

CybAero delivers three helicopter systems to China

The three systems of unmanned helicopters meant for the Chinese Customs, and ordered by Jolly have been delivered from Linköping today.

It has been further agreed that CybAero will send a flight team to China to train the end-customer's staff and to be on-site for the implementation of the final part of the FAT (Factory Acceptance Test), which needs to take place in China instead of Sweden due to the Swedish rules and regulations. With the change in venue payment is now expected in September/October as opposed to August.

The systems, which are designed to operate from ships, are very advanced and have undergone numerous tests before delivery. The helicopters are for instance equipped with a deck-landing system that CybAero has developed together with Airbus that allows automatic takeoff and landing from a vessel. This was successfully tested under realistic conditions outside Karlskrona, Sweden in late April.

CybAero is first in the world to launch these type of system.

About CybAero

CybAero develops and manufactures Remotely Piloted Aircraft Systems (RPAS) for safer and more effective aerial operations in various environments, including those hazardous in nature. The company has made a great international impact with its APID One helicopter, which can be adapted for both military and civilian applications such as coastal and border surveillance, search and rescue missions, and mapping. CybAero's head office is located in the Mjärdevi Science Park in Linköping, Sweden. The company has around 50 employees and has been listed on the Nasdaq First North since 2007. FNCA Sweden AB is the company's certified adviser.
