Fingrid Group's annual review and financial statements 2007

Total electricity consumption in Finland in 2007 amounted to 90.3 terawatt hours (90 TWh in 2006), of which Fingrid transmitted 68.4 terawatt hours in its grid. Electricity consumption increased by 0.3 per cent on the previous year.

Revenue of the Fingrid Group in 2007 was 335 million euros (351 million euros in 2006).

The operating profit of the group was 91 (80) million euros, which contains 12 (-18) million euros of positive change in the fair value of electricity derivatives. Operating profit excluding the change in the fair value of electricity derivatives was 79 (98) million euros. The Group's profit for the year was 42 (38) million euros.

The return on investment was 7.3 (6.4) per cent and the return on equity 10.3 (10.4) per cent. The equity ratio was 27.5 (25.5) per cent at the end of the review period.

The Group's gross capital expenditure in 2007 was 79 million euros (70 million euros).

There has been no material events or changes in Fingrid's business or financial situation after the closing of the final year. The financial result for the current year is expected to decrease somewhat on the previous year as a result of increased expenses. The grid tariff was raised by 4.5 per cent at the beginning of 2008.

These financial statements have been audited. Annual review and financial statements are attached.

REPORT OF THE BOARD OF DIRECTORS

Operating environment

Total electricity consumption in Finland in 2007 was 90.3 terawatt hours (90 terawatt hours in 2006), which was 0.3 per cent more than in the previous year. With temperature and calendar adjustment, electricity consumption rose by 1 per cent. A total of 68.4 terawatt hours (67.3 terawatt hours) of electricity was transmitted in Fingrid's grid.

An all-time record was reached in electricity consumption in Finland in February, with the peak consumption reaching 14,914 megawatts. In accordance with the Finnish act on the security of supply of electricity, Fingrid signed agreements on a power reserve of a total of 600 megawatts. During peak consumption, power reserves were started once to secure continued power balance. As of the beginning of 2007, Fingrid has been publishing the consumption forecast for the next day on its website.

During the early part of the year, electricity transmissions between Finland and Sweden mainly consisted of imports into Finland. Exports from Finland became dominant in the autumn. A good water reservoir situation in Southern Norway but insufficient transmission capacity from Norway to the other Nordic countries led to the continuous separation of system price and area prices in the Nordic countries from the late summer onwards. However, there has been a price area difference between Finland and Sweden for only about 5 per cent of the time.

The Estlink connection between Finland and Estonia was commissioned for commercial operation in early January. Transmissions on this link have mainly comprised imports into Finland.

Transmission capacity between Finland and Russia was reserved in full. Transmission capacity was limited by annual maintenance at the Vyborg DC substation, and by maintenance work at the North West Power Plant near St Petersburg, which continued throughout the latter part of the year. The capacity utilisation rate was 82 per cent. Revised agreements between Fingrid and the Russian transmission and system operator concerning the use of cross-border connections from Russia came into effect at the beginning of 2008.

In September 2007, the European Commission submitted a proposal concerning changes to the shared rules for the electricity market in Europe. For transmission system operators (TSOs), the foremost changes concern ownership of companies, strengthened status of the regulatory authority, and promotion of TSO co-operation. The proposal aims to promote electricity market integration in Europe.

According to the view of the Commission, the market players should have no influence on the TSOs for example in the form of ownership or Board membership. If the Commission proposal concerning regulations for TSO ownership became reality, it would also have an impact on the ownership structure of Fingrid.

Capital expenditure and grid maintenance

Fingrid's gross capital expenditure in 2007 was 79 million euros (70 million euros in 2006). Of this amount, a total of 67 million euros were used for the transmission grid and 7 million euros for reserve power. IT-related capital expenditure was approximately 5 million euros.

Fingrid's capital expenditure projects progressed as planned in 2007, and several projects were brought to conclusion. A 400 kilovolt transmission connection from Olkiluoto to Huittinen was introduced in Western Finland at the end of October. The new line will reinforce the transmission grid and enables the connection of the upcoming Olkiluoto nuclear power unit to the grid and the transmission of electricity from the power plant to consumption. The project with a total value of approx. 36 million euros included almost 100 kilometres of new transmission line with various line arrangements. In the same conjunction, two landscape towers were erected on the line in Eurajoki.

In the late autumn, the Ministry of Trade and Industry granted a cross-border line permit to Fenno-Skan 2, which is the second subsea cable between Finland and Sweden. The connection will be brought to commercial operation at the end of November 2011, one year behind the original plan. The delay is caused by the extended time of delivery of the subsea cable. Once completed, Fenno-Skan 2 will bring 800 megawatts of additional transmission capacity on the DC link between Finland and Sweden, thus improving the functioning of the Nordic electricity market.

The Olkiluoto gas turbine power plant was commissioned in 2007. The plant, constructed jointly by Fingrid and Teollisuuden Voima, serves as a fast reserve for the grid. The project elevated the total capacity of Fingrid's own reserve power plants by 100 megawatts to 615 megawatts. Fingrid also projects to construct another 200 megawatts of new reserve power capacity.

In addition several separate substation and transmission line projects were finalised in 2007, and series compensation in the transmission grid was enhanced. These projects improve the transmission capacity and supply security of the grid.

Approximately 16 million euros were used for the maintenance and local operation of the Finnish grid in 2007. The repair of the Fenno-Skan 1 subsea cable link between Finland and Sweden accounted for a considerable portion of this, 3.2 million euros. Approx. 6 million euros were used for the renovations and maintenance of Fingrid's gas turbine plants.

Research and development were allocated 1 million euros. The foremost R&D projects were related to the real-time monitoring and analysis of low-frequency power oscillations in the grid, development of an electricity market model, analysing corrosion damage in guy rods of transmission line towers, studying the condition of transmission line joints, and measuring and limiting electric and magnetic fields.

Financial result

Revenue of the Fingrid Group in 2007 was 335 million euros (351 million euros in 2006). Grid revenue decreased as a result of the 5 per cent tariff reduction carried out at the beginning of the financial year. Electricity transmissions in Fingrid's grid increased slightly. Revenue from the sales of balance power decreased on the previous year to 64 (95) million euros. Depreciation costs, reserve power costs and costs of loss energy purchases increased. Moreover, the repair of the subsea cable between Finland and Sweden added to the costs.

The operating profit of the group was 91 (80) million euros, which contains 12 (-18) million euros of positive change in the fair value of electricity derivatives. Fingrid introduced hedge accounting in Group reporting for electricity derivatives as of 1 July 2007. The Group's positive change in the fair value of electricity derivatives totalled 25 million euros, of which 11.7 million euros materialised during the first six months of the year, when the change in the fair value was recorded completely in the income statement. The change in the fair value recognised in the income statement for the third and fourth quarters was 0.4 million euros, and the portion recorded in equity and deferred tax liabilities was 12.6 million euros. Operating profit excluding the change in the fair value of electricity derivatives was 79 (98) million euros.

The Group's profit for the year was 42 (38) million euros.

The return on investment was 7.3 (6.4) per cent and the return on equity 10.3 (10.4) per cent. The equity ratio was 27.5 (25.5) per cent at the end of the review period. Revenue of the parent company was 333 (351) million euros and profit for the financial year 4 (7) million euros.

Financing

The financial position of the Group continued to be good throughout the review period. The net financial costs excluding the change in the fair value of derivatives decreased slightly to 31 (32) million euros. The average interest rate of interest-bearing liabilities, including capital loans, hedging items and changes in fair value, was 4.5 (3.9) per cent. The change in fair value included in the gross financial costs was 3.7 (+3) million euros negative, which raised the average interest rate percentage.

The cash flow from the operations of the Group deducted by capital expenditure and dividends was 13 (31) million euros.

The financial assets at 31 December 2007 totalled 212 (204) million euros. The interest-bearing liabilities, including derivative liabilities, totalled 967 (970) million euros, of which 766 (758) million euros were long-term and 200 (213) million euros were short-term. The counterparty risk involved in the financial derivative contracts was 5 (8) million euros. Available committed long-term loan facilities amounted to 250 (250) million euros.

The company acquired financing from the international and domestic money and capital markets. The company covers the need for short-term funding with the Euro Commercial Paper Programme, and long-term funding has been arranged through the international Debt Issuance Programme. Fingrid Oyj used its early redemption right on 15 May 2007 and redeemed the capital loan of 138 million euros in full. The capital loan had been issued on 1 September 1997.

