

Advenica receives order valued at 56.5 MSEK from Swedish authority

Advenica, a leading Swedish cybersecurity company, has received a large-scale order from a Swedish authority for VPN equipment for IP networking. The order value is 56.5 MSEK and will be delivered over the coming year.

For several years, Advenica has provided similar equipment to the authority and this new VPN solution is complementary to these existing installations. The equipment is approved to the highest security rating in both Sweden (Top Secret level) and the EU (SECRET UE / EU level).

"For a long time, we have shared a well-established, strategic cooperation with the authority in the development of high-tech cybersecurity solutions to protect Swedish secret information. We are pleased to be a trusted provider in the protection of our national security."

Andreas Linde, CEO, Advenica AB
