

## The global water supply is limited

## Water allocation

Some experts estimate that more than 50% of landscape water use goes to waste due to evaporation or runoff caused by over-watering.<sup>5</sup>

Currently, more than a billion people, about 17% of the world's population, don't have access to clean water<sup>6</sup>

That's about 1 in 6 people in the world

## Demand for water keeps growing

By 2030, nearly half of the world's population—the majority living in underdeveloped countries—will be living in areas of high water stress.<sup>8</sup>

Increased water use in agriculture and industry is driving demand for improved infrastructure.<sup>9</sup>
