

AMG ADVANCED METALLURGICAL GROUP N.V. SUBSIDIARY AMG INTELLIFAST TO PROVIDE ADVANCED FASTENER TECHNOLOGY TO PREMIUM AEROTEC

Amsterdam, 23 July 2014 --- AMG Advanced Metallurgical Group N.V. ("AMG", Euronext Amsterdam: "AMG") announces that its AMG Intellifast subsidiary has finalized a long-term supply agreement with Premium AEROTEC to supply advanced technology to measure load control pathways in the manufacture of airframe components. Under this five-year agreement, AMG Intellifast will supply ultrasonic products to provide precise measurements of the clamp load of the fasteners that are critical to maintain and monitor the Airbus A380 wing flaps.

"We are very excited about the opportunity to provide our innovative metallurgical technology to the aerospace industry and Premium AEROTEC," said Dr. Markus Holz, President of AMG Engineering, "It is our belief that this agreement, and future agreements, will serve the strategic interests of both companies."

AMG Intellifast's technology enables the fast and accurate measurement of the clamp load in bolted joints used in critical applications. Using ultrasonic measurement techniques, AMG Intellifast equips standard bolts with a permanent mounted ultrasonic transducer, which can provide accurate clamp load measurement during assembly and in the field. This provides precise information about the bolted joint condition and enables the use of a reduced tightening, lighter materials, and smaller fasteners, all of which are important factors in aerospace applications.

About AMG

AMG creates and applies innovative metallurgical solutions to the global trend of sustainable development of natural resources and CO₂ reduction. AMG produces highly engineered specialty metal products and advanced vacuum furnace systems for the Energy, Aerospace, Infrastructure, and Specialty Metals and Chemicals end markets.

AMG Processing develops and produces specialty metals, alloys, and high performance materials. AMG is a significant producer of specialty metals, such as ferrovanadium, ferronickel-

molybdenum, aluminum master alloys and additives, chromium metal and ferrotitanium, for Energy, Aerospace, Infrastructure and Specialty Metal and Chemicals applications. Other key products include specialty alloys for titanium and superalloys, coating materials and vanadium chemicals.

AMG Engineering designs and produces advanced vacuum furnace systems, and operates vacuum heat treatment facilities, primarily for the Aerospace and Energy (including solar and nuclear) industries. Furnace systems produced by AMG include vacuum remelting, solar silicon melting and crystallization, vacuum induction melting, vacuum heat treatment and high pressure gas quenching, turbine blade coating and sintering. AMG also provides vacuum case-hardening heat treatment services on a tolling basis.

AMG Mining produces critical materials utilizing its secure raw material sources in Africa, Asia, Europe, and South America. AMG Mining produces critical materials such as high purity natural graphite, tantalum, antimony and silicon metal. These materials are of significant importance to the global economy and are available in limited supply. End markets for these materials include electronics, energy efficiency, green energy, and infrastructure.

With over 3,100 employees, AMG operates globally with production facilities in Germany, the United Kingdom, France, Czech Republic, United States, China, Mexico, Brazil, Turkey, Poland, India, and Sri Lanka, and has sales and customer service offices in Belgium, Russia, and Japan (www.amg-nv.com).