International rating agency Standard & Poor's Rating Services lowered Fingrid's long-term and short-term credit ratings by one notch in October 2007. Standard & Poor's new long-term rating on Fingrid is A+ and short-term rating is A-1. Fitch Ratings assigned Fingrid Oyj a long-term issuer default rating (IDR) of AA-, a short-term IDR of F1+ and a senior unsecured debt rating of AA. Moody's Investors Service updated Fingrid's credit opinion on 29 January 2008, and kept Fingrid's credit ratings unchanged. Moody's long-term rating on Fingrid is Aa3 and the short-term rating is P-1. All three rating agencies assessed Fingrid's outlook to be stable.

Personnel and rewarding systems

The Fingrid Group and Fingrid Oyj employed 248 persons, including temporary employees, at the end of 2007. The corresponding figure a year before was 242.

Of the personnel employed by the company, 22 per cent (21 per cent in 2006) are women and 78 (79) per cent are men. Among permanent personnel, those in age group 24 - 29 years of age numbered 25 in 2007 (24 in 2006), 30 - 34 years 35 (32), 35 - 39 years 28 (30), 40 - 44 years 40 (32), 45 - 49 years 37 (38), 50 - 54 years 27 (20), 55 - 59 years 30 (39), and age group 60 - 65 years 16 (13).

During 2007, a total of 9,337 (10,449) hours were used for personnel training, with an average of 38 (45) hours per person. Employee absences on account of illness in 2007 accounted for 2 per cent of the total working hours, which was at the same level as in 2006. In addition to a compensation system which is based on the requirements of each position, Fingrid applies quality and incentive bonus schemes.

Board of Directors and corporate management

Fingrid Oyj's Annual General Meeting was held in Helsinki on 22 March 2007. Tapio Kuula, President, was elected as the Chairman of the Board, Arto Lepistö, Industrial Counsellor, as the First Deputy Chairman of the Board, and Timo Rajala, President and CEO, as the Second Deputy Chairman of the Board. The Board members elected were Timo Karttinen, Senior Vice President, Ritva Nirkkonen, Managing Director, Anja Silvennoinen, Vice President, Energy, and Jorma Tammenaho, Portfolio Manager.

Jukka Ruusunen has served as the President & CEO of the company from 1 January 2007.

Risk management

The Board of Directors approves the main measures in risk management as part of the corporate strategy, performance indicators, action plan and budget. The control committee of the Board of Directors obtains an annual report of the foremost risks pertaining to the company's operations and of their management. Moreover, the internal auditor monitors issues such as the internal rules of the company and reports his findings to the control committee.

The foremost business risks of the company are risks relating to the functioning of the power system, risks relating to regulation, risks relating to electrical safety and the environment, price risk of electricity, interest rate risk, and counterparty risk. In its selected strategic focal areas, Fingrid has taken the management of these risks into account.

Fingrid is prepared for a wide-spread disturbance concerning Finland or the Nordic power system by means of various reserves, procedural guidelines, contingency plans, and exercises. In its strategy, the company also focuses on the versatile utilisation of the upgraded power control system, expedited disturbance management, and management of power shortage situations. A wide-spread disturbance in the power system may be caused by several simultaneous faults in the grid, inoperability of Fingrid's power control system, insufficiency of production capacity, or an external event which prevents grid operation entirely or partially.

Fingrid's operations are subject to a licence and supervised by the Energy Market Authority. Changes in Finnish or European regulation may cause negative impacts on the company's financial position or its opportunities to carry out the objectives relating to the development of the electricity market.

The company's strategic focal areas include consolidated Nordic co-operation and its adaptation to the increasingly European electricity market, improved financial control, and constant assessment of financial latitude.

In order to control damage and health risks relating to high-voltage transmission lines and substations, Fingrid is drawing up a risk and vulnerability analysis of the transmission grid and a management plan for the ageing of the grid. There is also specific emphasis on the technical guidelines being up-to-date, and on monitoring the performance of service suppliers.

The price of electricity, changes in the interest rate level, and obligations of parties which have a contractual relationship with Fingrid involve financial risks. The regular monitoring of these risks and hedging against them are improved constantly.

In 2007, internal control audited Fingrid's procedures in risk management. According to the related report, Fingrid has identified risks pertaining to the corporate operations systematically and throughout the organisation, and no significant risks have remained unidentified.

Share capital and capital loans

The minimum share capital of the company is 55,900,000 euros and the maximum share capital is 223,600,000, within which limits the share capital may be increased or lowered without amending the Articles of Association. At present, the share capital is 55,900,000 euros. The shares of the company are divided into series A shares and series B shares.

The number of series A shares is 2,078 and the number of series B shares is 1,247. Shares in the various series have different rights relating to their votes and dividends; these are described in more detail in the notes to the financial statements and in the Articles of Association available on the website of the company.

The company has a capital loan of 30 million euros, which becomes due on 30 November 2029, but, if the company so decides, it can be paid back on 30 November 2009 or 30 November 2019. The capital loan is publicly quoted and registered in the book-entry system of Finnish Central Securities Depository Ltd. The portion of interest, which has not been recorded as an expense, was 0.8 million euros at the end of the financial year.

Environment and corporate social responsibility

Fingrid applies an internal environmental management system. The environmental principles of the company have been described in Fingrid's corporate social responsibility and principles of environmental management. The primary environmental impacts of Fingrid's operations are caused by transmission lines together with areas required by these plus substations serving as nodes in the transmission grid.

Fingrid has approx. 30,300 tonnes of creosote-impregnated or CCA-impregnated wooden towers and cable trench covers, categorised as hazardous waste. The related disposal costs of approx. 2 million euros have been entered in the financial statements under provisions for liabilities and charges, which in turn have been added correspondingly to property, plant and equipment.

Equipment used in Fingrid's substations contains approx. 22 tonnes of sulphur hexafluoride (SF₆ gas), which is categorised as a greenhouse gas. However, no provision has been made for the disposal cost of this gas because it can be re-used after cleaning.

Fingrid serves as the issuing body for guarantees of origin of electricity in Finland. The guarantee is included in the system required by the RES-E directive of the European Union.

Events after the closing of the financial year and estimate of future outlook

There have been no material events or changes in Fingrid's business or financial situation after the closing of the financial year. The financial result for the current year is expected to decrease somewhat on the previous year as a result of increased expenses. The grid tariff was raised by 4.5 per cent at the beginning of 2008.

The company will continue the implementation of its extensive capital expenditure programme. The capital expenditure will grow from an annual level of approx. 40 million euros to more than 100 million euros per year in the coming years. The capital expenditure will grow because electricity consumption is increasing, the ageing transmission grid needs to be renewed, and cross-border transmission capacity between countries needs to be further enhanced in order to promote the market mechanisms. Moreover, Fingrid has to increase its own reserve power capacity.

Fingrid Oyj has lodged an appeal with the Market Court against a decision issued by the Energy Market Authority concerning the proceeds of grid operation and fees levied on the transmission service. Fingrid argues that when assessing a reasonable return, the supervision model applied by the Energy Market Authority needs to take into account the special characteristics of Fingrid's operations, the new obligations of domestic and EU-level regulation affecting its position, and risks. These should be considered by applying a specific additional risk premium. The other items in the appeal are related to the handling of financial assets and receivables as well as specification of efficiency and cost incentives.

THE BOARD OF DIRECTORS' PROPOSAL FOR THE DISTRIBUTION OF PROFIT

Fingrid Oyj's distributable funds in the financial statements are 10,166,264.95 euros. After the closing of the financial year, there have not been essential changes in the financial position of the company, nor does the proposed dividend distribution threaten the solvency of the company according to the Board of Directors.

The company's Board of Directors will propose to the Annual General Meeting of Shareholders that

- 2,156.17 euros of dividend per share be paid in accordance with article 5 of the Articles of Association, totalling 7,169,262.65 euros
- 2,997,002.30 euros be carried over as unrestricted equity.

