

Nederman receives two orders in America with a total value of SEK 69 million.

Nederman has received an order on multiple air filtration systems to a customer within the environmental recycling industry and an order to an electric power generation plant in South America. The two orders are in total worth SEK 69 million.

The environmental recycling solution is a repeat order to a Nederman customer and includes three multi module dust collection systems with associated ancillary equipment and controls. The electric power facility order includes a pulse jet self-cleaning cartridge filter system and silencer.

“We continue to strengthen our position in the USA. These orders confirm our ability to fulfil the customers’ need of eco-efficient solutions that filter, clean and recycle, obtain repeat orders and attract new customers,” says Sven Kristensson, Nederman’s CEO.

The orders will be booked in the third quarter of 2014 and are expected to be delivered and installed during Q2 and Q3 2015.
