PROMISING RESULTS IN INVESTIGATIONS AT HOPEAVUORI GOLD-DEPOSIT

Current mineral-resources at Hopeavuori gold-deposit in the Tampere area is estimated to 238.000 tons at a gold grade of 3.8 g/ton. Achieved results show that Hopeavuori's gold-deposit has potential for significant increase of mineral-resource.

About 500 meters west of Hopeavuori's main deposit, there is a smaller deposit Hopeavuori West. Current amount of gold-bearing rock is estimated to about 50.000 tons at 1.3 g/ton gold. This area will be included into next investigation-phase together with the area between the targets.

Both resource estimates belongs to the category inferred, according to JORC Code 2012. A cut-off at 0.5 g/t gold and no top-cut has been used. Resource- models have been prepared on basis of drilling, geophysical investigations and three-dimensional modelling.

Concentration-properties of Hopeavuori's gold-bearing deposits have been investigated at the Mineral Technology Laboratory of Geological Research Center. The sample was a 71 kg sample collected from diamond-drill cores, where average gold-content was 4.62 g/t.

The mineralogical study was done with a hydro-separation method to detect the gold-amenable for gravity-concentration. With a gold-grade of 3718 g/t at a recovery of 5.7 % the heaviest fraction was detected.

In the bench-scale gravity-separation test on a shaking-table a gold-grade of 228 g/t at a recovery of 18.7 % was obtained. Rougher flotation on the gravity-tailing yielded to a bulk-rougher concentrate. The gold-grade of the concentrate was 72.7 g/t and the gold recovery 74.9 %. In direct rougher flotation the bulk concentrate showed a gold grade of 80 g/t at a recovery of 92.9 %.

Concentration tests indicate that it is possible to prepare gold concentrates, while additional investigation-tests will be needed in order to optimize the concentration-process.

"I am very pleased with the results of the investigations of the Hopeavuori gold-occurrence. They indicate that along with further investigations the deposit has potential to become a significant exploitable deposit. These investigations is the first step in developing our gold-targets in the Tampere area and creates trust into the potential of our targets in this area"
says Timo Lindborg.

Stockholm, 22nd December 2014

Sotkamo Silver AB (publ)

Timo Lindborg, CEO

The independent consultant Dr. Jyrki Parkkinen, Doctor in Geology, EURGEO holds Qualified Person status under "The European Federation of Geologists" (EFG) has conducted the mineral resource estimation. Dr. Parkkinen is completely independent from the Company and he does not hold any shares in Sotkamo Silver.

About Sotkamo Silver AB:

Sotkamo Silver AB's business concept is to exploit mineral deposits in the Nordic countries with regards to human society and environment. Sotkamo Silver owns, through its subsidiary mineral deposits, which contains silver and gold in Finland. The Company's main development project is the Taivaljärvi Silver Mine.

Sotkamo Silver applies SveMin's & FinnMin's respective rules of reporting for public mining & exploration companies. Sotkamo Silver has chosen to report mineral resources and ore reserves according to the internationally accepted JORC or NI 43-101-code. The company applies International Financial Reporting Standards (IFRS) as approved by the European Union.

The ticker symbol is SOSI in NGM and SOSI1 in NASDAQ OMX Helsinki. ISIN-code for Sotkamo Silver shares is SE0001057910..

Company's press releases and financial reports are distributed via NGM and are available on www.silver.fi