NOTES TO THE CONSOLIDATED FINANCIAL STATEMENTS

1. ACCOUNTING PRINCIPLES OF CONSOLIDATED FINANCIAL STATEMENTS

Fingrid Oyj is a Finnish public limited company established in accordance with Finnish law. Fingrid's consolidated financial statements have been drawn up in accordance with the International Financial Reporting Standards (IFRS) as adopted by the EU. Fingrid's registered office is in Helsinki at address P.O. Box 530 (Arkadiankatu 23 B), 00101 Helsinki.

A copy of the consolidated financial statements is available on the internet at www.fingrid.fi or at Fingrid Oyj's head office.

The amounts in the financial statements are in thousands of euros and based on the original acquisition costs unless otherwise stated in the accounting principles or notes.

Fingrid Oyj's Board of Directors has accepted the publication of these financial statements in its meeting of 13 February 2008. In accordance with the Finnish Companies Act, the shareholders have an opportunity to adopt or reject the financial statements in the shareholders' meeting held after their publication. The shareholders' meeting can also amend the financial statements.

Primary business areas

Fingrid Oyj is the national transmission system operator responsible for the main electricity transmission grid in Finland. The companies responsibilities are develop the main grid, maintain a continuous balance between electricity consumption and generation, settle the electricity deliveries between the parties on a nation-wide level, and promote the electricity market. The company is also in charge of the cross-border transmission connections to the other Nordic countries and Russia.

The consolidated financial statements contain the parent company Fingrid Oyj and its fully-owned subsidiary Fingrid Verkko Oy. The consolidated associated companies were Porvoon Alueverkko Oy (ownership 33.3%) and Nord Pool Spot AS (ownership 20%). The Group has no joint ventures.

All intercompany transactions, internal margins on inventories and property, plant and equipment, internal receivables and liabilities as well as internal profit distribution are eliminated in consolidation. Ownership of shares between the Group companies is accounted for under the purchase method of accounting. The associated companies are consolidated using the equity method of accounting. The portion of the results of associated companies for the financial year, based on the Group's ownership in them, is included in the income statement in finance income and costs.

Use of estimates

When the consolidated financial statements are drawn up in accordance with IFRS, the company management need to make estimates and assumptions which have an impact on the amounts of assets, liabilities, income and expenses recorded and conditional items presented. These estimates and assumptions are based on historical experience and other justified assumptions which are believed to be reasonable in the conditions which constitute the foundation for the estimates of the items recorded in the financial statements. The actual amounts may differ from these estimates but the estimates do not involve significant risks.

Segment reporting

The entire business of the Fingrid Group is deemed to comprise transmission system operation in Finland with system responsibility, only constituting a single segment. There are no essential differences in the risks and profitability of individual products and services. This is why segment reporting in accordance with the IAS 14 standard is not presented.

Revenue and sales recognition

Sales recognition takes place on the basis of the supply of the service. Electricity transmission is recognised once the transmission has taken place. Balance power services are recognised on the basis of the supply of the service. Connection fees are recognised on the basis of the relevant time. Indirect taxes and discounts, among others, are deducted from the sales income when calculating revenue.

Contributions

Contributions received from the EU or other parties are recognised in the income statement at the same time as the related expenses. Contributions received are presented in other operating income.

Pension schemes

The pension security of the Group's personnel is arranged by outside pension insurance companies. The Group has both contribution-based pension schemes in accordance with IAS 19 and benefit-based schemes. Pension premiums paid for contribution-based schemes are charged to the income statement in the year to which they relate. Costs resulting from benefit-based schemes are recorded in the income statement on the basis of annual actuarial calculations.

Research and development

Research and development by the Group aim to intensify intra-company operations. No new services or products sold separately are created as a result of R&D. This is why R&D costs are recorded in the income statement as expenses in the accounting year in which they are created.

Leases

In accordance with the principles of standard IAS 17 Leases, those leases where the company is transferred substantially all the risks and rewards incident to ownership are categorised as finance leases. Assets leased through finance leases reduced by accumulated depreciation are recorded in property, plant and equipment, and the resulting liabilities are recorded in interest-bearing liabilities. When a Group company is the lessor, the present value of future lease payments are recorded in interest-bearing receivables, and the assets leased out are depreciated in the property, plant and equipment of the lessor. Lease payments resulting from finance leases are broken down into a finance cost or income and into a reduction in liability or receivable.

Finance leases in accordance with standard IAS 17 are recognised in the balance sheet and valued at the lower of an amount equal to the fair value of the assets when the lease begins or the present value of minimum lease rents. Assets acquired through finance leases are depreciated according to plan, and potential impairment losses are recognised. Depreciation is calculated in accordance with the lower of the Group's depreciation periods for property, plant and equipment or the lease period.

Lease obligations where the risks and rewards incident to ownership remain with the lessor are recorded as other leases. Lease obligations paid on the basis of other leases are recorded in other operating expenses, and they are recognised in the income statement as equally large items during the lease period.

Foreign currency transactions

The consolidated financial statements are presented in euros, which is the currency used by the parent company. Commercial flows and financial items denominated in foreign currencies are booked at the foreign exchange mid-rate quoted by the European Central Bank (ECB) at the transaction value date. Receivables and liabilities denominated in foreign currencies are translated at the mid-rate quoted by ECB at the closing day and recognised in the financial statements. Foreign exchange gains and losses from business are included in corresponding items above operating profit. Foreign exchange gains and losses from financial instruments are recorded at net amounts in finance income and costs.

Foreign exchange gains and losses from translating the income statement items of the foreign associated company to the mid-rate and from translating its balance sheet items to the rate at the closing date are presented as a separate item in shareholders' equity. Translation differences created before 1 January 2004 are recorded in retained earnings in accordance with the exception allowed by the IFRS 1 standard.

Income taxes

Taxes presented in the consolidated income statement include the Group companies' accrual taxes for the profit of the financial year, tax adjustments from previous financial years and changes in deferred taxes. In accordance with IAS 12, the Group records deferred tax assets as non-current receivables and deferred tax liabilities as non-current liabilities.

Deferred tax assets and liabilities are recorded of all temporary differences between the tax values of asset and liability items and their carrying amounts using the liability method. Deferred tax is recorded using tax rates valid at the closing date.

The largest temporary differences result from the depreciation of property, plant and equipment and from financial instruments. No deferred tax is recorded of the undistributed profits of the foreign associated company, because receiving the dividend does not cause a tax impact by virtue of a Nordic tax agreement (and the difference will not likely be realised in the foreseeable future). The deferred tax asset from temporary differences is recorded up to an amount which can likely be utilised against taxable income created in the future.

Earnings per share

The Group has calculated the diluted earnings per share in accordance with standard IAS 33. The diluted earnings per share are calculated using the weighted average number of shares outstanding during the financial year.

Since Fingrid has no option systems or benefits bound to the shareholders' equity nor other equity financial instruments, there is no dilution effect.

Goodwill and other intangible assets

Goodwill created as a result of the acquisition of enterprises and businesses is composed of the excess of the acquisition cost over the identifiable net assets of the acquired business valued at fair value. Goodwill is allocated to cash-generating units and it is tested annually for impairment. With associated companies, goodwill is included in the value of the investment in the associated company.

The Group has applied the exception allowed by the IFRS 1 transition standard to business combinations which took place before 1 January 2004, which is why the goodwill resulting from the acquisition of associated companies and businesses was transferred at values in accordance with FAS. Goodwill has not been depreciated after 1 January 2004.

Other intangible assets comprise computer systems and land use rights. Computer systems are valued at the original acquisition cost and depreciated on a straight line basis during their estimated economic lives. Land use rights with unlimited economic lives are not depreciated but tested annually for impairment.

The depreciation periods of intangible assets are as follows:

Computer systems, operation control	7-15 years
Computer systems, others	3 years

Subsequent expenses relating to intangible assets are only capitalised if their financial benefit for the company increases above the former performance level. In other cases, the expenses are recorded in the income statement when they materialise.

Emission rights

Emission rights acquired free of charge are valued in intangible assets at their market price at the time of acquisition, and purchased emission rights are recorded at the acquisition cost. If it is estimated that the acquired emission rights do not suffice during the first emission rights period, the company must purchase the excess portion from the emission rights market. No depreciation is recorded of emission rights. They are derecognised in the balance sheet at the time of transfer when the actual emissions have been ascertained.

A provision is recorded of emission rights to be returned. If the Group has a sufficient volume of emission rights to cover the return obligations, the provision is recognised at the carrying amount corresponding to the emission rights in question. If there are not sufficient emission rights to cover the return obligations, the provision is recognised at the market price of the emission rights in question.

