

Stockholm September 5, 2016, Preliminary data from a retrospective study indicates that OSSDSIGN Cranial may provide a better, more permanent solution for cranioplasty, even in a complex patient population.

In a retrospective study of patients undergoing cranioplasty using OSSDSIGN Cranial, 96,7% of patients treated showed no signs of post-operative complications leading to implant removal at an average follow-up time of 9,5 months. This indicates that OSSDSIGN Cranial may provide a better, more permanent solution for cranioplasty, even in a complex patient population.

This preliminary data is part of a larger retrospective study which will be published and presented once completed. The preliminary data will be available in the OssDsign booth (#1) at EANS 2016 (the 16th European Congress of Neurosurgery, in Athens, Greece, 4th - 8th September 2016).

About OSSDSIGN AB

OssDsign is a Swedish medtech company dedicated to creating regenerative implants for improved healing of bone defects and deficits in skull, facial and other types of surgery. OssDsign has successfully launched its first patient specific products OSSDSIGN® Cranial and OSSDSIGN® Facial in Germany, the UK and the Nordic countries, and further global market expansion is ongoing.

By combining clinical insight with proprietary material technology and patient adapted design, OssDsign supplies an expanding range of tailored solutions for cranial repair and facial bone reconstruction. OssDsign's technology is the result of collaboration between clinical researchers at the Karolinska University Hospital, Stockholm, and
