%). Real property accounted for 86.7% of the collateral provided (31 December 2010: 85.8%).

### Impairment charges

Rating categories 10 and 11 include customers with exposures for which objective evidence of impairment exists and individual impairment charges are made. Exposure to customers in the other rating categories is subject to collective impairment testing.

The allowance account includes all impairment charges against loans and advances at amortised cost, loans at fair value, amounts due from credit institutions and central banks, and irrevocable loan commitments and guarantees.

### (DKK millions)

Collective impairment charges include charges that reflect the migration of customers from one rating category to another. If all customers were downgraded one rating category with no corresponding interest rate change, collective impairment charges would increase by about DKK 5.0 billion (31 December 2010: DKK 5.4 billion).

If the value of collateral provided by customers in rating categories 10 and 11 decreased 10%, individual impairment charges would increase by about DKK 3.0 billion (31 December 2010: about DKK 3.0 billion).

The bond portfolio includes bonds worth DKK 145,691 million recognised as assets under insurance contracts (see the section below on insurance risk). For bonds classified as held-to-maturity, fair value equalled amortised cost at the end of 2011. At the end of 2010, fair value exceeded amortised cost by DKK 0.1 billion.

Credit exposure to government bonds issued by Ireland, Portugal, Italy and Spain amounted to DKK 2.5 billion at the end of 2011 (31 December 2010: DKK 6.9 billion). All government bonds issued by these countries were recognised at fair value. When taking unsettled transactions in bonds issued by these countries and hedging transactions into account, the total risk exposure was DKK 1.3 billion (31 December 2010: DKK 5.0 billion). In 2011, the bond portfolio did not include government bonds issued by Greece. Exposures below DKK 1 billion are aggregated in the Other category. Risk Management 2011 provides additional details about the Group's risk exposure. The publication is not covered by the statutory audit.

#### Market risk

Market risk is defined as the risk of losses because the fair value of assets and liabilities varies with changes in market conditions.

Taking on market risk is an integral part of the Group's business strategy. The activities that involve market risk derive mainly from the Group's focus on business and personal customer banking, providing all its products to Nordic customers and core products to customers outside the Nordic region. Sophisticated products are traded mainly with professional customers. Besides the exposure to market risk arising from servicing customers, the Board of Directors has set limits that allow the Group's trading units to take positions for their own accounts and at their own risk. The Group also takes on market risk as part of treasury management that supports the procurement and day-to-day management of liquidity.

The Group uses both conventional risk measures and mathematical and statistical models, such as Value at Risk (VaR), to manage and monitor its market risk on a daily basis, and the Group treats risk exposure in and outside the trading portfolio as a single portfolio. The Group uses limits for the exposure to each type of market risk.

The market risk on the assets in which Danica Pension's equity is invested and on assets allocated to Danica Pension's policyholders is treated as an insurance risk. The market risk from the Group's defined benefit pension plans is treated as a pension risk.

#### Models

The Group measures the interest rate risk on positions exposed to interest rate changes on a daily basis. The risk is calculated as the maximum loss upon a parallel shift in yields of 1 percentage point. Most of the Group's interest rate risk derives from positions in Danish kroner and euros. As part of its daily monitoring of interest rate risk, the Group calculates yield curve risk and interest rate basis risk. The yield curve risk expresses the risk of losses arising because yields for various maturities change independently of one another. Interest rate basis risk is the risk that, upon changes in yields, the market values of offsetting exposures used for hedging do not change to exactly the same degree. Interest rate basis risk occurs mainly because of unequal shifts in various currencies' yield curves or unequal shifts in the yield curves in one currency used to price financial instruments with differing interest reset dates.

Positions in bonds are also exposed to spread risk. The bond spread reflects the additional net return an investor requires on securities with a given credit quality and liquidity compared with the return on liquid securities without credit risk or a reference rate (such as a swap rate). Bond spread risk thus measures the change in value due to changes in the market's assessment of the credit quality and liquidity. For internal monitoring purposes, the Group divides bond spread risk into three sub-categories: mortgage spread risk, government spread risk and credit spread risk. Most of the Group's bond spread risk can be attributed to bonds issued to fund real property loans.

The Group's management of the bond exposure is based on an individual credit assessment and approval of issuer lines for nominal amounts of bond holdings supplemented by limits on the price sensitivity to a change of 1 basis point (BPV) in the bond spreads. Besides the current rating, monitoring of government spread risk includes an assessment of market information on expectations about future risk. Key factors are the rating agencies' expectations about future ratings (the rating outlook), the spread on credit default swaps for the issuers, and the spread to the yield on the equivalent German government bonds. The assessment of government bond risk is thus based on more criteria than the current rating.

The Group uses a VaR model that includes all currency positions, including options, to measure and monitor its foreign exchange risk. The calculation of foreign exchange risk is based on two parameters: a confidence level of 95% and a time horizon of ten days.

Equity market risk distinguishes between the risk associated with listed shares and that associated with unlisted shares. For listed shares, the Group calculates equity market risk as the net market value of short and long positions in equities and equity-related instruments. For unlisted shares, the Group distinguishes between ordinary open positions, unutilised private equity commitments and banking-related investments. Banking-related investments comprise equity holdings in financial infrastructure and payment service companies.

Inflation rate risk is determined as expected losses because of changes in traded future inflation rates of  $\pm$ 1 percentage point. Commodity risk is measured as the expected loss on commodity instruments caused by changes of  $\pm$ 1.0% in individual commodity indices.

