Within a year the cost of goods sold grew 50.4% and the marketing and general administration costs 27.0% forming respectively 87.8% and 3.8% of the sales. Due to the faster than expected increase of the prices on labour force and materials, the gross profit margin of the Group decreased from 15.0% to 12.2% and the operating profit margin from 10.6% to 8.5% as compared to the six months of the year 2006.

The net profit of the Group for 6M 2007 was 242.0 million kroons, with a yearly growth of 43.2%. Due to the decrease of the gross and operating profit margin, the net profit margin decreased during the reference period from 9.9% to 9.7%. A positive influence to the profitability of the period was expressed by the successful sales of housing and financial income from associated companies.

The net cash flow of the Group of the first half of the year was –481.6 million kroons, including cash flow from operating activities –410.2 million kroons, from investing activities –33.8 million kroons and financing activities –37.6 million kroons. The cash flow from operating activities were mostly influenced by the change in inventories arising from the development activities (-289.5 million kroons) and change in trade receivables related to operating activities (-219.0 million kroons). The negative cash flow of the period was covered with additional loans (net cash flow of the period from loans +117.1 million kroons) and liquid funds of the Group.

Construction market

The second quarter of the year 2007 did not bring along any significant changes in the construction market, good demand prevailed and the fast increase of the construction volumes and prices continued in the sector. The sector continues to have a complicated situation with the labour force, the tender is limited and the increase of the labour costs is continuing. As compared to the 2nd quarter in 2006, construction costs increased by 29.1% in Latvia, 15.2% in Estonia and 13.9% in Lithuania including the respective 47.9% and 26.5% increase in labour costs in Latvia and Estonia.

Stabilization of prices took place in housing market and offer of new apartments increased significantly in the second quarter of the year. As a result of the changes that have taken place in the environment and seasonality of the real estate market, the sales periods of the apartments extended. The increased offer improves significantly the choices of the buyers and sets higher requirements for the developers in terms of the quality of the infrastructure and general quality of the projects, and brings along the differentiation of prices. The developers who have liquid funds have better outlook to managing extended sales periods and poorer financing possibilities.

The outlook of the nearest future of the sector is good. The greatest risk for the further development of the sector is the increase of the prices of the construction services that have lasted for a long time and deterioration of the general interest environment and financing conditions of the real estate sector.
