ROUND TABLE SESSION FOCUSING ON IMAGING BIOMARKERS AT WORLD CONGRESS

The imaging biomarker BSI is highly interesting in many ways, a fact that became evident during the ASCO 2014 Genitourinary Cancers Symposium in San Francisco. This congress is one of the most important prostate cancer congresses in the world and brings together many scientists and physicians within the area.

The great interest in imaging biomarkers was also shown by the fact that it was selected as one of three hot topics for a round table session, "Quantitative imaging of bone metastases in prostate cancer for prognostication, disease progression and response to treatment".

- The need of new imaging biomarkers within treatment of advanced prostate cancer is great. One area of use is monitoring of patients during treatment. Two studies which were presented on the congress show that BSI is a useful biomarker within this area, says Magnus Aurell, CEO EXINI Diagnostics AB.

Increase in bone scan index during abiraterone treatment in relation to reduced survival in mCRPC patients.

About EXINI Diagnostics AB (publ)

EXINI Diagnostics AB (publ) offers advanced solutions for medical decision support to hospitals worldwide. The system is based on advanced image analysis by artificial intelligence and can make its own interpretation of medical images and provide diagnostic suggestions. In this way the system is used as a decision support for the diagnosing doctor. EXINI is working with products for the diagnosis of some of the most frequent endemic diseases such as coronary heart disease, cancer, dementia and Parkinson's disease. The company was founded in 1999 by Professor Lars Edenbrandt. EXINI is listed on the stock market NASDAQ OMX First North and has about 500 shareholders. Principal owner is Bo Håkansson. Thenberg & Kinde Fondkommission AB acts as Certified Adviser.
