Abbreviations

OR:	Orkuveita Reykjavíkur -- Reykjavík Energy
NV:	Nesjavallavirkjun -- Geothermal Power Plant at Nesjavellir
HH:	Hellisheiðarvirkjun -- Geothermal Power Plant at Hellisheiði
AV:	Andkílsárvirkjun -- Hydro-Electrical Power Station at Andakíll
HAB:	Hot Water System of Akranes and Borgarnes

Owner's policy

The budget considers the owners policy, agreed on by the municipalities and confirmed at an owners meeting in April 2014. The policy emphasizes respect for the environment, responsible utilization of natural resources and contentious use of assets. Also ensuring professionalism, efficiency, prudence, transparency and operational dependability. In addition the policy stipulates that The Board of OR shall develop a general policy and also submit to the owners for approval proposals for policy on the following issues:

- Policy on return on capital
- Risk policy
- Environmental and natural resources policy
- Policy on security, health and occupational safety
- Procurement policy
- Policy on information security
- IT policy
- Human resources policy
- Compensation policy
- Equal opportunity policy
- Ethics policy

The company has finalized policy on all the issues above except for return on capital which is being considered. The Board of OR shall recommend a dividend policy encompassing that dividends are to be paid out to owners after meeting financial restraints including that the company's financial strength is sufficient to meet investing and operational needs. The budget rests on these stated policies, emphasizing issues of risk and protection of the environment and natural resources.

The owners policy also states the financial constraint that OR must finance a project in the same currency as the company will receive its revenue from. The company's risk policy also stipulates that currency risk shall be reduced and Current Ratio shall be above a predefined value.

The Plan

The budget for OR and its subsidiaries for the year 2015 and the long term plan for 2016 – 2020 are the first ones conducted after the company was split up, by law, at the turn of last year. The Plan consolidates a forecast for OR, the parent company, and its subsidiaries OR Distribution, OR Waterworks and Sewage, Our Nature and Reykjavik's Fibre optic. Each company's plan was approved by their board before the consolidated plan was approved by The Board of OR. The Plan is based on and in accordance with THE PLAN, OR's and its owners action plan, confirmed in the spring of 2011, The Official National Economic Forecast, international forecasts on external factors affecting The Company and the opening balance sheets of entities with-in The OR Group as approved by The Board of OR in May 2014 and confirmed by owners. The Plan is also based on the owner's policy regarding OR's business activities and practices as approved at an owners meeting in April 2014.

The year 2015 is the second to last year of THE PLAN. At the beginning of this year OR has put behind it 15 of the 23 quarters THE PLAN encompasses. At this point everything has been achieved as planned on all

INTRODUCTION

fronts and some even better. Cost cuts in operations have exceeded what was aimed for in THE PLAN and The Budget for the year 2015 bears witness to increases where the cut-backs have hurt the most.

The splitting up of the company has given rise to increased costs that have to be met. Resulting in expected rise in operation expenses in the year 2015.

Investment will also increase. THE PLAN accounts for important projects in the sewage system that were postponed during the direst financial difficulties and are to be commenced in 2015. The construction of a new transformer station in Akranes is also planned. The station is a prerequisite for exchanging oil for renewable energy in fish processing. Improvements in the capital area on The Reykja-Supply-Pipes and on The Deildartungu-Supply-Pipe will be continued. These projects need go faster, finances permitting.

Obtaining supplemental steam for HH by connecting wells in Hverahlíð is an important investment project. For the same purpose a new well will be drilled at The Power Plant at Nesjavellir. This will be the first hole to be drilled in that area since 2008. Projects to improve the environment on Hellisheiði are being emphasized. Cleaning gases at The Power Plant in a scrubbing plant and with an air extraction hood are important development and innovation projects as well as the projects to restore the land after construction damages being conducted in an organized and scientific manner.

The increase in OR's revenue due to increased power production and adjustments of rates structure are behind us. By keeping a tight rein on expenses, profit levels of the last two years are expected to be maintained for the next few years. Thus gradually the debt burden will be reduced. The burden that was overwhelming the operations finances when THE PLAN was launched.

The Financial Forecast for the years 2016 – 2020, which is a part of this Plan, entails that the spirit of THE PLAN is carried forward after 2016 in the operations of OR and its subsidiaries for the years 2011 – 2016. Prudence will prevail as a guiding light for the operations, which all aim at guaranteeing people and companies a secure and good access to the utility services at low cost.