Property, plant and equipment

Land areas, buildings, transmission lines, machinery and equipment constitute most of the property, plant and equipment. These are recognised in the balance sheet at the original acquisition cost less accumulated depreciation and potential impairment. Interest expenses during the construction period are not capitalised. If an asset is made up of several parts with economic lives of different lengths, the parts are recorded as separate items.

When a separately recorded part of property, plant and equipment is renewed, the costs relating to the new part are capitalised. Other subsequent costs are capitalised only if it is likely that the future financial benefit relating to the asset benefits the Group and the acquisition cost of the asset can be determined reliably. Repair and maintenance costs are recognised in the income statement once they have materialised.

Straight-line depreciation is recorded of property, plant and equipment on the basis of their economic lives. Depreciation on property, plant and equipment taken into use during the financial year is calculated asset-specifically from the month of introduction. Land and water areas are not depreciated. The expected economic lives are verified at each closing date, and if they differ significantly from the earlier estimates, the depreciation periods are amended accordingly.

The depreciation periods of property, plant and equipment are as follows:

Buildings and structures	
Substation buildings and separate buildings	40 years
Substation structures	30 years
Buildings and structures at gas turbine power plants	20 years
Separate structures	15 years
Transmission lines	
Transmission lines 400 kV	40 years
Direct current lines	40 years
Transmission lines 110-220 kV	30 years
Creosote-impregnated towers and related disposal expenses	30 years
Aluminium towers of transmission lines (400 kV)	10 years
Optical ground wires	10-20 years
Machinery and equipment	
Substation machinery	10-30 years
Gas turbine power plants	20 years
Other machinery and equipment	3-5 years

Gains or losses from the sale or disposition of property, plant and equipment are recorded in the income statement under either other operating income or expenses. Property, plant and equipment are derecognised in the balance sheet when the planned depreciation period has expired, the asset has been sold, scrapped or otherwise disposed of to an outsider.

Impairment

The carrying amounts of asset items are assessed at the closing date to detect potential impairment. If impairment is detected, the recoverable amount of the asset is estimated. An asset is impaired if the balance sheet value of the asset or of a cash-generating unit exceeds the recoverable amount. Impairment losses are recorded in the income statement.

The impairment loss of a cash-generating unit is first allocated to reduce the goodwill of the cash-generating unit and thereafter to reduce in proportion the other asset items of the unit.

The recoverable amount of intangible assets and property, plant and equipment is defined so that it is the higher of the fair value reduced by the costs resulting from sale or the value in use. When defining the value in use, the estimated future cash flows are discounted at their present value based on discount rates which reflect the average capital cost of the said cash-generating unit before taxes. The specific risk of the assets in question is also considered in the discount rates. An impairment loss relating to property, plant and equipment and intangible assets other than goodwill is reversed if a change has taken place in the estimates used for defining the recoverable amount of the asset. An impairment loss is reversed at the most up to an amount which would have been defined as the carrying amount of the asset (reduced by depreciation) if no impairment loss had been recorded of it in the previous years. An impairment loss recorded of goodwill is not reversed.

Available-for-sale investments

Publicly quoted securities are classified as available-for-sale investments and recorded at fair value, which is the market value at the closing date. Changes in fair value are recorded in the shareholders' equity until the investment is sold or otherwise disposed of, in which case the changes in fair value are recorded in the income statement. Permanent impairment of assets is recorded in the income statement. Unlisted securities are recorded at the acquisition cost as their fair values are not reliably available.

Inventories

Inventories are entered at the lower of the acquisition cost or net realisable value. The acquisition cost is determined using the FIFO principle. The net realisable value is the estimated market price in normal business reduced by the estimated future costs of completing and estimated costs required by sale.

Trade receivables and other receivables

Trade receivables and other receivables are recorded at the original value. The amount of bad receivables is estimated based on the risks of individual items. An impairment loss of receivables is recorded when there is valid evidence that the Group will not receive all of its receivables at the original terms (e.g. due to the debtor's serious financial problems, likelihood that the debtor will go bankrupt or subject to other financial rearrangements, and negligence of due dates of payments by more than 30 days). Impairment losses are recorded directly to reduce the carrying amount of receivables.

Electricity derivatives

The company enters into electricity derivative contracts in order to hedge its electricity purchases in accordance with the loss energy forecast. Electricity derivatives are classified as held-for-trading derivative assets and liabilities. On 1 July 2007, the company adopted hedge accounting for electricity derivatives in accordance with the IAS 39 standard, based on cash flow hedging of loss energy purchases. The company documents at the inception of the contract the relationship between the hedged item and the hedging instrument, in accordance with the loss energy purchasing principles approved by the Board of Directors. The effectiveness calculation of hedging is documented both at the hedge inception and on an ongoing basis. Hedge accounting is applied to publicly quoted annual and quarterly instruments bought by the company. Changes in the fair values of instruments which are designated and qualify for hedge accounting are recorded in equity, in the hedge reserve. Changes in the fair values of other electricity derivatives continue to be recorded in the income statement. Instruments quoted at Nord Pool ASA are valued at the market prices at the closing date. Bilateral price hedging contracts are valued using the price of a comparable instrument at Nord Pool ASA.

Interest rate and foreign exchange derivatives

The company enters into derivative contracts in order to hedge the financial risks (interest rate and foreign exchange exposures) in accordance with the primary principles for financing approved by the Board of Directors. Fingrid does not apply hedge accounting to the derivatives. Financial derivatives are classified as held-for-trading derivative assets and liabilities. Derivative assets and liabilities are recognised at the original acquisition cost. Derivatives are measured at fair value at the closing date, and their change in fair value is recorded in the income statement in finance income and costs. The fair values of derivatives at the closing date are based on different calculation methods. Foreign exchange forwards have been measured at the forward prices. Interest rate and cross-currency swaps have been measured at the present value on the basis of the yield curve of each currency. Interest rate options have been valued by using generally accepted option pricing models in the market.

Financial securities and cash and cash equivalents

Financial securities are classified as held-for-trading assets. This group includes money market securities and investments in short-term money market funds. Financial securities are recorded in the balance sheet at fair value at the settlement day. Financial securities are measured in the financial statements at fair value, and their change in fair value is recognised in the income statement in finance income and costs.

Financial assets recognised in the income statement at fair value primarily comprise certificates of deposit, commercial papers and municipality bills with maturities of 3 - 6 months, and investments in short-term money market funds.

Cash and cash equivalents comprise bank balances and bank deposits. Bank deposits are classified as held-to-maturity assets and they are recognised at the original acquisition cost. In the financial statements, bank deposits are measured at the amortised acquisition cost.

Financial securities and other cash equivalents are derecognised when they mature, are sold or otherwise disposed of.

Interest-bearing liabilities

Interest-bearing liabilities include bond and commercial paper issuance and loans raised by the company, recorded at the acquisition cost less transaction costs. Transaction costs consist of bond prices above or below par value, credit fees, commissions and administrative fees. In the financial statements, interest-bearing liabilities are measured at the amortised cost using the effective interest rate method. Interest-bearing liabilities are derecognised when they mature and are repaid.

Provisions

A provision is recorded when the Group has a legal or factual obligation based on an earlier event and it is likely that fulfilling the obligation will require a payment, and the amount of the obligation can be estimated reliably.

The provisions can relate to the rearrangement of operations, unprofitable contracts, environmental obligations, litigation, and tax risks. The provisions are valued at the present value of costs required to cover the obligation. The discounting factor used in calculating the present value is chosen so that it reflects the market view of the time value of money at the assessment date and of the risks pertaining to the obligation.

Dividend distribution

The Board of Directors' proposal concerning dividend distribution is not recorded in the financial statements. This is only recorded after a decision made by an Annual General Meeting of Shareholders.

New IFRS standards and interpretations

The Group has not adopted the following published IFRS/IAS standards and interpretations, compliance to which is not yet mandatory: IAS 1 Presentation of Financial Statements: A Revised Presentation, IFRS 8 Operating Segments, IFRIC 8 Scope of IFRS 2, IFRIC 11-IFRS 2 Group and Treasury Share Transactions, IFRIC 12 Service Concession Arrangements, IFRIC 13 Customer Loyalty Programmes, IFRIC 14 IAS 19 The Limit on a Defined Benefit Asset, Minimum Funding Requirements and their Interaction. The assessment is that these changes will not have any material impact on the Group's profit or balance sheet position.

