

IT – Genium INET – Nordic Electricity Futures and new Nordic Electricity Option Contracts available in Genium INET 4.1.0215 Test System (62/16)

As announced in Exchange and Clearing information [65/16](#) Nasdaq Commodities moves Market Making to Futures Contracts in Nordic Electricity. Effective November 21 2016 market makers will move all quotations for Nordic Electricity DS Futures and EPAD DS Futures to Futures Contracts. The Nordic yearly, quarterly and monthly Futures Contracts were launched in September 2015, so no new futures contracts are launched.

As announced in IT-Notice [53/16](#), subject to testing and regulatory approval, Nasdaq Commodities will launch new Nordic Electricity yearly and quarterly Option Contracts with Futures as underlying, effective November 21. This is to complement the offering of Futures contracts in the Nordic Electricity market.

To facilitate testing in preparation for the new Nordic Electricity Option Contracts both options and the existing Nordic Electricity Futures contracts are available in External test 3 and 4.
