

DSMB RECOMMENDS CONTINUATION OF EFFIKIR TRIAL WITH TWO ARMS

Marseille, France, March 26, 2015

Innate Pharma SA (the "Company" - Euronext Paris: FR0010331421 – IPH), the innate immunity company developing first-in-class therapeutic antibodies for cancer and inflammatory diseases, today announces that the Data and Safety Monitoring Board ("DSMB") completed its fourth assessment of the EffiKIR study and recommended to stop treatment in one arm and continue the trial with the remaining two arms as per protocol.

In issuing this recommendation, the DSMB considers that treatment in the stopped arm cannot be superior to placebo. There is no concern with safety. Patients in the stopped arm will be followed up as planned. The trial remains blinded. The Company now expects that analysis on the primary efficacy endpoint, leukemia-free survival, will occur in Q2 2016.

As specified in the study protocol, the DMSB meets every six months to examine the safety data accumulated during progress of the trial.

About EffiKIR (study IPH2102-201):

EffiKIR is a double-blind placebo-controlled randomized Phase II trial of lirilumab as maintenance treatment in elderly patients with Acute Myeloid Leukemia ("AML") in first complete remission. The protocol initially called for inclusion of 150 patients, randomized into three arms. Two arms test single agent lirilumab at different doses and treatment intervals and in the third arm, patients receive placebo. The primary efficacy endpoint is leukemia-free survival. Secondary endpoints include safety and overall survival. In March 2015, the treatment was discontinued in one treatment arm in accordance with the DMSB's recommendation. The trial continues with the two remaining arms, as per protocol.

The rationale of this trial is based on the capacity of activated Natural Killer (NK) cells to directly kill tumor cells and trigger broad immune activation. This rationale is supported by clinical studies showing that activated NK cells can significantly lower the recurrence of various hematological malignancies, including AML, following hematopoietic stem cell transplantation*.

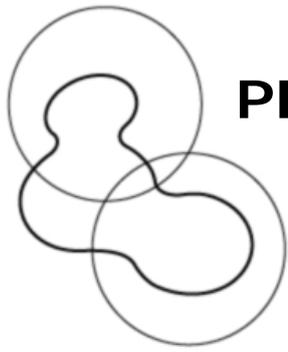

This trial is sponsored by Innate Pharma and is performed in France, with the participation of the two French clinical cooperative groups, ALFA and GOELAMS[†], harnessing the research effort of the French centers qualified to treat patients with AML.

About lirilumab (IPH2102/BMS-986015):

Lirilumab is a fully human monoclonal antibody (mAb) that blocks the interaction between Killer-cell immunoglobulin-like receptors (KIR) on NK cells and their ligands. Blocking these receptors facilitates activation of NK cells and destruction of tumor cells.

PRESS RELEASE

innate pharma

Lirilumab is licensed to Bristol-Myers Squibb Company. As part of the agreement between Innate Pharma and Bristol-Myers Squibb, Bristol-Myers Squibb holds exclusive worldwide rights to develop, manufacture and commercialize lirilumab and related compounds blocking KIR receptors, for all indications. Under the agreement, Innate Pharma conducts the development of lirilumab through Phase II in AML.

In addition to the EffiKIR trial, where lirilumab is currently being tested in a randomized, double-blind, placebo-controlled Phase II trial in elderly patients as a single-agent in AML, lirilumab is also being evaluated by Bristol-Myers Squibb in clinical trials in combination with other immunology agents in a variety of tumor types.

About Innate Pharma:

Innate Pharma S.A. is a biopharmaceutical company discovering and developing first-in-class therapeutic antibodies for the treatment of cancer and inflammatory diseases.

Its innovative approach has translated into major alliances with leaders in the biopharmaceutical industry such as Bristol-Myers Squibb and Novo Nordisk A/S.

The Company has two clinical-stage programs in immuno-oncology, a new therapeutic field that is changing cancer treatment by enhancing the capability of the body's own immune cells to recognize and kill cancer cells. Innate Pharma's science also has potential in chronic inflammatory diseases.

Listed on Euronext-Paris, Innate Pharma is based in Marseille, France, and had 99 employees as at December 31, 2014.
