## **Opus and ISC-Group launch Internet Portal for business vehicles at the SYSTEMS fair in Munich**

- **Extensive tax savings with technology from Opus**
- **Opus and the ISC-Group present the latest version of the TripLogPRO and launch the Internet Portal [www.triplog.de](http://www.triplog.de)**

According to tax experts that ISC has consulted, German drivers of business cars (employed as well as self-employed) give away more than 1 billion Euros annually to the German state because they don't report by use of a drivers' log. Instead most drivers choose the 1% rule, which at first sight, looks easy and beneficial since no driving reports are needed. A large number of these drivers could save a lot of tax payments by reporting the actual mileage instead.

All self-employed (Freiberufler and Selbständigen) must, according to the new 2007 rules, use a driver log for their business car. Many business owners believe this is a complicated and time-consuming task to fill out a manual drivers log book. With the new TripLogPRO II it's much easier and quick as the log book writes itself automatically, accurately and according to the authorities' stipulations. A great solution that many companies were waiting for!

At the computer and technology exhibition "SYSTEMS" in Munich last week, Opus and ISC presented the latest of the TripLog products, the TripLogPRO II, which is the only drivers log system combining GPS data with driving data directly from the vehicle electronics. This makes the reported driving distance exact even if the GPS signal is lost as the GPS is only used for recording the stop positions of the vehicle.

At the exhibition the companies launched their new commonly developed information portal for business vehicles [www.triplog.de](http://www.triplog.de), which has been developed and is run by ISC Opcorner, a subsidiary in the ISC Group. The portal offers information about the German company car regulations and the tax benefits calculator estimates how much saving a company can obtain by using these products. In addition, our web shop allows you to order TripLogPRO products and get them delivered to your door.

"The SYSTEMS show was the right timing for us to launch the latest version of our electronic drivers log system TripLog® and with the new product, which will be delivered from November, we have a very competitive solution for self employed as well as for company fleets." "We are also very satisfied with the co-operation with the ISC-Group who is a competent partner in both system developments as in marketing on the important German market," says Magnus Greko, Managing Director of Opus Prodox AB in Mölndal, Sweden.

Peter Heinold, CEO of ISC Business Technology AG; "Our co-operation with Opus has successfully developed over the last months and Opus TripLog<sup>®</sup> technology opens up new opportunities within several segments which give our customers clear advantages. This is confirmed by the number of customer contacts on the exhibition. With [www.triplog.de](http://www.triplog.de) we take a step forward to reach specific target groups for our products."