To supplement conventional risk measures, the Group uses its VaR model for the internal management and monitoring of general interest rate, yield volatility, inflation rate, foreign exchange and equity market risks. As the Group's exposure is limited, the VaR measure does not cover commodity risk. One of the major strengths of VaR is that it provides an aggregate measure of all risk types included in the model and factors in the correlation structure of the financial markets.

In the autumn of 2011, the Group expanded the model to include some new risk factors: interest rate basis risk, discount risk, yield volatility and inflation. The expanded model was approved by the Danish FSA in December 2011, and the Group began using it as its internal model for market risk.

### (DKK millions)

The internal VaR model is used for various purposes – risk monitoring, the calculation of the capital requirement for general market risk and the calculation of economic capital.

	Risk monitoring	Capital requirement
Horizon	10 days	10 days
Confidence level	95%	99%

The table below shows the Group's market risk at the end of 2011 and 2010.

	2011	2010
Interest rate risk (parallel shift of the yield curve of 1 percentage point)	870	496
Foreign exchange risk (VaR, confidence level of 95%, 10-day horizon)	24	23
Equity market risk, listed shares (net position)	252	1,131
Equity market risk, unlisted shares (net position)	3,921	3,886
Mortgage spread risk (basis point value)	67	68
Government spread risk (basis point value)	-2	4
Credit spread risk on corporate bonds (basis point value)	1	3
Inflation rate risk (change in traded future inflation of 1 percentage point)	37	20
Commodity risk (10% change in commodity prices)	-	-

### Value at Risk

The table below shows the VaR figures used to calculate the capital requirement for market risk.

		2011					2010			
		Daily VaR Stressed			Stressed	Daily VaR				
Risk category	Avg. VaR	Minimum VaR	Maximum VaR	31 Dec.	VaR 31 Dec.	Avg. VaR	Minimum VaR	Maximum VaR	31 Dec.	
Interest rate risk	196	87	390	246	268	206	85	360	169	
Foreign exchange risk	37	11	110	39	59	36	7	76	29	
Equity market risk	46	18	125	22	39	65	26	167	65	
Diversification benefit	-68			-70	-104	-80			-73	
Total VaR	211	92	406	237	262	227	99	399	190	

### (DKK millions)

#### Back- and stress testing

The Group conducts backtests daily to document the accuracy of the internal VaR model. The backtesting compares 1-day VaR calculated on trading book positions with the hypothetical profit or loss resulting from keeping these positions unchanged until the following business day (no intraday trading is included). If the hypothetical loss exceeds the predicted possible loss (VaR), an exception has occurred. Since the VaR figures used for backtesting are based on a confidence level of 99% (as in the calculation of the capital requirement), the expected number of exceptions per year is two or three. The backtest results for 2010 and 2011 are shown in the chart below. The 2011 figures were calculated with the expanded VaR model described above because it was used to calculate the Group's capital requirement at the end of the year.

In 2010, the VaR model showed a higher-than-expected number of exceptions in the backtest, while the expanded model showed two exceptions in 2011, and this was acceptable in view of the expected number of exceptions. An analysis of the individual exceptions in 2011 showed that they were caused by the large fluctuations in yields and equity prices in the financial markets, particularly in the second half of the year. The Group believes that the latest expansion of the VaR model has made the model more robust.

As a supplement to the daily calculation of VaR and the more conventional risk figures, the Group performs stress tests and sensitivity analyses on a regular basis. Some of these tests are part of the daily limit control, while others are performed weekly or quarterly.

Stress test scenarios feature changes in interest rates, exchange rates, equity prices, volatilities and bond spreads. Such changes affect the Group's earnings directly through value adjustments. The scenarios are often based on large changes in a single risk factor or on conditions that reflect historical periods of economic or financial crisis, combined with factors relevant under the current market conditions. In addition, some scenarios are constructed so that they are consistent with the set of scenarios that is applied across the Group's business units. The table below shows the maximum loss in a number of extreme, but not necessarily probable, scenarios.

Risk category	Change	Maximum loss 2011	Maximum loss 2010
Equity market risk	+20/-20%	26	173
Foreign exchange risk	+10/-10%	693	263
Interest rate risk	+200/-200 bp	1,798	453

The Group's periodical stress tests and sensitivity analyses also include scenarios with extreme market developments as defined by the European Banking Authority (EBA) in the spring of 2011, as well as hypothetical scenarios involving extreme financial or macroeconomic events.

In 2010, the Group's stress testing framework was expanded to include stressed VaR calculations made with the internal VaR model. The amendments to the CRD (CRD III), which took effect in Danish law in 2011, stipulate that VaR must be calculated in situations of stress with historical data from a period of substantial volatility in the financial markets. The stressed VaR calculations cover only positions in the trading book, and for the Group they are based on market data from 2008.

### (DKK billions)

#### Liquidity risk

Liquidity management at the Danske Bank Group is intended to ensure that the Group at all times has sufficient liquidity to meet its obligations. The Group has arranged its liquidity management structure to meet this objective by ensuring that its financing is robust and can withstand even improbable situations that would have a substantial adverse effect on its liquidity.