OR's budget for the year 2015 and the five year forecast for the years 2016 – 2020 now goes to The City of Reykjavík for consideration as part of the consolidated financial plans for The City.

The operating area reaches both the south and the west lands in addition to the capital region. OR owns and operates three power plants, the geothermal plants at Nesjavellir and Hellisheiði and the hydro-electrical power station at Andakill in the country of Borgarfjörður. The geothermal plants are both considerably more powerful than the hydro-electric power station.

POWER PLANTS

The Geothermal plant at Nesjavellir delivers electrical power of 120 MW and the one at Hellisheiði 303 MW. The power of the Hydro-Electric Power Station at Andakill is 9 MW.

ELECTRICITY DISTRIBUTION

OR's distribution of electricity reaches more than half the population of the country in six municipalities by Faxaflói. The distribution system in the capital region is connected to the country's transmission system at three points, namely the main transmission stations at Korpa, Geitháls and Hnoðraholt. From these points the electricity is transmitted to 13 transmission stations around the capital area.

HOT WATER DISTRIBUTION

In the capital area, Reykjavik Energy operates the world's largest geothermal district heating system. The most extensive production of hot water is in the high-temperature area Nesjavellir or, 300 MWth. In Low-temperature areas Reykjavik Energy produces a total of 600 MWth. The power plant Hellisheiði produces 133 MWth of hot water.

WATER WORKS

OR operates 13 water distribution systems in its area of operations and supplies two other systems on a whole sale basis. All in all OR supplies more than half the population of Iceland with fresh water.