2. INFORMATION ON REVENUE AND SEGMENTS

Through the grid services, a customer obtains the right to transmit electricity to and from the main grid through its connection point. Grid service is agreed by means of a grid service contract signed between a customer connected to the main grid and Fingrid. Fingrid charges a consumption fee, use of grid fee, connection point fee and market border fee for the grid service. The contract terms are equal and public.

Transmission services on the cross-border connections to the other Nordic countries enable participation in the Nordic Elspot and Elbas exchange trade. Fingrid makes transmission services on the cross-border connections from Russia available to all electricity market parties. The transmission service is intended for fixed electricity imports. When making an agreement on transmission services from Russia, the customer reserves a transmission right (in MW) for a period of time to be agreed upon separately. The smallest unit that can be reserved is 50 MW. The contract terms are equal and public.

Information on segments is not presented, because the entire business of the Fingrid Group is deemed to comprise transmission system operation in Finland with system responsibility, only constituting a single segment. There are no essential differences in the risks and profitability of individual products and services.

3. OTHER OPERATING INCOME, 1,000 €	2007	2006

Undiluted earnings per share, €	12,616	11,531
Diluted earnings per share, €	12,616	11,531

11. DIVIDEND PER SHARE

After the closing date, the Board of Directors have proposed that a dividend of 2,156.17 (2006: 2,082.71) euros per share be distributed, totalling 7.2 (2006: 6.9) million euros.

12. GOODWILL, 1,000 €	2007	2006
Cost at 1 Jan	87,920	87,920
Cost at 31 Dec	87,920	87,920
Carrying amount 31 Dec	87,920	87,920

The entire business of the Fingrid Group comprises transmission system operation in Finland with system responsibility, which the full goodwill of the Group concerns.

In impairment testing, the recoverable amount from business is defined by means of value in use. The cash flow forecasts used in impairment calculations are based on financial plans approved by executive management, covering a period of 6 years. The expected cash flows during the subsequent years are estimated by extrapolating the expected cash flows using a growth estimate of zero per cent. The discount rate before taxes used in the calculations is 6.9%.

According to the view of the management, reasonable changes in the primary assumptions used in the calculations will not lead to a need for recording impairment losses.

13. INTANGIBLE ASSETS, 1,000 €	2007	2006

21. EQUITY

Equity is composed of the share capital, share premium account, fair value reserve (incl. hedge and revaluation reserves), translation reserve, and retained earnings. The hedge reserve includes the changes in the fair value of hedging instruments for loss energy. The fair value reserve includes the changes in the fair value of available-for-sale investments. The translation reserve includes translation differences in the net capital investments of associated companies in accordance with the purchase method of accounting. The profit for the financial year is recorded in retained earnings.

Share capital and share premium account, 1,000 €	Share capital	Share premium account	Total
1 Jan 2006	55,922	55,922	111,845
Change			
31 Dec 2006	55,922	55,922	111,845
Change			
31 Dec 2007	55,922	55,922	111,845

The share capital is broken down as follows:	Number of shares qty	Of all shares %	Of votes %
Series A shares	2,078	62.49	83.32
Series B shares	1,247	37.51	16.68
Total	3,325	100.00	100.00

Number of shares, qty	Series A shares	Series B shares	Total
1 Jan 2007	2,078	1,247	3,325
Change			
31 Dec 2007	2,078	1,247	3,325

The maximum number of shares is 13,000 as in 2006. The shares have no par value.

Series A shares confer three votes each at a shareholders' meeting and series B shares one vote each. When electing members of the Board of Directors, series A share confers 10 votes each at a shareholders' meeting and each series B share one vote each.

Series B shares have preferential right over series A shares to obtain the annual dividends specified below from the funds available for profit distribution. After this, a corresponding dividend is distributed to series A shares. If the annual dividend cannot be distributed in some year, the shares confer a right to receive the undistributed amount from the funds available for profit distribution in the subsequent years; however so that series B shares have preferential right over series A shares to receive the annual dividend and the undistributed amount.

A shareholders' meeting decides on the annual dividend for series B shares on the following grounds:

The amount of the annual dividend is calculated on the basis of calendar years so that the subscription price of a share, added by amounts paid in conjunction with potential increases of share capital and reduced by potential amounts paid in refunds of equity, is multiplied by the dividend percentage; however so that the minimum dividend is 6%. The dividend percentage is defined on the basis of the yield of the 30-year German Government Bond.

Series B shares have preference with respect to dividends as stipulated in the Articles of Association. The dividend for 2007 is 6.41 % p.a. of the subscription price of the share.

There are no minority interests.

Share premium account

The share premium account includes the difference between the counter value of the shares and the value obtained. According to the Finnish Companies Act the premium fund means tied equity. The share capital can be increased by transferring funds from the premium fund account. The premium fund account can be decreased in order to cover losses or it can under certain conditions be returned to the owners.

Fair value reserve

The fair value reserves include the changes in the fair value of derivative instruments used for hedging cash flow (hedge reserve) and the changes in the fair value of available-for-sale investments (publicly quoted and unquoted securities) (revaluation reserve).

Hedge reserve, 1,000 €	2007	2006

Deferred taxes 31 Dec	107,975	91,426

23. PENSION COMMITMENTS

The most important pension scheme of the Group is a contribution-based scheme in accordance with TyEL (Finnish Employee Pensions Act), where the benefits are determined directly on the basis of the beneficiary's earnings.

The Group has a benefit-based supplementary pension scheme covering those born between 1945 and 1949 who have worked at Fingrid at least as of 1 September 1997. These persons can retire at certain discretionary conditions at the earliest at an age of 60 and at the earliest in 2006. The payment of the supplementary pension will finish when the person reaches old age pension and at the latest at the age of 63, after which the person's pension will be composed of the statutory pensions incurred by that time.

Benefit-based pension expense in income statement, 1,000 €	2007	2006
Expenses based on service during financial year	323	533
Expected return on scheme assets	-105	-99
Interest expenses	117	118
Total	335	552

Benefit-based pension liability in balance sheet, 1,000 €	2007	2006
Present value of funded obligations	1,543	2,144

Total	972,862	966,616	986,052	970,359

*The fair value of capital loan has been presented assuming that they are redeemed on the first possible repurchase date.

The fair values of interest-bearing liabilities are based on the present values of cash flows. Loans raised in various currencies are measured at the present value on the basis of the yield curve of each currency. The discount rate includes the company-specific and loan-specific risk premium. Liabilities denominated in foreign currencies are translated into euros at the mid-rate quoted by ECB at the closing day.

Capital loan included in interest-bearing liabilities, 1,000 €				2007	2006
		Maturity date	Interest		
EUR	137,914	15.05.2027	6.80%*		137,914
EUR	30,000	30.11.2029	6.388%**	30,000	30,000
Total				30,000	167,914

* According to the loan agreement, the company decided to redeem early on 15 May 2007 the principal and accrued interest at par.

**The loan becomes due on 30 November 2029, but, if the company so decides, it can be paid back on 30 November 2009 or 30 November 2019 at 100% rate. The coupon rate is 6.388% p.a. until 30 November 2009, after which the interest rate is the 6 month Euribor + 2.28% p.a. until 30 November 2019. After this, the coupon rate is the 6 month Euribor + 3.28% p.a.

Capital loan (30 million euros) is excluded from the table above, because the repayment schedule is conditional.

Capital structure

The corporate finances are planned over a long time span, and the company is ensured sufficient latitude and independent power of decision in the management of finances. The company aims to secure sufficient cash flow for the long-term development of transmission capacity, secured operational reliability and development of the electricity market so that the tariff level remains moderate. The company pursues as low average capital costs as possible by utilising a lower cost through debt financing as compared to equity cost. However, the goal is to keep the cash flow and debt service ratios of the company at such a level that the company retains its high credit rating. The high credit rating enables the company to tap the international and domestic money and capital markets.

Provisions 1 Jan	2,067	2,067
Provisions used	-60	
Provisions 31 Dec	2,007	2,067

Fingrid uses creosote-impregnated or CCA-impregnated wooden towers and cable trench covers. Decree YMA 711/2001 by the Finnish Ministry of the Environment categorises decommissioned impregnated wood as hazardous waste. A provision was recorded in 2004 of the related disposal costs materialising in the future decades.