The Group's liquidity risk does not include the liquidity risks of Realkredit Danmark and Danica Pension. At Realkredit Danmark, the financing of mortgage loans by the issuance of listed mortgage bonds with matching terms eliminates liquidity risk in all material respects. Danica Pension's balance sheet comprises long-term life insurance obligations and assets of which a large portion is invested in easily marketable bonds and shares. As both companies are subject to statutory limits on their exposure to Danske Bank, their liquidity is not included in liquidity management at Group level.

Group-level liquidity management is based on monitoring and management of the Group's short- and long-term liquidity risks and builds on the following four areas: operational liquidity risk, liquidity stress tests, 12-month liquidity and structural liquidity risk.

#### Operational liquidity risk

The Group's operational liquidity risk management is intended mainly to ensure that the Group always has a liquidity buffer that can absorb the net effects of current transactions and changes in liquidity in the short term. For liquidity management purposes, the Group distinguishes between liquidity in Danish kroner and liquidity in other currencies.

The Group manages its operational liquidity risk on the basis of limits approved by the Board of Directors, including separate foreign currency liquidity limits. Liquidity is calculated on the basis of the Group's known future receipts and payments from current transactions. The calculation factors in the estimated effects on the Danish kroner liquidity of the Danish government's receipts and payments. Bond holdings that can be used in repo transactions with central banks are considered liquid assets. To take account of the potential risk of drawings under irrevocable loan commitments, the Group factors in the unutilised portion of the facilities in the calculation of liquidity risk.

The Group's strong position in the Danish market gives it a substantial deposit surplus that is a valuable and stable source of funding. The Group uses limits and overnight targets for each key currency to manage operational liquidity risk. The Group also monitors the maturity profiles of commercial paper, certificates of deposit and medium-term notes to ensure that the maturing liabilities do not become too large at any particular time.

### Liquidity stress tests

The Group conducts stress tests that estimate liquidity risks in various scenarios in order to measure its immediate liquidity risk level and to ensure that it has enough time to respond to potential crises. Stress tests are conducted every month and cover a time horizon of up to six months.

The stress tests comprise various scenarios, including three standard scenarios: a scenario specific to the Group, a general market crisis and a combination of the two. The Group also conducts a stress-to-fail test.

The scenarios assume that the Group does not reduce its lending activities. This means that existing lending activities are maintained and require funding. The Group also factors in potential liquidity outflows from unutilised but irrevocable loan commitments. Bond holdings that can be used in repo transactions with central banks are considered liquid assets. The Group uses scenario-specific haircuts on the bond portfolio. The degree of possible refinancing varies, depending on the scenario as well as on the specific funding source. For example, the Group will have fewer opportunities for issuing commercial paper in a scenario where the Group's short-term rating is downgraded than in a mild recession scenario.

The Group monitors the diversification of funding sources by product, currency, maturity and counterparty to ensure that it has a funding base that provides the best possible protection if markets come under pressure.

### 12-month liquidity

In its "Bank Financial Strength Ratings: Global Methodology", Moody's has set various classification requirements for banks' liquidity management. One requirement is that a stress test of the 12-month liquidity curve must show a generally positive curve. Liquidity calculations must assume, among other factors, that the Group is cut off from capital markets. No access to capital prevents the Group from refinancing net debt to credit institutions, issued bonds (including covered bonds), commercial paper and subordinated debt at maturity. On the other hand, the stable deposit base will remain an available funding source that can be refinanced when the loans mature. The analysis also assumes only a moderate reduction in business activities. The Group's liquidity buffer is included in the liquidity curve after haircuts that depend on the degree of the bonds' liquidity. Off-balance-sheet items are listed at their actual maturity dates. The Group monitors its liquidity reserves to ensure that it is robust against a loss of access to the capital markets. The Group's liquidity calculations generate a positive liquidity curve for 2012, and this means that, assuming the above conditions, the liquidity buffer is large enough for the Group to survive at least 12 months without access to the capital markets.

	1 month	2 months	3 months	4 months	5 months	6 months	7 months	8 months	9 months	10 months	11 months	12 months
End-2011	217	202	184	186	158	156	126	124	123	123	125	126
End-2010	225	151	147	142	136	117	117	113	92	92	90	91

#### Structural liquidity risk

The Group's structural liquidity risk reflects its long-term liquidity mismatch. The purpose of managing structural liquidity risk is to avoid an unnecessarily large need for funding in the future. Quantifying such risk is important when the Group plans its funding activities.

Structural liquidity risk management is based on a breakdown by maturity of assets, liabilities and off-balance-sheet items. The assumptions are generally the same as for the 12-month liquidity curve, except for the condition that it is not possible to reduce the Group's business activities, and this means that all loans must be extended.

The Group's large bond holdings, which have varying maturities, are a significant component in the calculation of structural liquidity. Most of the portfolio is ultra-liquid and can be used as collateral in repo transactions with central banks (94% at the end of 2011). This part of the portfolio is therefore included in the calculation as immediate liquidity. On the other hand, bond holdings that are used as collateral for the settlement of the Group's current transactions, for instance clearing, are classified as illiquid bonds and are excluded from immediate liquidity.

In addition, the structural liquidity position comprises a deposit surplus in Danish kroner and a deposit shortfall in other currencies. The shortfall is covered by long-dated bond issues.

#### Funding sources

The Group monitors its funding mix to ensure that it is well-diversified in terms of funding sources, maturities and currencies. A well-balanced portfolio of liabilities is intended to generate a stable flow of funding and provides protection against market disruptions. The tables below break down funding sources by type of liability and currency, including funding in the form of bonds issued by Realkredit Danmark.

