Alfa Laval wins SEK 120 million offshore pumping systems order in Canada

Alfa Laval – a world leader in heat transfer, centrifugal separation and fluid handling – has won an order to supply Framo water pumping systems to an oil drilling platform that will be located in the Atlantic Ocean off the Canadian coast. The order, booked in the Marine & Offshore Pumping Systems segment, has a value of approximately SEK 120 million and delivery is scheduled for 2015.

The order consists of water pumping systems for an offshore oil platform that will be located east of Newfoundland.

“I am pleased to announce the second large order for our Framo products since the brand was included in our offering through the acquisition of Frank Mohn AS,” says Lars Renström, President and CEO of the Alfa Laval Group. “These products fit very well in our portfolio of reliable and efficient products for the marine and offshore oil and gas markets.”

Did you know that... the Canadian crude oil production will increase from 3.5 million barrels per day in 2013, to 6.4 million barrels per day by 2030, according to the Canadian Association of Petroleum Producers?

About Alfa Laval

Alfa Laval is a leading global provider of specialized products and engineering solutions based on its key technologies of heat transfer, separation and fluid handling.

The company's equipment, systems and services are dedicated to assisting customers in optimizing the performance of their processes. The solutions help them to heat, cool, separate and transport products in industries that produce food and beverages, chemicals and petrochemicals, pharmaceuticals, starch, sugar and ethanol.