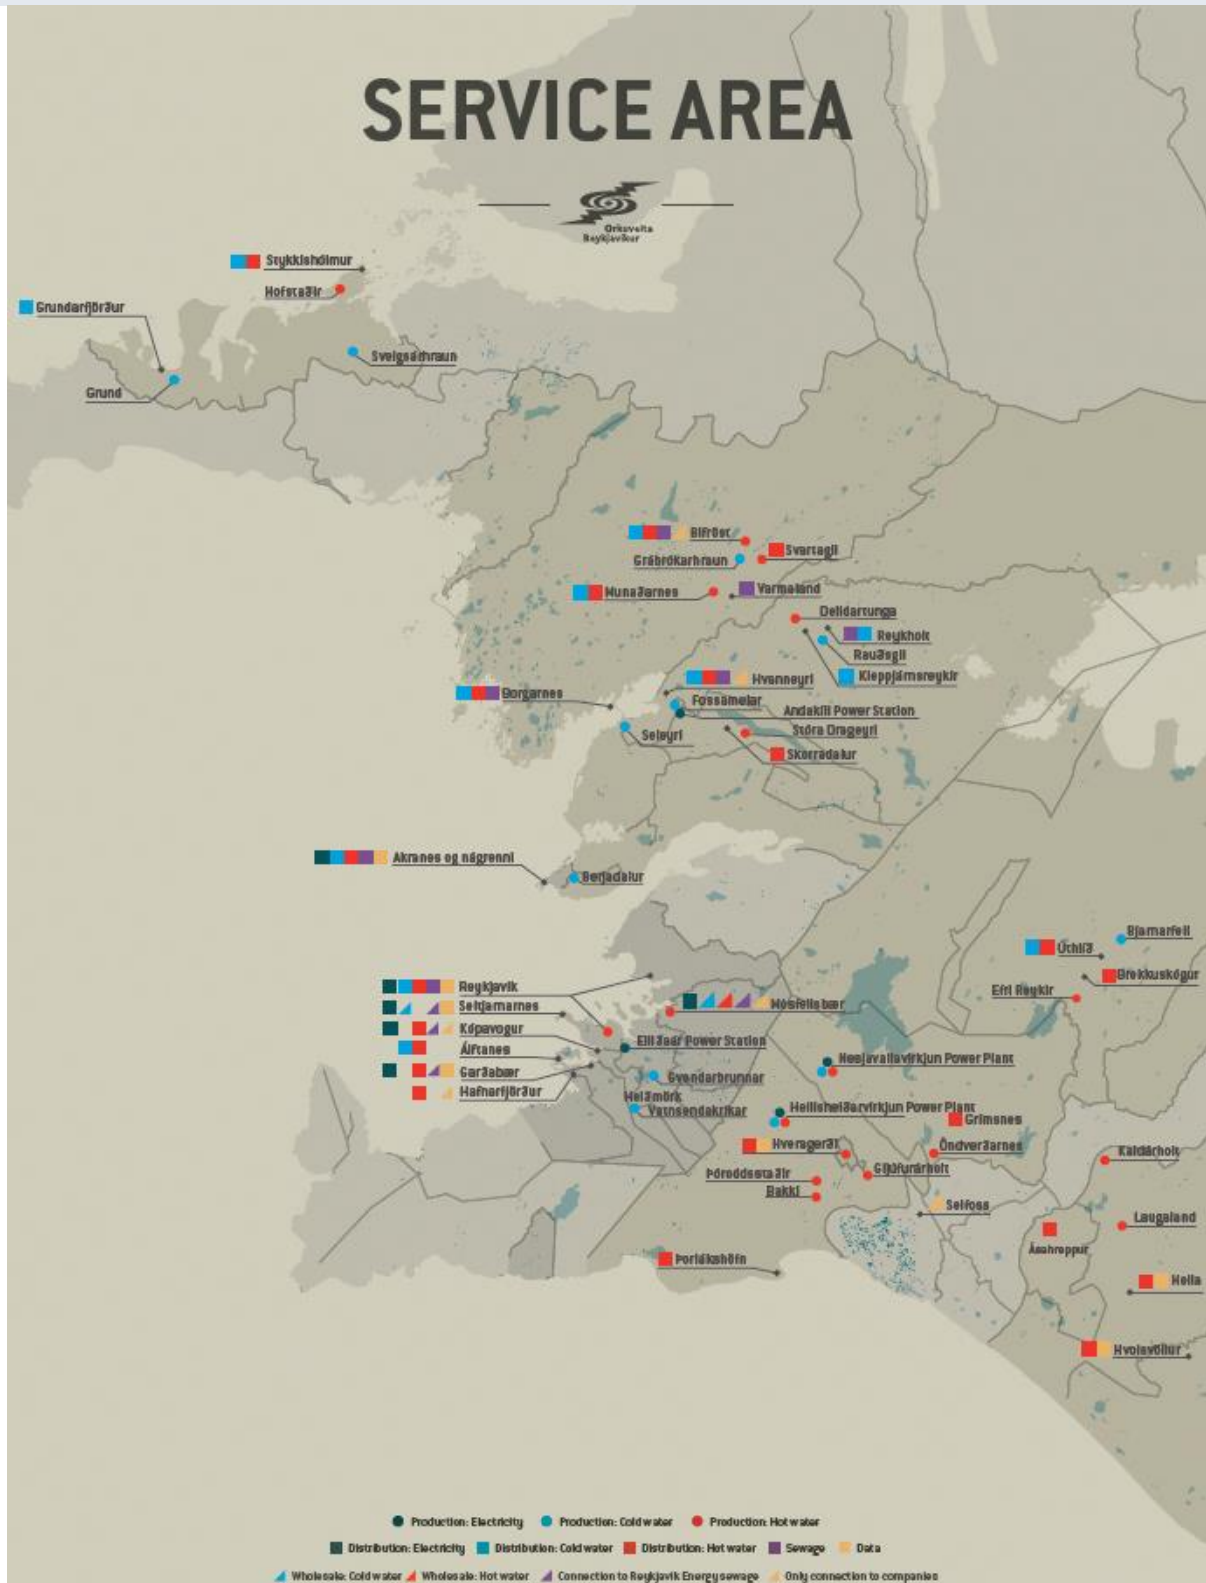

SEWAGE SYSTEM

OR owns sewage systems in six municipalities and also operates pumping stations for two other municipalities. OR thus serves the sewage needs of more than half the population of Iceland.

FIBRE OPTIC

OR has developed a valuable fibre-optic cable system, benefitting homes and businesses in the south-west.

BUDGET'S PREREQUISITES AND CRITERIA

THE PLAN's results for the period 2011-2014H1 exceed expectations. All components of THE PLAN are on schedule.