The fair values of financial derivatives are included in the balance sheet in non-current and current interest-bearing liabilities, interest and other financial liabilities, and noncurrent and current financial and other receivables.

Interest rate options included in financial derivatives are interest rate cap contracts with identical structures. The reference rate of the contract is the 6 month Euribor, and at the effective date a contract includes 6 or 8 caplets. The option premium has been paid in full to the counterparty at the contract date.

Electricity forward contracts, others, includes bilateral financial and physical purchase commitments concerning electricity purchases, not cleared separately by a clearing organisation. The derivatives hedge future electricity losses.

The net fair value of derivatives indicates the realised profit/loss if they had been reversed on the last business day of 2007.

The foremost lease agreements of the Group relate to office premises. The durations of lease agreements range from less than one year to ten years, and the contracts can usually be extended after the original date of expiration. The index, renewal and other terms of the different agreements vary.

The Group has rented for instance several land areas and some 110 kilovolt transmission lines and circuit breaker bays.

31. LEGAL PROCEEDINGS AND PROCEEDINGS BY AUTHORITIES

There are no ongoing legal proceedings or proceedings by authorities that would have a material impact on the business of the company. In relation to transmission line projects there are several complaints made to different instances of justice. According to the management of the company there are no ongoing legal proceedings or other such legal proceedings relating to other areas, which final outcome would have a material impact on the financial position of the Group. In January 2008 Fingrid Oyj appealed to the market court relating to the decision 13 December 2007 by the Energy Market Authority "Determination of the methodology for the assessment of the return of the grid owners grid operations transmission services pricing for the review period starting 1 January 2008 ending 31 December 2011".

32. RISK MANAGEMENT

The objective of Fingrid's risk management is to make preparations for cost-effective measures providing protection against damage and loss relating to risks and to make the entire personnel committed to considering the risks pertaining to the company, its various organisational units and each employee. In order to fulfil these objectives, risk management must be continuous and systematic. The significance of individual risks or risk entities is assessed against the present level of protection, taking into account the probability of a disadvantageous event, its financial impact and impact on corporate image or on the attainment of the business goals. The Board of Directors approves the primary principles for risk management and any amendments to them. The Board of Directors approves the primary action for risk management as part of the corporate strategy, indicators, operating plan, and budget. The control committee of the Board of Directors receives a situation report of the major risks relating to the operations of the company and of the management of such risks.

FINANCIAL RISK MANAGEMENT

Fingrid Oyj is exposed to market, liquidity and credit risks when managing the financial position of the company. The company's objective is to reduce risks such that the fluctuations of Fingrid's cash flow remains low.

Primary principles for financing

The Board of Directors of Fingrid Oyj approves the primary principles for financing, stating the guidelines for external funding, financial asset management, market, liquidity, refinancing and credit risks.

Risk management execution and reporting

The treasury is responsible for executing the external funding, the financial asset management and manages the market risks which the company is exposed to. The financial activities of the company are reported four times a year to the Board of Directors. The treasury is responsible for identifying, measuring and reporting the financial risks, which the company may be exposed to.

Risk management processes

The treasury is in charge of risk management monitoring, systems and models as well as methods, for risk calculation and assessment.

Market risks

Fingrid Oyj uses derivative agreements in order to hedge market risks such as foreign exchange, interest rate risk and commodity risks. Derivatives are only used for hedging purposes, and therefore the company does not enter into any deals for market speculation. The hedging instruments are defined in the primary principles for financing or in the loss power procurement policy, and chosen in order to achieve efficient hedging of a risk exposure.

Foreign exchange risk

The functional currency of the company is the euro. The basic rule of the company is to protect foreign exchange risks, but can according to the primary principals for financing, leave an exposure unhedged, which may not exceed 10 % of the financial assets.

Transaction exposure

The company issues securities in the domestic and international money and capital markets. The interest bearing debt portfolio of the company is distributed between different convertible currencies and the total debt portfolio and the related interest rate flows are hedged against currency risk.

The foreign exchange risk of each bond is done in conjunction with the underlying debt issuance. Business related currency risks are small, and they are hedged. Therefore is there no sensitivity analysis presentation. During the financial year the company used foreign exchange forwards and cross currency swaps for hedging the transaction exposure.

The tables below first illustrate currency distribution and the hedging rate of the interest bearing debt of the company and then the sensitivity analysis of the euro against the foreign currencies, which also proves that the company does not have any open foreign exchange risk.

Currency distribution and hedging degree of interest-bearing liabilities, 1,000 €

Currency distribution 31 Dec 2007	Carrying amount	Portion %	Hedging degree	Currency distribution 31 Dec 2006	Carrying amount	Portion %	Hedging degree
EUR	465,358	51		EUR	507,579	55	
CHF	47,138	5	100	CHF	58,498	6	100
CZK	28,166	3	100	CZK	27,288	3	100
GBP				GBP	14,892	2	100
JPY	109,137	12	100	JPY	114,701	12	100
NOK	50,264	5	100	NOK			
SEK	125,427	14	100	SEK	62,154	7	100
USD	90,618	10	100	USD	138,932	15	100
Total	916,108	100	100	Total	924,043	100	100

The sensitivity analysis of foreign exchange rate is measured as a 10 % between the euro and the one currency in question. The company's result will not be subject to exchange rate differentials, since the debt denominated in foreign currencies are hedged against foreign exchange changes.

Translation exposure

The company holds an equity investment in an associated company denominated in a foreign currency. This translation risk is unhedged. The sensitivity analysis is (10 % changes) is presented in the following table. The table shows a 10 % change of the Norwegian krone and the impact of the change on the company's equity.

Translation exposure, 1,000 €

		2007	2006
		Equity	Equity
		31 Dec 2007	31 Dec 2006
NOK	+10 %	410	313
	-10 %	-336	-256

Interest rate risk

The company is only exposed to interest rate risk in euros, because the interest bearing debt are both in terms of principal and interest payments hedged against exchange rate risk, and the financial assets are denominated in euros. The interest-bearing liabilities are mainly linked to floating rates.

Interest rate risk is managed in accordance with the main principles of financing so that 30 - 70 % of the interest costs are hedged over the next five years. When the interest rates are high, the hedging level is kept close to the lower limit of the range, and when the interest rates are low, the hedging level is kept close to the upper limit of the range. The specified low level of interest rates is 3 % or less, and high level of interest rates is 5 % or more. At the end of 2007, 42 % of the interest costs for the next five years were hedged, and correspondingly 57 % were hedged at the end of 2006.

The sensitivity of the interest rate risk is measured as a 1 percentage unit interest rate fluctuation and by using the CfaR method (Cashflow at Risk). The assumed fluctuation in interest rates is the effect of a 1 percentage unit fluctuation during the next 12 months from the closing date. The analysis of interest rate sensitivity is carried out on interest-bearing liabilities including exchange rate hedging, the derivatives portfolio hedging the interest rate exposure, and on cash and cash equivalents, which result in a net liability position exposed to interest rate fluctuations.

Interest rate sensitivity, 1,000 €	2007		2006	
	-1%-unit	+1%-unit	-1%-unit	+1%-unit
Interest-bearing liabilities	7,027	-7,027	6,638	-6,638
Interest rate derivatives	1,123	2,098	400	2,554
Interest-bearing liabilities total	8,150	-4,929	7,038	-4,084
Cash and cash equivalents	-1,763	1,763	-1,519	1,519
Interest-bearing net liabilities total	6,387	-3,166	5,519	-2,565

The following table presents how the CfaR method is used for measuring the impact of the interest-bearing liabilities, derivatives, and cash and cash equivalents have, with a given confidence level and over time horizon of 12 months, on the cash flow of the company. The other finance costs of the company are not included in the calculation.

