Operational plans

Group plans to reach LTL 628 million retail chain turnover (including VAT) in 2014 or by 7.5% more, than actual the year 2013 turnover (LTL 584 million).

Group plans to open or reconstruct 25-30 stores during 2014. The investments are planned to amount to about LTL 22-25 million.

Risk management

Financial risk factors

The risk management function within the Group is carried out in respect of financial risks (credit, market, currency, liquidity and interest rate), operational risks and legal risks. The primary objectives of the financial risk management function are to establish risk limits, and then ensure that exposure to risks stays within these limits. The operational and legal risk management functions are intended to ensure proper functioning of internal policies and procedures to minimize operational and legal risks.

The financial risks relate to the following financial instruments: trade receivables, cash and cash equivalents, trade and other payables, bonds and borrowings. The accounting policy with respect to these financial instruments is the same as it was in 2013.

Credit risk

Credit risk is managed on Group basis. Credit risk arises from cash and cash equivalents and deposits with banks and financial institutions, as well as credit exposures to wholesale and retail customers, including outstanding receivables and committed transactions. For banks and financial institutions, only independently rated parties with high credit ratings are accepted. Sales to wholesale customers are rare and immaterial; therefore risk control only assesses the credit quality of the customer, taking into account its financial position, past experience and other factors. Sales to retail customers are settled in cash or using major credit cards.

Company's credit risk arising from trade receivables from subsidiaries and loans to subsidiaries is managed by controlling financial performance of subsidiaries on a monthly basis.

The Company and the Group has no significant concentration of credit risk.

Liquidity risk

Liquidity risk management implies maintaining sufficient cash, the availability of funding through an adequate amount of committed credit facilities. Due to the dynamic nature of the underlying businesses, Group treasury maintains flexibility in funding by maintaining availability under committed credit lines.

Management monitors rolling forecasts of the Group's liquidity reserve (comprises undrawn borrowing facility and cash and cash equivalents) on the basis of expected cash flow. This is generally carried out at local level in the operating companies of the Group in accordance with practice set by the Group. In addition, the Group's liquidity management policy involves projecting cash flows and considering the level of liquid assets necessary to meet these; and maintaining debt financing plans.

Market risk

Cash flow and fair value interest rate risk

As the Group has no significant interest-bearing assets, its income and operating cash flows are substantially independent of changes in market interest rates. The Company has loans to subsidiaries with floating interest rates, but the cash flow risk is mitigated by applying the same variable element of interest rate on those loans as the banks are charging the Company.

The Group's interest rate risk arises from borrowings. Borrowings issued at variable rates expose the Group to cash flow interest rate risk. Borrowings issued at fixed rates expose the Group to fair value interest rate risk, but this is not included in sensitivity analysis as the change in interest rates has no impact on profit or equity of the Group.

The Company's and Group's borrowings consist of loans with floating interest rate, which is related to VILIBOR. The Company and the Group did not use any derivative financial instruments in order to control the risk of interest rate changes.

Trade and other receivables and payables are interest-free and have settlement dates within one year.

The Group's cash flow and fair value interest rate risk is periodically monitored by the Group's management. It analyses its interest rate exposure on a dynamic basis taking into consideration refinancing, renewal of existing positions, alternative financing. Based on these scenarios, the Group calculates the impact on profit and loss of a defined interest rate shift. The scenarios are run only for liabilities that represent the major interest-bearing positions.

Based on the simulations performed, management considers the impact on post-tax profit of a 0.5% shift in interest rates to be not material to the financial statements of the Group and the Company.

Foreign exchange risk

The Company and the Group has a policy to synchronize the cash flows from expected sales in the future with the expected purchases and other expenses in each foreign currency. At the moment the Company and the Group doesn't use any derivative financial instruments in order to control foreign currencies exchange risk.

The Group operates in Lithuania, Latvia and Estonia and accordingly has three functional currencies that all are pegged with EUR (Estonia since 1st January 2011 has adopted the euro; Latvia – since 1st January 2014) and do not fluctuate significantly. Therefore neither the Group, nor the Company is exposed to any significant foreign exchange risk.

Price risk

The Group is not exposed to the market risk with respect to financial instruments as it does not hold any equity securities.

Capital risk management

The Group's objectives when managing capital are to safeguard the Group's ability to continue as a going concern in order to provide returns for shareholders and benefits for other stakeholders and to maintain an optimal capital structure to reduce the cost of capital. In order to maintain or adjust the capital structure, the Group may adjust the amount of dividends paid to shareholders, return capital to shareholders, issue new shares or sell assets to reduce debt.

Consistent with others in the industry, the Group monitors capital on the basis of the gearing ratio. This ratio is calculated as net debt divided by total capital. Net debt is calculated as total borrowings (including 'current and non-current borrowings' as shown in the consolidated balance sheet) less cash and cash equivalents. Total capital is calculated as 'equity' as shown in the consolidated balance sheet plus net debt.

Pursuant to the Lithuanian Law on Companies the authorized share capital of a public limited liability company must be not less than LTL 150 thousand and of a private limited liability company must be not less than LTL 10 thousand. In addition, for all entities the shareholders' equity should not be lower than 50 per cent of the company's registered share capital. As at 30 June 2014, the Company and all its Lithuanian subsidiaries complied with these requirements.

Pursuant to the Latvian Commercial Law the authorized share capital of a private limited liability company must be not less than EUR 2 800. In addition, the losses of the company should not exceed 50 per cent of the company's share capital. As at 30 June 2014, all the Company's Latvian subsidiaries complied with these requirements.