THE PLAN

Plan	2011	2012	2013	2014	2015	2016	ALLS
Investment reduction in distribution systems	1.205	3.518	2.690	2.518	2.410	2.659	15.000
Sale of assets	1.000	2.000	5.100	1.900	-	-	10.000

Total	13.118	10.747	18.301	4.317	-	-	-	46.437

Prerequisites

The prerequisites for The Budget for the year 2015 and the forecast for the financial plans for the years 2016-2020 are based on Static's Economic forecast published in July 2014 also on forecasts from The Central Bank of Iceland and on forecasts by OR's staff. Criteria for aluminium prices are from The London Metal Exchange. Forecast for interest rates was based on implied forward rate according to currencies and interest rates of discrete loan agreements.

BUDGET'S PREREQUISITES AND CRITERIA

PREREQUISITES

LIST	2014	2015	2016	2017	2018	2019	2020
The Consumer Price Index, change (%)	2,5	3,4	3,2	2,8	2,6	2,5	2,5
The Building Cost Index Dec-Dec, change (%)	1,7	3,4	3,2	2,8	2,6	2,5	2,5
Currency, Narrow Trade Index (points)	203,2	206,8	208,1	208,1	208,1	208,1	208,1
Aluminium prices, average for the year (\$)	2.085	2.143	2.197	2.251	2.307	2.366	2.425

Criteria

The financial planning was guided by OR's treasury and risk policy as approved by The Board in October 2013 and confirmed at the owners meeting in November 2013.

The policy requires a plan for funding aiming at guaranteeing a forward secure funding of three years. In addition to strive for a current ratio greater than 1.

THE PLAN did not allow for any new borrowing as OR's access to loans was non-existent. Now that the goals of THE PLAN have been realized and then somewhat, OR has access to financial markets to borrow and engage in risk hedging. Therefore it is now planned that OR will borrow to strengthen its cash position and fulfil the policy's goals. The borrowing aims first and foremost at guaranteeing the company's financial position and to maintain its strong cash position.

The Budget encompasses current risk hedges as the company plans to protect itself from outside risk in tune with its risk policy. The pertinent outside risk parameters are market price of aluminium, interest rates and currency exchange rates. New financing is expected to be in foreign currency e.g. to reduce the forex risk on cash-flow. Picture 2, on page 10, shows the ratio of foreign currency and foreign currency assets against outflows. The ratio would be lower were no steps to be taken.

Investment will for the most part be financed by cash flow from operations. The company's investment needs will increase in the coming years in wake of THE PLAN and increasing environmental considerations. Part of the investments will be funded by loans.

The Company purposefully aims at greater financial health. In accordance with the owners policy and their action plan. This entails to resolutely improve key figures in operations e.g. current ratio, equity ratio, debt coverage and others. The following table shows key figures at the end of 2014 and estimates for the following years:

KEY FIGURES	2014	2015	2016	2017	2018	2019	2020
EBITDA/Operating revenue	61.2%	60.0%	60.7%	60.4%	60.3%	60.8%	58.7%
Equity ratio	32.7%	34.6%	38.0%	40.8%	43.9%	48.0%	52.6%
Current ratio	0.6	0.9	0.9	1.0	1.0	0.8	0.8
(Interest bearing liabilities - Cash) / EBITDA	7.2	6.8	5.5	4.9	4.4	3.8	3.4

BUDGET'S PREREQUISITES AND CRITERIA

Investment priorities and assessment

OR's owner's policy defines the company's role and core business. This forms the basis for assessing investment priorities. The projects counted in the investment plan have been thoroughly considered and prioritized before presentation. In advance of a final decision, further preparatory studies are conducted as well as a comprehensive risk analysis. Following this phase, every project is considered by each subsidiary and then sent to The Board of OR and owners for approval as appropriate, all according to predefined procedures.

Objective analysis of the following issues is considered:

- Increased use or demand
- Break-down history
- Age
- Materials
- Status analysis
- Employees and customers safety
- Service security

According to the latest review profit for the year 2015 is expected to be ISK 6,179 million, compared to ISK 11,884 million for 2014. Thus resulting in a reduction of ISK 5,705 million. Equity ratio is expected to be 34.6% at year end 2015 compared to 32.7% year end 2014.

INCOME STATEMENT

Revenue

Operating revenue for the year 2015 is expected to be ISK 39,952 million against ISK 37,807 million according to the review for the year 2014. Retail revenue is expected to increase by ISK 482 million and revenue from whole sale by ISK 1,733 million.