Funding sources by type of liability [%]	2011	2010

#### Insurance risk

The Group's insurance risk consists of all risks related to its investment in the Danica group, including financial risks (market risk mainly) and actual life insurance risks.

Net income from insurance business is derived primarily from

- the risk allowance and guarantees for conventional life insurance
- unit-linked business
- health and accident business
- return on assets funded by Danica Pension's shareholders' equity

The risk allowance is the annual payment that Danica Pension may book from its conventional life insurance business (Danica Traditionel), and it currently amounts to 0.50-0.85% of technical provisions. The risk allowance is governed by the Danish Financial Supervisory Authority's (FSA) executive order on the contribution principle and may be booked only if the technical basis permits and if the bonus potential of paid-up policies is not used for loss absorption. The technical basis is essentially the investment return on policyholders' funds less the change in life insurance provisions. The investment return on policyholders' funds less interest accrual to customers, the risk allowance and changes in technical provisions is transferred to the collective bonus potential. The collective bonus potential is a capital buffer owned by the policyholders that can be used to absorb losses. If the risk allowance cannot be booked, in whole or in part, or the Group must cover losses that cannot be absorbed by the collective bonus potential, the amounts are booked to a shadow account and may be recovered at a later date when the technical basis permits.

On 1 January 2011, the Danish FSA's amended executive order on the contribution principle took effect. Insurance policies must now be divided into groups with uniform interest rates, insurance risk and expenses. In addition, the policyholders' capital buffer, the collective bonus potential, is divided among these groups. As this will increase the risk for the Group, other things being equal, Danica Pension has prepared new investment and hedging strategies for each group, limiting the increase in risk exposure. Under the amended order, the risk allowance is determined for each group individually.

The extraordinary market conditions in the fourth quarter of 2011 prompted the Danish FSA to allow an adjustment of a component of the discount yield curve used to calculate life insurance obligations. The discount yield curve is fixed on the basis of a zero-coupon yield curve estimated on the basis of euro swap market rates to which is added the yield spread between Danish and German government bonds and a mortgage yield curve spread. As a result of the FSA's decision, the Group is now allowed to calculate the yield spread between Danish and German government bonds as a 12-month moving average. This means that daily market changes are reflected in the spread but the effect of fluctuations is reduced. The adjusted discount rates reduced life insurance provisions at the end of 2011 by a total of DKK 2.8 billion.

### Financial risks

Market risk involves the risk of losses on assets funded by Danica Pension's shareholders' equity and the risk of losses on policies with guaranteed benefits arising because the fair value of assets and liabilities allocated to these contracts changes. Such changes in fair value can be caused by changes in interest rates, exchange rates, equity prices, property prices, credit spreads and market liquidity as well as by issuer or counterparty defaults. Insurance obligations carry interest rate risk owing to the guarantees issued. For example, if market interest rates drop, the market value of obligations increases.

The Group monitors the market risk and has set maximum risk targets for each asset class. Danica Pension conducts internal stress tests to ensure that it can withstand significant losses on its equity and credit exposure and substantial changes in interest rates.

The risk related to the relationship between investment assets and guaranteed benefits is reduced by keeping the interest-rate sensitivity of the bond portfolio at a suitable level and by using derivatives.

The credit spread risk on bond holdings was modest, since, at end-2011, about 71% of the portfolio consisted of government and mortgage bonds of high quality (AA-AAA ratings from the international rating agencies) or unrated mortgage bonds issued by institutions with equally high ratings, and only 9% of the portfolio was invested in sub-investment grade bonds. This risk is managed as an equity market risk.

Concentration risk and counterparty risk are very limited because of internal investing restrictions and collateral management agreements for derivatives.

69.823

785

10.765

29,206

155.379

Danica Pension hedges most of its foreign exchange risk. At the end of 2011, 70% was hedged (31 December 2010: 73%).

2.558

42,242

Total

Early surrender by policyholders may require Danica Pension to sell some of its investment assets at a low price. Danica Pension reduces this liquidity risk by investing a substantial share of funds in liquid bonds and shares. The liquidity risk is also modest, since Danica Pension can, to some extent, adapt the timing of payment upon surrender of pension schemes to the situation in the financial markets.

Policyholders assume the risk on investment assets under unit-linked contracts (Danica Link and Danica Balance) with the exception of policies with investment guarantees. At the end of 2011, 15% of policyholders had investment guarantees. The guarantees do not apply until the time of retirement and are paid for by an annual fee. Danica Pension manages the risk on financial guarantees in Danica Link with financial derivatives and by adjusting the investment allocation during the last five years before payment. It manages the risk on guarantees in Danica Balance by adjusting the investment allocation for the individual policies. Because of these hedging and risk management strategies, Danica Pension considers the investment risk on guarantees in unit-linked products to be very modest.

Danica Pension has set a separate investment strategy for shareholders' equity.

### Life insurance risks

Life insurance risks are linked to trends in mortality, disability, illness and other variables. For example, an increase in life expectancy lengthens the period during which benefits are payable under certain pension plans. Similarly, trends in mortality, sickness and recoveries affect life insurance and disability benefits. Life expectancy, or increases in life expectancy, is the most significant life insurance risk.

