No. 43/2016

NCC to conduct earth and groundworks in Norvik for SEK 500 million

NCC has begun initial preparations for the construction of Stockholm Norvik Port. The work will mainly involve rock work for port areas and a rail connection on behalf of the Ports of Stockholm. The total order value is estimated at SEK 500 million.

The infrastructure work and rock work for the rail connection and port areas will continue for two and a half years.

Approximately ten million tons of rock will be blasted and used as filling at the site of the new port as well as at sea in order to create new land masses for port areas and docks,” says Carina Angarth, Norvik Project Manager, NCC Infrastructure.

In addition to the ongoing earth and groundworks assignment from the Ports of Stockholm, NCC will also build a logistics and business park on its own land, where companies will be able to establish operations in a dynamic environment in close proximity to the port, road network and a major city.

The transaction will be registered in the third quarter of 2016 as follows: 55 percent in the NCC Industry business area and 45 percent in NCC Infrastructure.
