

PRESS RELEASE Helsingborg 6th March 2008

Nederman receives major order for equipment used in car inspection centres in Turkey

Nederman has received an order worth around SEK 10 million for exhaust extraction equipment for all car inspection centres in Turkey. The order means that Nederman will equip 188 inspection sites for cars and other vehicles in 81 towns in the country.

The systems to be delivered are the same type used by the Swedish vehicle inspection authority. The project has been coordinated in cooperation with Nederman's agent in Turkey, Havak Endustri Tesisleri Tic. Ltd.

The first delivery took place in January 2008 and all the units should be in operation around the first half of 2008. Installation work will be performed by Turkish companies and overseen by Nederman's agent, Havak.

Aurel Stan, Regional Manager: "Nederman was appointed as sole supplier to all units amid tough competition both inside Turkey and internationally. The three decisive factors were functionality, quality and delivery reliability. Nederman's financial strength and our extensive experience of similar installations were the other decisive factors. Users and decision makers have even visited the Swedish inspection authority to see our equipment in operation.

Turkey is tightening up its environmental legislation to adapt to existing legislation in the EU. The current state-run organization is being replaced by a newly formed company that includes, TUV of Germany as the main owner. The Turkish government will be a minority owner. The TUV group of Germany is a company group active within safety and quality application in over 60 countries.