### (DKK billions)

The various risk elements are subject to ongoing actuarial assessment for the purpose of calculating insurance obligations and making relevant business adjustments. Life insurance obligations are calculated on the basis of expected future mortality rates. Estimates are based on empirical data from Danica Pension's own portfolio of insurance contracts. The rates reflect a likely increase in life expectancy in the future.

For health and accident policies, insurance obligations are calculated on the basis of expected future recoveries and reopenings of old claims. Estimates are based on empirical data from Danica Pension's own portfolio of insurance contracts and are updated regularly.

To mitigate life insurance risk, Danica Pension uses reinsurance to cover a small portion of the risks related to mortality and disability. Danica Pension also reinsures the risk of losses due to disasters.

#### Sensitivity analysis

The sensitivity indicators show the effect on shareholders' equity, the collective bonus potential and the bonus potential of paid-up policies generated by separate changes in interest rates, equity prices, real property prices and actuarial assumptions. If the bonus potential is insufficient to cover policyholders' share of the effect, the shortfall will be covered by funds allocated from shareholders' equity.

Of the two interest rate scenarios, the rate increase is the most severe for Danica Pension. The combined effect of a 0.7 of a percentage point rise in interest rates, a 12% decline in equity prices, an 8% decline in property prices, VaR for foreign exchange risk (99.0%), and an 8% loss on counterparties would reduce the collective bonus potential by DKK 0.2 billion, increase the bonus potential of paid-up policies by DKK 0.7 billion and reduce shareholders' equity by DKK 3.0 billion. Future rate increases would be favourable, however, as it would be easier to pay guaranteed benefits.

The sensitivity analysis reflects the Group's increased exposure to changes in market conditions because the collective bonus potential and the bonus potential of paid-up policies were reduced in 2011 and therefore to a lesser degree can be used to cover any future negative investment returns.

	Change in	Change in	
	collective bonus	bonus potential of	Change in
31 December 2011	potential	paid-up policies	equity
Interest rate increase of 0.7 of a percentage point	-0.2	3.1	-0.5

### (DKK millions)

### Pension risk

The Group's pension risk is the risk of a pension shortfall in the Group's defined benefit plans that requires it to make additional contributions to cover pension obligations to current and former employees.

The use of financial derivatives to mitigate inflation and interest rate risks is a key element of risk management. By matching the return on the derivatives and the associated assets with expected future pension obligations, the Group minimises its pension risk.

Because of the complexity of its pension obligations, the Group manages market risk on the basis of special follow-up and monitoring principles – so-called business objectives. Quarterly risk reports follow up on the objectives and analyse the financial status of the individual plans on the basis of sensitivity analyses and the Value at Risk (VaR) measure. The objectives include specific limits that indicate acceptable risk exposure levels.

For each pension plan, the Group calculates net funding and the sensitivity of net funding to changes in interest rates, equity prices and life expectancy. Net funding expresses the difference between the market value of the assets and the present value of the pension obligations.

Sensitivity analysis	Change	Effect 2011	Effect 2010
Equity prices	-20%	-950	-995
Interest rate	+1/-1%	+798/-518	+1,144/-895
Life expectancy	+1 year	-379	-331

To supplement the sensitivity analyses, the Group calculates the risk of the individual pension plans as a VaR measure. The calculations are based on a long-term horizon with equity price volatility (20%) and correlation between interest rates and equity prices (25%) set at values reflecting normal market data. The duration of the pension obligations is reduced by half, as empirical data show that inflation risk reduces the interest rate risk on the obligations by approximately 50% in the long term.

At the end of 2011, VaR was DKK 2,966 million (31 December 2010: DKK 2,650 million). The VaR measure is calculated at a confidence level of 99.97% and with a time horizon of one year. The calculation is adjusted for inflation risk.

Note 35 provides additional information about the Group's defined benefit plans.

The ratios and key figures are defined in the Danish FSA's Executive Order on Financial Reports for Credit Institutions and Investment Companies, etc. Share ratios have been divided by a factor of 1.0807 to reflect the share capital increase in April 2011.

### FINANCIAL STATEMENTS - DANSKE BANK A/S

### (DKK millions)

The financial statements of the Parent Company, Danske Bank A/S, are prepared in accordance with the Danish Financial Business Act and the Danish FSA's Executive Order No. 17 of 11 January 2011 on Financial Reports for Credit Institutions and Investment Companies, etc.

The rules are identical to the Group's IFRS compliant valuation and measurement principles with the following exceptions:

- · Domicile property is measured (revalued) at its estimated fair value through Other comprehensive income
- The corridor method is not applied to pension obligations
- The available-for-sale financial assets category is not used

The estimated fair value of domicile property is determined in accordance with the Danish FSA's Executive Order on Financial Reports for Credit Institutions and Investment Companies, etc. Available-for-sale financial assets are measured at fair value through profit or loss.

Holdings in subsidiary undertakings are measured on the basis of the equity method, and tax payable by these undertakings is expensed under Income from associates and group undertakings.

The format of the Parent Company's financial statements is not identical to the format of the consolidated financial statements prepared in accordance with IFRSs.

The table below shows the differences in net profit and shareholders' equity between the IFRS consolidated financial statements and the Parent Company's financial statements presented in accordance with Danish FSA rules.

Total

The remuneration of the Executive Board includes remuneration for membership of the board of directors of one or more of the Group's subsidiaries. Such remuneration is deducted from the contractual remuneration.

Under the Danish Act on State-Funded Capital Injections into Credit Institutions, only 50% of management's salaries is tax deductible until the capital raised has been repaid. In 2011, this deduction amounted to DKK 24 million (2010: DKK 18 million).