Cashflow at Risk, 1,000 €	2007		2006		
	31 Dec 2007		31 Dec 2006		
Confidence level	Net finance costs		Confidence level	Net finance costs	
96 %	min.	31,463	96 %	min.	32,432
	max.	33,590		max.	34,095
98 %	min.	31,282	98 %	min.	32,177
	max.	33,718		max.	34,190

Commodity risk

The company is exposed to price and volume risk through transmission losses. Loss energy purchases are hedged in accordance with the loss energy purchasing principles accepted by the Board of Directors. The time span of price hedging is five years, divided into three parts: basic, budgetary and operative hedging. Moreover, the company has operative instructions for physical electricity purchases, instructions for price hedging and control room instructions. For hedging of loss energy purchases, the company uses Nord Pool ASA's electricity derivative contracts and bilateral contracts.

If the market prices of electricity derivatives had been 20 % higher or lower on the closing date, the change in the fair value of electricity derivatives would have been 34.7 million euros higher or lower (24.1 million euros in 2006). The impact on the company's equity would have been 25.7 (17.8) million euros. The impact on the equity is presented as the total impact on equity, without separating the impact of hedge accounting, which was implemented during the financial year.

Liquidity risk and refinancing risk

Fingrid is exposed to liquidity and refinancing risk deriving from redemption of loans, payments and fluctuations in cash flow from operating activities.

The liquidity of the company must be arranged so that 100% of the refinancing need for the next 12 months is covered by means of liquid assets and available long-term committed credit lines; however, so that the refinancing need may not account for more than 45 % of the total amount of the company's debt financing. As back-up for the liquidity the company has a revolving credit facility of 250 million euros. The revolving credit facility will mature on 16 November 2012. The revolving credit facility has not been drawn.

The company's funding is carried out through debt issuance programmes. The company operates in the international capital market by issuing bonds under the Medium Term Note Programme: The Programme size is one billion euros. Short-term funding is arranged through commercial paper programmes; a Euro Commercial Paper Programme of 600 million euros and a domestic commercial paper programme of 150 million euros. The refinancing risk reduced by an even maturity profile so that the refinancing need over periods of 12 months in excess of one year must not exceed 30 % of the company's amount of debt financing. Contactual repayments and interest costs of interest-bearing financial liabilities are presented in the next table. The interest rate percentages of variable-interest loans are defined using the zero coupon curve. The repayments and interest amounts are un-discounted values. Finance costs relating to cross-currency swaps, interest rate swaps and forward contracts are often paid in net amounts depending on their nature. In the following table, they are presented in gross amounts.

Credit risk

Credit risk arises from a counterparty not fulfilling its contractual commitments towards Fingrid. Such risks arise in the company's operations and financial activities.

Credit risk in operations

The company measures and monitors its counterparty risks as part of business monitoring and reporting. The credit rating and payment behaviour of all counterparties and suppliers are regularly monitored. The company has no significant credit risk concentrations. The company did not incur credit losses or rearrange the terms of trade receivables during the financial year.

Credit risk in financing

The company is exposed to credit risk through derivative agreements and financial investments. The company only has derivatives outstanding and invests its funds within the permitted risk limits. There is an upper limit in euros for each counterparty. The company signs the International Swap Dealers Association's (ISDA) Master Agreement with each counterparty before entering into a derivative transaction. The counterparty risks of financial instruments did not incur any losses during the financial year.

33. RELATED PARTY TRANSACTIONS

Fingrid Group's related parties comprise associated companies Porvoon Alueverkko Oy and Nord Pool Spot AS, the biggest owners Fortum Power and Heat Oy and Pohjolan Voima Oy with their group companies, and top management with its related parties. Top management is composed of the Board of Directors, President, and management team.

The company has not lent money to the top management, and the company has no transactions with the top management. The company has granted Porvoon Alueverkko Oy two separate loans. One is a floating rate loan linked to the six months euribor. The loan is redeemed annually and matures 28 May 2008. The borrower has the right to early redemption at each interest payment date. The other loan is linked to the five-year TyEL (Finnish Employee Pensions Act) reference rate and the loan finally matures 28 May 2008. Fingrid Oy has granted Porvoon Alueverkko Oy a counter guarantee of 1.7 million euros. Business with related parties are conducted at market prices.

Employee benefits of top management, 1,000 €	2007	2006
Salaries and other short-term employee benefits	1,111	1,178

Sales	86,256	84,277
Purchases	43,828	56,880
Receivables	6,186	2,111
Liabilities	4,639	5,329

General procurement principles

The group follows three alternative procurement methods when purchasing goods or services. When the costs and value of the purchase are less than 5,000 euros, an oral call for bid is made and written order or purchasing contract. When the procurement exceeds 5,000 euros but is below the values applied to public procurements, bids are requested and competitive bidding is arranged. When the limits for public procurements concerning Fingrid (0.4 million euros for goods and services and 5.3 million euros for construction projects in 2007) are exceeded, the company applies the public procurement procedure.

34. EMISSION RIGHTS

In the initial allocation of emission rights, Fingrid was granted a total of 13.4 thousand tonnes of emission rights for 2005 - 2007 (Olkiluoto power station was granted 4.2 thousand tonnes in 2007). Of this volume, 6.6 thousand tonnes were used in 2007 (2006: 2.4 thousand tonnes). The use of emission rights did not impact the profit in 2005 and 2006, because the company only used emission rights obtained free of charge. In 2007 the company bought 2.0 thousand tonnes, which had minor impact on costs.

35. EVENTS AFTER CLOSING DATE

The Group management is not aware of such essential events after the closing date that would affect the financial statements.

NOTES TO THE FINANCIAL STATEMENTS OF PARENT COMPANY

1. ACCOUNTING PRINCIPLES

Fingrid Oyj's financial statements have been drawn up in accordance with Finnish Accounting Standards (FAS). The items in the financial statements are valued at original acquisition cost.

Foreign currency transactions

Commercial flows and financial items denominated in foreign currencies are booked at the foreign exchange mid-rate quoted by the European Central Bank (ECB) at the transaction value date. Interest-bearing liabilities and assets and the derivatives hedging these items are valued at the mid-rate quoted by ECB at the closing day. Realised foreign exchange gains and losses of interest-bearing liabilities and assets and of the related derivatives are booked under finance income and costs at maturity. The realised foreign exchange rate differences of derivatives hedging commercial flows adjust the corresponding item in the income statement.

Interest rate and foreign exchange derivatives

In accordance with the financial policy, interest rate and cross-currency swaps, foreign exchange forwards and interest rate options are used for hedging Fingrid's interest and foreign exchange exposure of balance sheet items, interest flows and commercial flows. The accounting principles for derivatives are the same as for the underlying items. The interest flow of interest rate and cross-currency swaps and interest rate options is accrued and booked under interest income and expenses. The interest portion of forward foreign exchange contracts hedging the interest-bearing liabilities and assets is accrued over their maturity and booked under finance income and costs. Up-front paid or received premiums for interest rate options are accrued over the hedging period.

Electricity derivatives

Fingrid Oyj hedges the loss energy purchases by using bilateral contracts and electricity exchange products, such as forwards, futures and options. The price differentials arising from these contracts are booked at maturity adjusting the loss energy purchases in the income statement. Up-front paid or received premiums for options are accrued over the hedging period.

Research and development expenses

Research and development expenses are entered as annual expenses.

Valuation of fixed assets

Fixed assets are capitalised under immediate acquisition cost. Planned straight-line depreciation on the acquisition price is calculated on the basis of the economic lives of fixed assets. Depreciation on fixed assets taken into use during the financial year is calculated asset-specifically from the month of introduction.

The depreciation periods are as follows:

Goodwill	20 years
Other non-current expenses	
Rights of use to line areas	30-40 years
Other rights of use according to economic lives, maximum	10 years
Computer systems, operation control	7-15 years
Computer systems, others	3 years
Buildings and structures	
Substation buildings and separate buildings	40 years
Substation structures	30 years
Buildings and structures at gas turbine power plants	20 years
Separate structures	15 years
Transmission lines	
Transmission lines 400 kV	40 years
Direct current lines	40 years
Transmission lines 110-220 kV	30 years
Creosote-impregnated towers and related disposal expenses*	30 years
Aluminium towers of transmission lines (400 kV)	10 years
Optical ground wires	10-20 years
Machinery and equipment	
Substation machinery	10-30 years
Gas turbine power plants	20 years
Other machinery and equipment	3-5 years

*The disposal expenses are discounted at present value and added to the value of fixed assets and booked under provisions for liabilities and charges.

Goodwill is depreciated over a 20-year period, since power transmission operation is a long-term business in which income is accrued over several decades.