Expenses

Budgeted operating costs before depreciation for the year 2015 are ISK 15,982 million compared to ISK 14,672 million according to review for the year 2014 an increase of 8.9%. Energy purchases and transmission costs increase between the years by ISK 289 million or 5.3%.

BALANCE SHEET

Assets

Total assets are expected to be ISK 286.8 billion at year end 2015 compared to ISK 282.2 billion at year end 2014, an increase of 1.6%.

Equity and liabilities

Equity is expected to be ISK 99.3 billion at year end 2015 compared to ISK 92.4 billion at year end 2014. Liabilities are expected to be reduced from ISK 189.9 billion down to ISK 187.5 billion at year end 2015, a reduction of 1.2% year on year.

CASH FLOW

Net cash from operating activities

Cash flow from operations is expected to be ISK 18.8 billion for the year 2015 compared to ISK 19.9 billion for the year 2014.

Investment activities

Investment in fixed assets is expected to be ISK 10.3 billion for the year 2015 compared to ISK 3.8 billion for the year 2014.

The Board's policy of concentrating on core activities and divestment of non-core assets will be adhered to. In The Review the divestment is expected to be ISK 2.5 billion. The success of this plan will lead to fulfilment of THE PLAN in this respect.

Five year financial forecast 2016 – 2020

INCOME STATEMENT

Revenues

Operating revenue is expected to increase by ISK 10,031 million from 2015 to 2020 or by 25.1%. Retail sales of electricity are to increase by ISK 2,405 million or 21.6% and retail sales of hot water by ISK 2,665 million or 25.4%. Revenue from fibre optics is expected to increase by ISK 729 million or 43.2%. Whole sale revenue is to increase by ISK 2,066 million or by 26.5%.

Picture 1 - Revenues

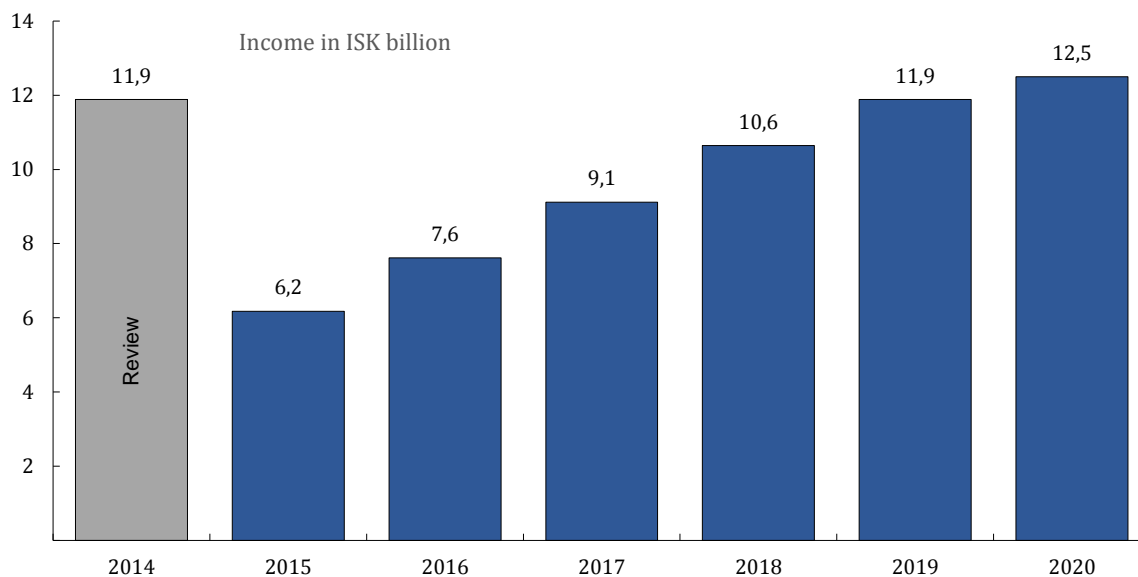

Expenses

Expenses before depreciation are assumed to increase from 2015 to 2020 by ISK 4,672 million or 29.2%. Energy purchases and transmission costs to increase by ISK 1,357 million or by 23.6%. Wages and other operating expenses to increase by ISK 3,314 million or by 32.4%. Increases in operating expenses are mainly the result of general price increases.

EBITDA rises from ISK 23,696 million for the year 2015 to ISK 29,329 million for the year 2020 or by 22.4%.