### Note (DKK millions)

### Development in lending activities in Denmark in 2011

In May 2009, Danske Bank A/S raised subordinated loan capital in the form of hybrid capital of DKK 24 billion from the Danish state. Under Danish law, banks that raise state-funded capital must publish semi-annual statements on developments in their Danish lending activities.

Danske Bank A/S grants loans to personal and business customers in a number of countries. The table below shows the trend in loans and advances, irrevocable loan commitments and guarantees before impairment charges for business customers (including the public sector) and personal customers of Danske Bank A/S.

#### Note

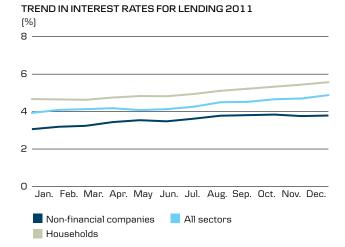

Some of Danske Bank A/S's markets saw considerably deteriorating economic conditions in the second half of 2011. The European (cont'd) sovereign debt crisis had an adverse effect on personal and business customer confidence, also in countries outside the euro zone, resulting in low demand for credit.

Danske Bank A/S grants credits on the basis of information about customers' individual financial circumstances and monitors customers' financial situation on an ongoing basis to assess whether the basis for credit has changed. Facilities should match the customers' financial situation, including earnings, capital and assets, and business volume with Danske Bank to a reasonable degree, and customers should be able to substantiate their repayment ability. Collateral is usually required for credit facilities. Danske Bank A/S exercises caution before granting credit facilities to businesses in troubled or cyclical industries. The Group monitors credit facilities regularly through its credit systems and procedures.

Danske Bank A/S supported its creditworthy customers throughout the second half of 2011. Danske Bank A/S adjusted lending terms for property investors in the second half of 2011. Danske Bank A/S remains focused on certain industries, including the property and agricultural sectors.

More information about the Group's lending policy, rating of customers and credit risk management is provided in section 4 of Risk Management 2011, published on 9 February 2012. Risk Management 2011 is available at www.danskebank.com/ir. The publication is not covered by the statutory audit.

In the second half of 2011, Danske Bank A/S increased its lending rates for variable-rate loans fixed with reference to the Danish central bank's certificate of deposit rate. The deposit rates for certain variable-rate deposits were lowered in step with the lowering of rates by the Danish central bank. The interest rate levels for households and non-financial business customers were higher at the end of 2011 than at the beginning of the year.

Danish business customers' demand for credit, measured in terms of the loan amounts applied for, fell 23% from the level in the first half of 2011. For existing customers, the number of loan applications fell 11% in the second half of the year. Demand from new customers also fell in the same period. The share of approved applications from existing customers was unchanged at 90% in the second half of 2011, while the share of approved applications from new customers fell.

Danish personal customers' demand for credit fell 20% below the level in the first half of 2011. Also for new customers, demand for credit fell in the second half of the year. The share of approved applications was 93% in the second half of 2011, against 94% in the first half of 2011.

#### Note (DKK millions)

### Note

### 25 Subordinated debt

Subordinated debt consists of liabilities in the form of subordinated loan capital and hybrid capital, which, in the event of Danske Bank's voluntary or compulsory winding-up, will not be repaid until the claims of ordinary creditors have been met. Hybrid capital ranks below subordinated loan capital. Early redemption of subordinated debt must be approved by the Danish FSA.

Subordinated debt is included in the capital base in accordance with section 128 of the Danish Financial Business Act.

### Note [DKK millions] 2011 2010

### 26 Assets deposited as collateral

At the end of 2011, Danske Bank A/S had deposited securities worth DKK 45,606 million as collateral with Danish and international clearing centres and other institutions (2010: DKK 54,940 million).

In repo transactions, which involve selling securities to be repurchased at a later date, the securities remain in the balance sheet, and the amounts received are recognised as deposits. Repo transaction securities are treated as assets provided as collateral for liabilities. Counterparties are entitled to sell the securities or deposit them as collateral for other loans.

Assets sold in repo transactions		
Bonds at fair value	304,745	215,063
Shares etc.	-	-
Total	304,745	215,063
Total collateral deposited for subsidiary undertakings	607	536

At the end of 2011, Danske Bank A/S had provided cash and securities worth DKK 68,463 million as collateral for derivatives transactions (2010: DKK 38,061 million).

Danske Bank A/S had registered loans and advances worth DKK 172,325 million and other assets worth DKK 8,108 million as collateral for covered bonds at the end of 2011 (2010: DKK 123,308 million and DKK 4,381 million, respectively).

### 27 Contingent liabilities

The Group uses a variety of loan-related financial instruments to meet the financial requirements of its customers. These include loan offers and other credit facilities, guarantees and instruments that are not recognised in the balance sheet.

### Guarantees and other liabilities

Guarantees etc.		
Financial guarantees	6,958	7,719
Mortgage finance guarantees	50,379	51,583
Registration and remortgaging guarantees	9,478	21,542
Other guarantees	90,773	163,028
Total	157,588	243,872
Other liabilities		
Irrevocable loan commitments shorter than 1 year	59,140	63,609
Irrevocable loan commitments longer than 1 year	93,656	102,006
Other obligations	495	653
Total	153,291	166,268

In addition to the credit exposure relating to lending activities, loan offers and uncommitted credit facilities amounted to DKK 445,043 million (2010: DKK 444,123 million). These items are included in the calculation of risk-weighted assets in accordance with the Capital Requirements Directive.

