

IT – Genium INET 4.1.0220 Project update for Commodites (01/17)

This message contains important information regarding the Genium INET upgrade on February 18th to version 4.1.0220 which includes new functionalities and enhancements going live February 20th 2017.

Italian Power Futures postponed

As earlier communicated in [IT-Notice 67/16](#), Nasdaq Commodities plan to launch Italian Power Futures in Genium INET in 2017. The production date for Italian Power futures has been postponed and will not be launched on February 18th as part of the Genium INET version 4.1.0220 upgrade. The production live date for Italian Power will be communicated in due course.

Italian Power futures contracts will still be available to test in Genium INET External Test system 1 for future market readiness.

Accumulated Market Value Report (Mandatory if used)

To have a more logic structure in the Accumulated Market Value report, the new columns "Todays Settlements" and "MtD Settlements" will be added in the middle of the report. This means that some existing columns will be moved to the right. Examples of the report can be found on the Genium INET 4.1.0220 website.
