Installation of the first XPS™ in Asia

Medcor LLP has purchased an XVIVO Perfusion System (XPS™). Medcor will cooperate in the establishment of a new clinical program for lung transplantation and Ex Vivo Lung Perfusion (EVLP) in Almaty, Kazakhstan. This is the first XPS™ sold in Asia.

Strategic collaborations between University Hospitals in Kazakhstan with prestigious Universities in the U.S. and Europe have resulted in unique collaborations to improve health care quality through exchange of knowledge and skills in a variety of areas, including lung transplantation. Lung transplantation is the only therapeutic option for selected patients suffering from end stage lung diseases. Earlier this year, Kazakhstan Vice-Minister of Healthcare Erik Baizhunossov, announced that the first lung transplantation will be made in Kazakhstan in 2014.

“We are ready for this type of transplantation. There are many patients who need this surgery as no other kind of surgery can save them. I think that we will be able to begin this surgery in 2014,” said Mr Baizhunossov.

At present, Asia accounts for less than five percent of the total number of lung transplants carried out in the world, but with increased economic opportunities, the number of lung transplants may increase. In instituting the STEEN Solution™ method with XPS™ early in these markets, this development can occur more rapidly than would otherwise be possible.

“It is a great pleasure to note that the XPS™ will be used to support the establishment of a new clinical program for lung transplantation in Asia. This is a great step forward to establish EVLP throughout the globe”, says Mr Christer de Flon, Marketing & Sales Director, XVIVO Perfusion.