Owing to its business volume, Danske Bank is continually a party to various lawsuits and disputes. In view of its size, Danske Bank does not expect the outcomes of pending lawsuits and disputes to have any material effect on its financial position.

A limited number of employees are employed under terms which grant them, if they are dismissed before reaching their normal retirement age, an extraordinary severance and/or pension payment in excess of their entitlement under ordinary terms of employment. As the sponsoring employer, Danske Bank is also liable for the pension obligations of a number of company pension funds.

Sale of shares	-	-	-	-	-	-	-	-	-	2

Related parties with significant influence include shareholders with holdings exceeding 20% of Danske Bank A/S's share capital. The A.P. Møller and Chastine Mc-Kinney Møller Foundation and companies of the A.P. Møller – Maersk Group, Copenhagen, hold 22.84% of the share capital. Note 22 of the consolidated financial statements lists holdings in associates. The consolidated financial statements specify group holdings under Group holdings and undertakings. The Board of Directors and Executive Board columns list the personal facilities, deposits, etc. held by members of the Board of Directors and the Executive Board and their dependants and facilities with businesses in which these parties have a controlling or significant influence.

In 2011, the average interest rates on credit facilities granted to members of the Board of Directors and the Executive Board were 2.2% [2010: 2.2%] and 2.4% [2010: 2.7%], respectively. Notes 9 and 42 of the consolidated financial statements specify the remuneration and shareholdings of management.

Pension funds set up for the purpose of paying out pension benefits to employees of Danske Bank A/S are also considered related parties. In 2011, transactions with these funds comprised loans and advances in the amount of DKK 3 million (2010: DKK 3 million), deposits in the amount of DKK 121 million (2010: DKK 123 million), derivatives with a positive fair value of DKK 0 million (2010: DKK 0 million), derivatives with a negative fair value of DKK 581 million (2010: DKK 166 million), interest expenses of DKK 3 million (2010: DKK 3 million), and pension contributions of DKK 284 million (2010: DKK 304 million).

Danske Bank A/S acts as the bank of a number of its related parties. Payment services, trading in securities and other instruments, investment and placement of surplus liquidity, and provision of short- and long-term financing are the primary services provided by Danske Bank A/S. In addition, Danske Bank A/S and group undertakings receive interest on holdings, if any, of listed bonds issued by Realkredit Danmark A/S. Note 19 of the consolidated financial statements specifies the Group's holdings of own mortgage bonds.

Danske Bank A/S handles a number of administrative functions, such as IT operations and development, HR management, purchases and marketing activities for group undertakings. Danske Bank A/S received a total fee of DKK 1,619 million for services provided in 2011 (2010: DKK 1,527 million).

The figures above do not include debt to related parties in the form of issued notes. Such notes are bearer securities, which means that Danske Bank does not know the identity of the holders. Danske Bank shares may be registered by name. Related parties' holdings of Danske Bank shares equalling 5% or more of Danske Bank's share capital are determined on the basis of the most recent reporting of holdings to Danske Bank.

Transactions with related parties are settled on an arm's-length basis, whereas transactions with group undertakings are settled on a cost-reimbursement basis.

### STATEMENT BY THE MANAGEMENT

The Board of Directors and the Executive Board (the management) have considered and approved the annual report of Danske Bank A/S for the financial year 2011.

The consolidated financial statements have been prepared in accordance with the International Financial Reporting Standards as adopted by the EU, and the Parent Company's financial statements have been prepared in accordance with the Danish Financial Business Act. Furthermore, the annual report has been prepared in accordance with Danish disclosure requirements for annual reports of listed financial institutions.

In our opinion, the consolidated financial statements and the Parent Company's financial statements give a true and fair view of the Group's and the Parent Company's assets, liabilities, shareholders' equity and financial position at 31 December 2011 and of the results of the Group's and the Parent Company's operations and the consolidated cash flows for the financial year 2011. Moreover, in our opinion, the management's report includes a fair review of developments in the Group's and the Parent Company's operations and financial position and describes the significant risks and uncertainty factors that may affect the Group and the Parent Company.

The management will submit the annual report to the general meeting for approval.

### **AUDITORS' REPORTS**

#### INTERNAL AUDIT'S REPORT

We have audited the consolidated financial statements, pp. 58-161, and the Parent Company financial statements of Danske Bank A/S, pp.162-182, for the financial year 2011. The consolidated financial statements and the Parent Company's financial statements comprise the income statement, statement of comprehensive income, balance sheet, statement of capital and notes for the Group as well as for the Parent Company and the consolidated cash flow statement. The consolidated financial statements have been prepared in accordance with the International Financial Reporting Standards as adopted by the EU, and the Parent Company's financial statements have been prepared in accordance with the Danish Financial Business Act. Furthermore, the consolidated financial statements and the Parent Company's financial statements have been prepared in accordance with Danish disclosure requirements for listed financial institutions.

#### Basis of opinion

We conducted our audit in accordance with the Danish Financial Supervisory Authority's Executive Order on Auditing Financial Undertakings etc. as well as Financial Groups and in accordance with International Standards on Auditing. This requires that we plan and perform the audit to obtain reasonable assurance as to whether the consolidated financial statements and the Parent Company's financial statements are free from material misstatement.