Income

Picture 2 shows forecasted income over the period 2014 – 2020. Income for the year 2020 is expected to rise to ISK 12.5 billion. Calculated items i.e. changes in value of derivatives embedded in electricity contracts can have a considerable impact on income. Such an impact is expected for the year 2014 as can be seen in picture 2.

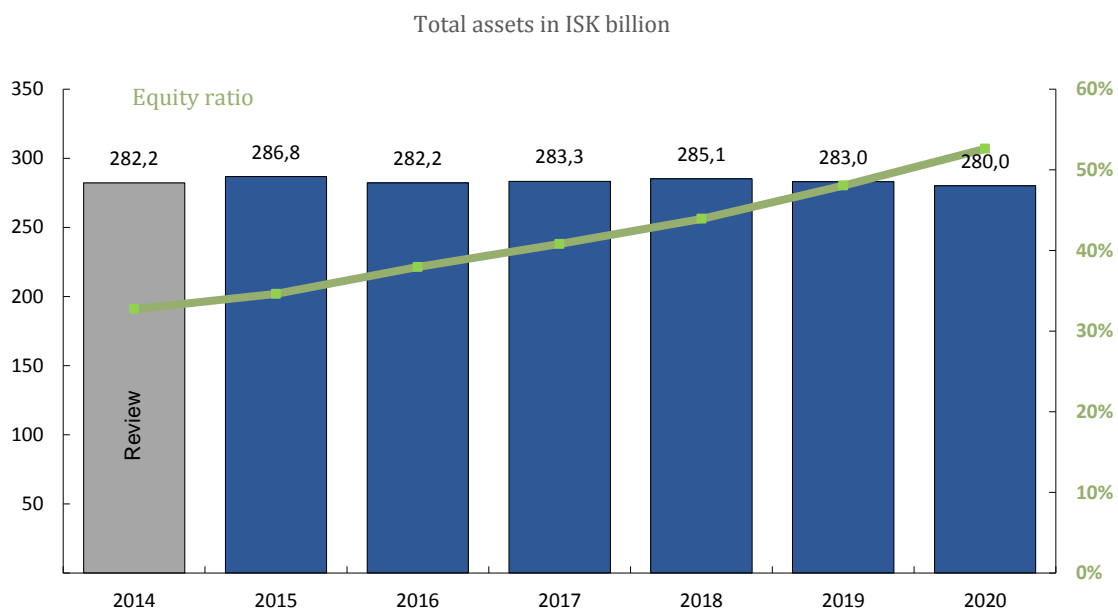

Picture 2 – Income

BALANCE SHEET

The forecast shows total assets to be reduced by ISK 6.778 billion or by 2.4% from 2015 to 2020, or down to ISK 280.0 billion at 2020 year end. The equity ratio improves constantly during this period from being 34.6% in 2015 to become 52.6% at yearend 2020.

RESULTS AFTER REVIEW

Picture 3 - Total assets

Equity at year end 2020 is forecasted to be ISK 147.3 billion after increasing by ISK 48.1 billion from 2015. Assuming that total liabilities for the same period will be reduced from ISK 187.5 billion to ISK 132.7 billion or by 29.2%.

Picture 4 - Total debt

RESULTS AFTER REVIEW

STATEMENT OF CASH FLOW

Investment activities

The forecast for investments for the period 2016 – 2020 is ISK 46.6 billion.

Investment in distribution systems is forecasted to be ISK 29.6 billion. Primary projects are renewal of main supply pipeline for hot water, renewal of transmission and sub stations and joint projects with the municipalities in OR's service area. Sewage projects on the west coast will be resumed in 2015 and finished in 2016. By then the status of the sewage system in these communities should be up to par with those in the capital area.

Investment in power plants is forecasted to be ISK 13.9 billion. Primary projects are concerned with environmental issues i.e. scrubbing of sulphur dioxide and a construction in connection with the second phase of The Geothermal Plant at Hellisheiði.

A realization of ISK 9.5 billion from a derivative financial asset linked to aluminum prices is planned for 2016.

Investments

Appendix

Systems

Hot water distribution system

Renewal of street pipes and distribution systems – General criteria:

- Accident risk is evaluated leading to dangerous pipes being prioritized
- In the risk analysis location, age and possible results of an accident are considered
- Break downs are registered; Pipes with long history of break downs or break downs of a serious nature are prioritized
- Older pipes are more likely to break down. They are scrutinized especially when related to projects of other distribution systems or projects of the municipalities or other entities.

