Integralis and FastPassCorp joins forces to expand self-service of passwords in Africa

Integralis and FastPassCorp have entered into a strategic partnership to help companies and organizations in South Africa to improve end-user service, IT-productivity and IT-security related to password processes.

March 31st 2016, Copenhagen — FastPassCorp A/S, the technology leader in enterprise password self-service solutions and Integralis IT Consultancy (Pty) Ltd Cape Town RSA, today announced a strategic partnership, where Integralis will sell and deploy the complete product range and services of FastPassCorp in Africa, starting with customers in RSA.

As large organizations must have complex password policies users tend to forget passwords more and more. This leads to productivity loss and security risks for practically all organizations. FastPass solves the forgotten password situation from the user side and the help desk side. Customers can get the technology in their own preferred way as an in-house solution or as a Cloud solution from Integralis.

Integralis is the leading South African consulting and service company within the Identity and Access Management field having projects and support with multiple large South African customers.

Integralis partner Morne Smith states: "We see a huge need for modern automated tools for the password process in South Africa. We already have very positive experience locally with FastPass. We are excited to bring password self-service to organizations in Africa, and are convinced that the timing is now!"

CEO Finn Jensen of FastPassCorp: "We are proud that Integralis strategically will expand their password self-service with FastPass. We see a deep commitment from the many trained consultants at Integralis, and we are convinced that Integralis will be successful".

Integralis will sell FastPass throughout Africa!
