

Press release LightLab Sweden AB (publ) 17-12-2013

## **LightLab and Norrtelje Elektronikpartner (NEP) sign licensing agreement**

LightLab offers partners the chance to license their unique EEE Light™ Technology. The three E's represent the technology's three biggest advantages: **energy** efficiency, **environmental** friendliness and **economical** production.

LightLab has signed a licensing agreement with Norrtelje Elektronikpartner (NEP) for the development of a solution for wireless lighting control. The licensing agreement involves a Bluetooth-based wireless technology that gives the user the ability to control their lights from a smartphone or tablet.

The product will be launched as an app during Q1 2014.

LightLab will offer the new solution as part of their EEE Light Technology. NEP will sell the solution to customers outside LightLab's market.

"Signing our first commercial agreement is the logical next step in our company's development," said LightLab CEO Jan-Erik Lennefalk. "It also demonstrates that our R&D efforts are delivering results. NEP and LightLab have been collaboratively developing solutions based on our unique lighting technology for a long time. This new wireless communication solution is a great example of what LightLab and our partners can create using EEE Light."

"It's an exciting product that we see creating interesting new business opportunities, particularly within the Internet of Things," said NEP's Anders Söderbärg. "We look forward to developing more solutions like this in collaboration with LightLab."