Main pipelines HAB

- Great risk to employees of OR distribution systems in connection with break downs
- Great risk of passers-by hurting themselves in the vicinity of the point of break down
- Long history of break downs and serious incidences
- The one and only supply pipe to large communities

Reykja-Supply-Pipe and other main pipelines

- Certain points in the system are categorized as weak according to a study of the state of the system of the capital area (pr. report 2011)

Additional reserves for HAB

- Peak demand now is close to the capacity of current resource area harnessed
- Long lead time for new plants

Electricity distribution system

Renewal of high voltage cables and systems – General criteria

- Systematic analysis of condition will show weak spots
- Break downs are registered: Cables with frequent or serious break downs are prioritized
- Sensitive users

Transformer station A20 at Akranes

- The electrical equipment in present station is old and out moded
- New general zoning plan for Akranes demands a move
- Operational security is not satisfactory (one unit´s break down should be compensated by another)
- The capacity of present equipment is insufficient given the present load. Peak load was greater than the capacity of one of the high voltage transformers. There is no room for additional customers.

Appendix

Transformer stations, renewal of equipment

- Age of station's electrical equipment and break down history

Central control system for electricity

- Software and hardware are redundant and therefore no spare-parts available

Renewal of substations

- Requirements of Iceland Construction Authority of scheduled renewal

Kjalarnes-line to ground cable

- Break down history due to weather affecting security of power delivery

Water works

Renewal of street pipelines and systems – General criteria

- Break downs are registered. Pipelines with long and serious history of break downs are prioritized
- Older pipes are more likely to break down more often. They are scrutinized especially when related to projects in other distribution systems, by municipalities or by others.
- The importance of water for households and for putting out fires

Renewal of main pipelines in Reykjavík

- Importance of pipelines
- History of break downs
- Position of pipelines under the great thoroughfares of the road system

Vatnsendakriki – Procuring additional water resources

- Securing water resources for Reykjavík – Alternate water springs due to potential contamination
- Increased use

Filtering system Grábrók

- Unusual turbidity

Sewage

- ABK (Equipment and pipes)
- The decision of the owners to renew sewage system in The Westlands as the sewage systems were being acquired
- Construction was supposed to be completed in 2014 but investments have been delayed by owners decision

Appendix

Lining (refurbishing of older sewage systems)

- Systematic photographic observation
- Prioritizing renewal after analysis of condition

Pumping and scrubbing stations –Improvements

- History of break downs
- Prioritization by operational staff's evaluation

Our Nature (ON)

Listed below are the main projects of ON for the year 2015 also followed by further deliberations.

Pipeline from Hverahlíð

With reference to The analysis of risk and profitability as presented to The Board and the owners - during the projects approval procedure - it is decided i.e. that IRR for the project is 20% and the profitability will increase the sooner it is completed.

Steam production well, supplemental stream for NV

Steam production at The NV area is diminishing at a rate of 1% per year. Last drilling for supplemental steam was in 2008 and the production has now diminished by 3MW from the peak production capabilities. Annual loss of revenue is now ISK 146 million and will increase annually by ISK 56 million until supplemental steam has been harvested. ON estimates that the sooner supplemental steam comes on line the greater the increase profitability for the project.

The case of down flow at HH

The utilization and operating license stipulates that all geothermal fluids resulting from the operation shall be pumped back down into the geothermal reservoir and that temporary surface emission is only allowed during major a break down.

Water catchment and heat dispersion at Nesjavellir

NV's operating license stipulates that all surface release of geothermal fluids resulting from the operations shall cease in the year 2011. Due to a demanding financial position this provision has now been suspended until year end 2016. Reduction of heat release at the surface as soon as possible is among the projects stated in the investment plan.

Issues of geothermal gases at Hellisheiði

Continuing projects in the approved project plan aim at fulfilling provisions regulation 514/2010 on reducing strength of sulphur dioxide released from geothermal power plants. Planned projects are deemed necessary to reach set goals before the exemption runs out at the end of the year 2016.

According to the latest review income for the year 2015 is expected to be ISK 6,179 million, compared to ISK 11,884 million for 2014. Thus resulting in a reduction of ISK 5,705 million. Equity ratio is expected to be 34.6% at yearend 2015 compared to 32.7% yearend 2014.
