

**PRESS RELEASE**

## Tilgin chosen by leading European service provider as a key partner in move to 'all IP' network

**STOCKHOLM SWEDEN, June 27, 2007 –Tilgin, a leader in customer premises equipment (CPE) for triple play and IMS solutions, today announces an order from a leading European service provider to supply Tilgin's centralized remote management solution (VCM) for CPE.**

This deal is the result of the earlier announced agreement with a world leading system integrator for IP residential gateways to a leading European service provider. Tilgin's centralized remote management solution (VCM), will form part of the system integrator's end-to-end solution, making it possible for the service provider to execute its 'all IP' network strategy, designed to lower cost and creating more efficiency in its networks. Following a thorough and competitive evaluation, Tilgin's VCM and professional services were chosen to enable centralized remote management of broadband telephony over Ethernet/IP connections. The project is set to begin in summer 2007 with lab tests, field trials and further deployment.

Ola Berglund, incoming CEO at Tilgin comments:

"This project, working with one of Europe's leaders in 'all IP' deployments is testament to the quality of our centralized remote management solution and our professional services for triple play and IMS-based services. As the telecom industry continues to move towards 'all IP' networks, our expertise puts us in an ideal position to support operators with broadband services."

Tilgin's VCM is a comprehensive centralized remote management solution that plugs into the operator's BSS/OSS model at the services and network levels. Built on a powerful, mass-market solution, VCM provides powerful bulk handling to streamline configuration, service management, troubleshooting, firmware upgrades, helpdesk and reporting.

**About Tilgin**

Tilgin designs and delivers premier IP customer premises equipment (CPE) for advanced Triple Play and IMS-based services. Supporting the full convergence of voice, video and data, Tilgin takes a network systems approach to CPE that enables service providers to offer a broad range portfolio of dynamic and differentiated next-generation broadband services. Tilgin's comprehensive product portfolio of IP residential gateways, set-top boxes and related management applications, offers service providers unprecedented return on investment - delivering new service revenues and impressive cost savings over the lifetime of the product. Tilgin was founded in 1997 under the name i3 micro technology and listed on the Stockholm Stock Exchange on the Nordic List as of December 2006. It is headquartered in Kista, Sweden, with southern European sales representation in France and Germany as well as a U.S. subsidiary in Seattle. [www.tilgin.com](http://www.tilgin.com)
