

## **MDxHealth Announces Agreement with Teva Pharmaceuticals for Commercialization of Two Cancer Tests in Israel**

### **ConfirmMDx for Prostate Cancer and PredictMDx for Glioblastoma Made Available Through Teva's Extensive Oncology Network**

**IRVINE, CA, and HERSTAL, BELGIUM** — 8:00 AM, January 23, 2014 MDxHealth SA (NYSE Euronext: MDXH), a leading molecular diagnostic company that develops and commercializes epigenetic tests to improve the diagnosis and treatment of cancer patients, today announced that it has signed an exclusive agreement with Teva Pharmaceuticals Ltd. for commercialization of ConfirmMDx<sup>®</sup> for Prostate Cancer and PredictMDx<sup>®</sup> for Glioblastoma tests in Israel. ConfirmMDx provides physicians with actionable information that helps improve patient care, particularly the avoidance of unnecessary repeat prostate biopsies. The PredictMDx test is used to identify glioma patients who have methylation of the MGMT (O6-Methylguanine-DNA Methyltransferase) gene. In clinical studies, these patients have shown the potential to respond better to certain chemotherapeutic drugs.

“This partnership with Teva means that these important tests will now become available to cancer patients in Israel, our second market after the U.S.,” said Dr. Jan Groen, CEO of MDxHealth. “We are delighted that Teva has agreed to invest its significant commercialization resources into our unique cancer products, expanding access to a new and diverse patient population.”

Under the terms of this three-years agreement, Teva Pharmaceuticals Industries will be the exclusive distributor of both tests in Israel. Samples will be sent to MDxHealth's CLIA-registered laboratory in Irvine, California for analysis. Teva will reimburse MDxHealth for all the testing services.

#### **About ConfirmMDx<sup>®</sup> for Prostate Cancer**

Over 975,000 American men are diagnosed with a negative prostate biopsy each year; however approximately 25-35% of those men receive false-negative results. Under the current standard of care, prostate biopsy procedures consisting of 10-12 needle biopsy cores only sample approximately 1% of a man's prostate. This approach leaves men at risk of occult cancer, leading to a high rate of repeat biopsies, often on cancer-free men. There is an unmet medical need for a clinically effective diagnostic test to address this dilemma.

ConfirmMDx for Prostate Cancer is able to detect an epigenetic field effect or 'halo' associated with the cancerization process at the DNA level. This "halo" around a cancer lesion can be present despite cells having a normal appearance under the microscope. Thus ConfirmMDx for Prostate Cancer aids urologists in identifying truly negative men who may forego an unnecessary repeat biopsy procedure.

## About PredictMDx® for Glioblastoma

MDxHealth's PredictMDx for Glioblastoma (MGMT) test provides actionable information to oncologists seeking to provide personalized treatment of patients with brain cancer. The test assesses the methylation status of the MGMT gene, which is crucial to promoting DNA repair. If the MGMT gene is methylated, cancer patients have shown improved response to alkylating drug therapy. Studies on thousands of patients have shown that PredictMDx for Glioblastoma can help identify patients that are likely to respond to the most commonly used class of brain cancer drugs (alkylating agents).

## About MDxHealth®

MDxHealth is a leading molecular diagnostic company that develops and commercializes epigenetic tests to support cancer treatment. The company's tests are based on proprietary gene methylation (epigenetics) technology and assist physicians with the diagnosis of cancer, prognosis of recurrence risk, and prediction of response to a specific therapy.