We planned and conducted our audit such that we have assessed the business and internal control procedures, including the risk and capital management implemented by the management, aimed at the Group's and the Parent Company's reporting processes and major business risks.

An audit involves performing procedures to obtain audit evidence about the amounts and disclosures in the consolidated financial statements and the Parent Company's financial statements. The procedures selected depend on the auditor's judgment, including the assessment of the risks of material misstatement of the consolidated financial statements and the Parent Company's financial statements, whether due to fraud or error. In making those risk assessments, the auditor considers internal control relevant to the preparation of consolidated financial statements and Parent Company financial statements that give a true and fair view in order to design procedures that are appropriate in the circumstances. An audit also includes evaluating the appropriateness of accounting policies used and the reasonableness of accounting estimates made by the management, as well as evaluating the overall presentation of the consolidated financial statements and the Parent Company's financial statements.

We believe that the audit evidence we have obtained is sufficient and appropriate to provide a basis for our audit opinion.

Our audit did not result in any qualification.

#### Opinion

In our opinion, the consolidated financial statements and the Parent Company's financial statements give a true and fair view of the Group's and the Parent Company's assets, liabilities, shareholders' equity and financial position at 31 December 2011 and of the results of the Group's and the Parent Company's operations and consolidated cash flows for the financial year 2011 in accordance with the International Financial Reporting Standards as adopted by the EU in respect of the consolidated financial statements, in accordance with the Danish Financial Business Act in respect of the Parent Company's financial statements, and in accordance with Danish disclosure requirements for listed financial institutions.

Furthermore, we believe that the business and internal control procedures, including the risk and capital management implemented by the management, aimed at the Group's and the Parent Company's reporting processes and major business risks, operate effectively.

Copenhagen, 9 February 2012

Jens Peter Thomassen Group Chief Auditor

### **AUDITORS' REPORTS**

#### INDEPENDENT AUDITORS' REPORT

To the shareholders of Danske Bank A/S

#### Independent auditors' report on the consolidated financial statements and the Parent Company's financial statements

We have audited the consolidated financial statements, pp. 58-161, and the Parent Company financial statements of Danske Bank A/S, pp. 162-182, for the financial year 2011. The consolidated financial statements and the Parent Company's financial statements comprise the income statement, statement of comprehensive income, balance sheet, statement of capital and notes for the Group as well as for the Parent Company and the consolidated cash flow statement. The consolidated financial statements have been prepared in accordance with the International Financial Reporting Standards as adopted by the EU, and the Parent Company's financial statements have been prepared in accordance with the Danish Financial Business Act. Furthermore, the consolidated financial statements and the Parent Company's financial statements have been prepared in accordance with Danish disclosure requirements for listed financial institutions.

#### Management's responsibility for the consolidated financial statements and the Parent Company's financial statements

Management is responsible for preparing consolidated financial statements and Parent Company financial statements that give a true and fair view in accordance with the International Financial Reporting Standards as adopted by the EU (the consolidated financial statements), the Danish Financial Business Act (the Parent Company's financial statements) and Danish disclosure requirements for listed financial institutions and for such internal control that management determines is necessary to enable the preparation of consolidated financial statements and Parent Company financial statements that are free from material misstatement, whether due to fraud or error.

#### Auditors' responsibility

Our responsibility is to express an opinion on the consolidated financial statements and the Parent Company's financial statements based on our audit. We conducted our audit in accordance with International Standards on Auditing and additional requirements under Danish audit regulation. This requires that we comply with ethical requirements and plan and perform the audit to obtain reasonable assurance as to whether the consolidated financial statements and the Parent Company's financial statements are free from material misstatement.

An audit involves performing procedures to obtain audit evidence about the amounts and disclosures in the consolidated financial statements and the Parent Company's financial statements. The procedures selected depend on the auditor's judgment, including the assessment of the risks of material misstatement of the consolidated financial statements and the Parent Company's financial statements, whether due to fraud or error. In making those risk assessments, the auditor considers internal control relevant to the preparation of the consolidated financial statements and the Parent Company's financial statements that give a true and fair view in order to design procedures that are appropriate in the circumstances, but not for the purpose of expressing an opinion on the effectiveness of internal control. An audit also includes evaluating the appropriateness of accounting policies used and the reasonableness of accounting estimates made by the management, as well as evaluating the overall presentation of the consolidated financial statements and the Parent Company's financial statements.

We believe that the audit evidence we have obtained is sufficient and appropriate to provide a basis for our audit opinion.

Our audit did not result in any qualification.

#### Opinion

In our opinion, the consolidated financial statements and the Parent Company's financial statements give a true and fair view of the Group's and the Parent Company's assets, liabilities, shareholders' equity and financial position at 31 December 2011 and of the results of the Group's and the Parent Company's operations and consolidated cash flows for the financial year 2011 in accordance with the International Financial Reporting Standards as adopted by the EU in respect of the consolidated financial statements, in accordance with the Danish Financial Business Act in respect of the Parent Company's financial statements, and in accordance with Danish disclosure requirements for listed financial institutions.

#### Statement on the management's report

Pursuant to the Danish Financial Business Act, we have read the management's report. We have not performed any other procedures in addition to the audit of the consolidated financial statements and the Parent Company's financial statements. On this basis, it is our opinion that the information given in the management's report is consistent with the consolidated financial statements and the Parent Company's financial statements.
