

## **Nederman expands its product range - introduces the most flexible dust collector ever**

**To ensure a perfect fit to any manufacturing application generating dust, smoke or fumes, Nederman introduces the L-series, a modular and fully configurable dust collector.**

In manufacturing facilities where dust and smoke is generated during the production process, it's a primary objective to create a safe working environment with high production efficiency and low emissions to meet stringent regulations. Since no facility is the same, Nederman has designed its new dust collectors, the Nederman L-series, to be fully flexible and configurable to match a wide range of needs in collecting/recycling of dust, particulates, smoke and fumes.

### **How we create the perfect fit**

The Nederman L-series dust collector is based on different types of cartridge and bag filters depending on the type of dust or particulates that is generated. Multiple types of filter medias are available that are matched to the type of contaminant to further maximize performance and filter life. After selecting the right filter media, the dust collector is configured with different sized panels to match filter type and airflow.

### **Flexible, efficient and future-proof**

Nederman's wide expertise in extraction as well as collection of dust, smoke and fumes helps ensure not only a perfect fit, but also efficiency and a future-proof solution. The new L-series can be expanded to fulfil future process changes or new regulations. New filter modules can easily be added whenever increased filter capacity is required.

### **Low total cost of ownership**

The L-series offers low total cost of ownership due to low power consumption, minimum maintenance needs and extended filter lifetime. It can be either pre-assembled or built on-site, which may generate considerable savings on shipment cost. The Nederman L-series is available in ATEX compliant configurations for safe handling of combustible dusts, as well as with a variety of ancillary components and equipment for configuring the dust collector and system to match all of your facilities operation and maintenance needs.

#### **About Nederman**

Nederman is one of the world's leading companies supplying products and solutions in the environmental technology sector focusing on industrial air filtration. The company's products and solutions contribute to reducing the environmental impact, create safe and clean working environments and improve production efficiency. Nederman offers complete solutions, including engineering and design, commissioning, installation, training and aftermarket. Sales are managed through the Group's own sales offices and distributors in over 50 countries. Production is performed in 12 countries on five continents. The Group is listed on Nasdaq OMX, Stockholm and has 1,900 employees.

Nederman Holding AB (publ), P.O. Box 602, SE-251 06 Helsingborg, Sweden.  
Corporate registration number: 556576-4205.
