Finance operations are responsible for daily risk management within the limits set by the board.

### **Currency risks**

Currency risks are caused by foreign currency imports and exports, by the financing of foreign subsidiaries and by equity in foreign currency.

The Group manages the currency risk inherent in cash flows by keeping foreign currency income and expense cash flows in the same currency, and by matching them simultaneously to the extent possible. If matching is not possible, a portion of the open position may be hedged.

Foreign currency balance sheet items are hedged if the sum of currency exceeds EUR 500,000. Instruments used in hedging include forward contracts, currency options, NDF contracts, and their combinations. The protection level of currency positions should be between 30–70 percent, considering the current economic trends and the predicted currency prospects as well as the functionality of each currency's hedge market. In extraordinary hedging market circumstances the company may deviate from the guidelines above.
