## 4DK Technologies Selects Enea Accelerator Platform

### ***Comprehensive Solution Enables Early Stage Company to Focus on Innovation and Achieving its Business Goals***

**STOCKHOLM, Sweden, and SAN JOSE, Calif., Dec. 14, 2007** – Enea (Nordic Exchange/Small Cap/ENEA), a world leading provider of network software and services, today announced that 4DK Technologies has selected the Enea Accelerator Platform™ to help accelerate the time to market for its SuperConnectivity™ platform. The Enea Accelerator Platform provides a comprehensive “application ready” platform solution for companies looking to jump start product development. 4DK Technologies has signed a 5-year license agreement beginning in 2007, which also includes Enea Professional Services, for an integrated solution offering to help leverage the full benefits of the Enea Accelerator platform.

“4DK will redefine the user experience for wireless users by exploiting the full potential of the next-generation, all-IP technologies,” said Tamara Casey, CEO at 4DK. “SuperConnectivity is our unique service creation environment with the highest level of service integration and interoperability. Enea’s software gives us carrier grade reliability, streamlines the integration with the ATCA system and provides us with a platform on which we can innovate. We expect the Enea platform to shorten our critical development time by at least six months.”

At the heart of the Enea Accelerator Platform is Enea Element™ – a suite of high-availability, standards-based middleware services that provide a foundation for building robust, high-performance applications and integrate the hardware and system software components into a cohesive communications platform. The Accelerator Platform also includes Enea Polyhedra™ a high-performance embedded relational database management system, Tail-f Systems’ ConfD network management solution and a carrier grade Linux distribution. Bundled with a services team drawn from Enea’s 350 professional consulting engineers, Enea Accelerator is a complete system platform on which companies, from start ups to Tier 1’s, will build the services that will change how the world communicates.

“In order to make an impact today, early stage companies must deliver highly differentiated and reliable systems while under very demanding time-to-revenue constraints,” said Johan Wall, CEO at Enea. “We are very pleased that 4DK Technologies selected the Enea Accelerator to avoid having to ‘reinvent the platform software wheel’ and meet its market window.”

## **About Enea**

Enea (Nordic Exchange/Small Cap/ENE) is the leading supplier of real-time operating systems, middleware, development tools, database technology and professional services for high-availability systems such as telecommunications infrastructure, mobile devices, medical instrumentation, and automobile control/infotainment. Enea's flagship operating system, OSE™, is deployed in approximately half of the world's 3G mobile phones and base stations. Enea has over 500 employees and is listed on the OMX Nordic Exchange Stockholm. For further information on Enea, please visit [www.enea.com](http://www.enea.com).

Enea, OSE, Enea Element, Enea Polyhedra and Enea Accelerator Platform are registered trademarks of Enea AB or its subsidiaries. All other company or product names are the registered trademarks or trademarks of their respective owners. © 2007 Enea.

## **About 4DK**

4DK Technologies, Inc. is an industry-leading innovator developing interoperability solutions for seamless connectivity across wireless networks, devices and applications. In looking to exceed existing commercial capabilities, 4DK has designed SuperConnectivity™, a patent pending product suite for service disaggregation and recombination that exponentially increases the functionality and adaptability of applications to purposely meet the ever-changing needs of mobile users.