Emission rights

Emission rights are treated in accordance with the net procedure in conformance with statement 1767/2005 of the Finnish Accounting Board.

Valuation of inventories

Inventories are entered according to the FIFO principle at the acquisition cost, or at the lower of replacement cost or probable market price.

Cash in hand, bank receivables and financial securities

Cash in hand and bank receivables include cash assets and bank balances. Financial securities include certificates of deposit, commercial papers, treasury bills and investments in short-term money-market funds. Quoted securities and comparable assets are valued at the lower of original acquisition cost or probable market price.

Interest-bearing liabilities

Fingrid's non-current interest-bearing liabilities consist of loans from financial institutions and bonds issued under the international and domestic Debt Issuance Programmes. The current interest-bearing liabilities consist of commercial papers issued under the domestic and international programmes and of the current portion of noncurrent debt and bonds maturing within a year. The outstanding notes under the programmes are denominated in euros and foreign currencies. Fingrid has both fixed and floating rate debt and debt with interest rate structures. The interest is accrued over the maturity of the debt. The differential of a bond issued over or under par value is accrued over the life of the bond. The arrangement fees of the revolving credit facilities are as a rule immediately entered as expenses and the commitment fees are accrued over the maturity of the facility.

Financial risk management

The principles applied to the management of financial risks are presented in the notes of the Group under item 32.

Income taxes

The taxes include the accrued tax corresponding to the profit of the financial year as well as adjustments of taxes for previous financial years.

Deferred taxes

Deferred tax assets and liabilities are not recorded in the profit and loss statement or balance sheet. Information concerning these is presented in the notes.

2. REVENUE BY BUSINESS AREAS

The business of Fingrid Oyj comprises entirely transmission grid business with system responsibility. Because of this there is no division of revenue into separate business areas.

1 Jan 2007	2,078	1,247	3,325
31 Dec 2007	2,078	1,247	3,325

Series A shares confer three votes each at a shareholders' meeting and series B shares one vote each. When electing members of the Board of Directors, series A share confers 10 votes each at a shareholders' meeting and each series B share one vote each.

Series B shares have preferential right over series A shares to obtain the annual dividends specified below from the funds available for profit distribution. After this, a corresponding dividend is distributed to series A shares. If the annual dividend cannot be distributed in some year, the shares confer a right to receive the undistributed amount from the funds available for profit distribution in the subsequent years; however so that series B shares have preferential right over series A shares to receive the annual dividend and the undistributed amount.

A shareholders' meeting decides on the annual dividend for series B shares on the following grounds: The amount of the annual dividend is calculated on the basis of calendar years so that the subscription price of a share, added by amounts paid in conjunction with potential increases of share capital and reduced by potential amounts paid in refunds of equity, is multiplied by the dividend percentage; however so that the minimum dividend is 6%. The dividend percentage is defined on the basis of the yield of the 30-year German Government Bond.

Series B shares have preference with respect to dividends as stipulated in the Articles of Association. The dividend for 2007 is 6.41% p.a. of the subscription price of the share.

There are no minority interests.

21. ACCUMULATED PROVISIONS, 1,000 €	2007	2006
Accumulated depreciation in excess of plan, the difference between depreciation according to plan and depreciation carried out in taxation	353,253	322,555

22. CAPITAL LOAN, 1,000 €	2007	2006
Debenture of capital loan nature 1997		137,914
Debenture of capital loan nature 1999	30,000	30,000
Total	30,000	167,914

The terms of the capital loan fulfil the requirements of Chapter 5, Section 1 of the Companies Act (29.9.1978). The principal and interest for capital loans can be repaid only after debts with higher claim in the event of the liquidation or bankruptcy of the company.

The capital loan is publicly quoted and registered in the book-entry system of Finnish Central Securities Depository Ltd.

Debenture of capital loan nature 1997

According to the loan agreement, the company decided to redeem early on 15 May 2007 the principal and accrued interest at par.

Debenture of capital loan nature 1999

The loan becomes due on 30 November 2029, but, if the company so decides, it can be paid back on 30 November 2009 or 30 November 2019 at 100% rate. The coupon rate is 6.388% p.a. until 30 November 2009, after which the interest rate is the 6 month Euribor + 2.28% p.a. until 30 November 2019. After this, the coupon rate is the 6 month Euribor + 3.28% p.a.

Electricity forward contracts, others	1,993	0.14	1,131	0.14
Total	22,792	3.46	-1,878	2.96

Interest rate and cross-currency swaps and interest rate options are mark-to-market at the closing date so that the derived net cash flow is calculated on a net present value basis. Currency forwards are mark-to-market by using prevailing forward rates at the closing date.

Electricity forward contracts, others, includes bilateral financial and physical purchase commitments concerning electricity purchases, not cleared separately by a clearing organisation. The derivatives hedge future electricity losses.

The net fair value of derivatives indicates the realised profit/loss if they had been reversed on the last business day of 2007.

32. LEGAL PROCEEDINGS AND PROCEEDINGS BY AUTHORITIES

There are no ongoing legal proceedings or proceedings by authorities that would have a material impact on the business of the company. In relation to transmission line projects there are several complaints made to different instances of justice. According to the management of the company there are no on going legal proceedings or other such legal proceedings relating to other areas, which final outcome would have a material impact on the financial position of the Group. In January 2008 Fingrid Oyj appealed to the market court relating to the decision 13 December 2007 by the Energy Market Authority "Determination of the methodology for the assessment of the return of the grid owners grid operations and for transmission services pricing for the review period starting 1 January 2008 ending 31 December 2011".

33. SEPARATION OF BUSINESSES IN ACCORDANCE WITH THE ELECTRICITY MARKET ACT

Balance power and regulating power

Each electricity market party must ensure that its electricity balance is in balance by making an agreement on this with either Fingrid or some other party. Fingrid buys and sells balance power so as to balance the hourly power balance of an electricity market party (balance provider). Balance power trade and pricing of balance power are based on a balance service contract with equal and public terms and conditions.

Fingrid takes care of the continuous power balance in Finland by buying and selling regulating power in Finland. The balance providers can participate in the Nordic regulating power market by submitting bids of their available capacity. The terms and conditions of participation in the regulating power market and the pricing of regulating power are based on the balance service contract.

Management of balance operation

In accordance with a decision by the Energy Market Authority, Fingrid Oyj shall separate the duties pertaining to national power balance operation from the other businesses by virtue of Chapter 7 of the Electricity Market Act.

The profit and loss account of the balance operation unit is separated by means of cost accounting as follows:

Income	direct
Separate costs	direct
Production costs	matching principle
Administrative costs	matching principle
Depreciation	matching principle in accordance with Fingrid Oyj's depreciation principles
Finance income and costs	on the basis of imputed debt
Income taxes	based on result

The average number of personnel during 2007 was 12 (12). The operating profit was 4.0 (4.1) per cent of turnover. The return on investment was 27.4 (55.1) per cent.

MANAGEMENT OF BALANCE OPERATION, SEPARATED PROFIT AND LOSS ACCOUNT	1 Jan - 31 Dec 2007 1,000 €	1 Jan - 31 Dec 2006 1,000 €

Transmission system operation

Transmission system operation is deemed to cover the entire business of Fingrid Oyj, including system responsibility, which in turn includes balance operation.

Therefore, Fingrid Oyj's financial statements represent the financial statements of transmission system operation.

34. KEY INDICATORS OF TRANSMISSION SYSTEM OPERATION	2007	2006
Return on investment (ROI) in transmission system operation, %	5.9	7.2

Return on investment, % = $\frac{\text{Profit before extraordinary items + interest and other finance costs + interest portions of leasing fees and rents of electricity grid}}{\text{Balance sheet total - non-interest-bearing liabilities + leasing and rent liabilities related to electricity grid (average for the year)}} \times 100$

35. EMISSION RIGHTS

In the initial allocation of emission rights, Fingrid was granted a total of 13.4 thousand tonnes of emission rights for 2005 - 2007 (Olkiluoto power station was granted 4.2 thousand tonnes in 2007). Of this volume, 6,6 thousand tonnes were used in 2007 (2006: 2.4 thousand tonnes). The use of emission rights did not impact the profit in 2005 and 2006, because the company only used emission rights obtained free of charge. In 2007 the company bought 2.0 thousand tonnes, which had minor impact on expenses.
