Company Overview

Who We Are

Vyopta is Cisco Development partner focused on software applications that integrate TelePresence video into mission critical business processes. Vyopta has decades of experience in enterprise software development and video communications.

What We Do

Vyopta *simplifies*, *adapts* and *optimizes* your organizations use of TelePresence video communications. We help to drive adoption of video within your organization by simplifying the process, while adapting the way video is used to your organizations business workflows and processes. Then, with our reporting and analytics tools, we enable you to review performance indicators and increase the effectiveness of your organization's investment in video.
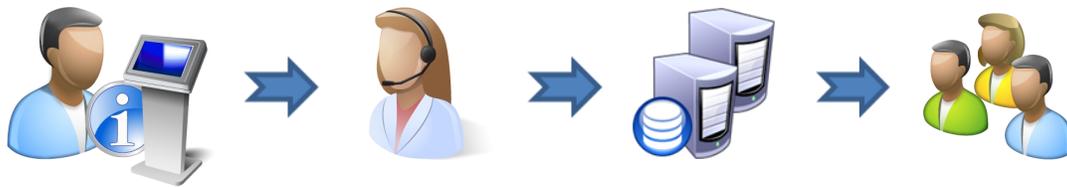

How Do We Do It

Vyopta's software applications are designed to work together seamlessly to manage Cisco TelePresence workflows from beginning to end. We provide an intuitive universal interface for both an organization's employees and also their potential customers, whether the application is a conference room or a complex virtual specialist integration. With complex integrations, we provide an application layer that manages call workflows to ensure that callers are connected to the right person quickly. Then, throughout the process, our products also track the usage and other defined data points to provide technical and business administrators with an accurate view to their operations.

Simplify. Adapt. Optimize.
Enterprise-class Video in Business

OurSolutions

vAdapt

Vyopta's vAdapt software is the core application for our solutions. Through vAdapt, we provide a flexible platform upon which our clients can integrate TelePresence video into sales and service delivery processes. Key benefits include:

- Increased access specialized services and experts
- Live TelePresence video connection
- Reduced operational costs
- Increased sales and service efficiencies
- Ability to be embedded into existing environments
- Control of video compositing capabilities (if available) for enhanced presentations

vAnalytics

Vyopta offers a reporting and analytics application that provides actionable insight for your video communications investment. Our solution is integrated into the vAdapt solution, but can also function as a stand alone package. (Server installation or SaaS models available). Key benefits include:

- Subscription-based enterprise reporting services for comprehensive analysis of video communications systems
- Actionable insight for more effective management and configuration of your enterprise video communications environment to best support business needs
- Presentation of relevant information for all levels of users - from technical to business—in an easy-to-use format
- Allocation of resources more effectively
- Management of the quality of the user experience
- Augmentation of Cisco TelePresence Management Suite (TMS) reporting capabilities

vControl®

Originally released as the first ever TANDBERG call control application, vControl has evolved to support both the iOS and Windows operations sytems and to provide expanded call control capabilities for Cisco TelePresence systems. Key benefits include:

- An intuitive universal graphical interface available on iOS and Windows platforms
- Simplified control for call initiation and control
- Dynamic video compositing for certain Cisco TelePresence video endpoints
- Administrator management features both on the vControl client application and through a web portal (remote support plus access controls)
