Risk management framework

The Board of Directors has overall responsibility for the establishment and oversight of the Company's risk management framework.

The risk profile of the Company is such that market, credit, liquidity and other risks of the investment securities and derivatives held for risk management are borne fully by the holders of debt securities issued.

The Company has exposure to the following risks from its use of financial instruments:

- (a) Market risk;

The Programme offers investors the opportunity to invest in a portfolio of investments, the "investment securities", and alter the interest rate risk and credit risk profile of the portfolio through the use of derivative instruments.

The debt securities are recorded at the value of the net proceeds received in DKK and are carried at fair value through profit or loss. The ultimate amount repaid to the Note holders will depend on the proceeds from the collateral and any payments the Swap counterparty is obliged to make under the terms of the swap agreement. The Company is obliged to provide for the payment or physical delivery of the deliverable obligations to the Swap counterparty and to the Note holders.

All substantial risks and rewards associated with the investment securities are ultimately borne by the Noteholders.

(a) Market risk

Market risk is the risk that changes in market prices, such as foreign exchange rates, interest rates and equity prices will affect the Company's income or value of its holdings of financial instruments.

Market risk embodies the potential for both loss and gains and includes interest rate risk, currency risk and price risk.

The objective of market risk management is to manage and control market risks exposures with acceptable parameters while optimizing the returns on risk.

(i) Interest rate risk

Notes to the financial statements (continued)
For the half financial year ended 31 January 2017

21. Financial risk management(continued)**(a) Market risk (continued)***(ii) Currency risk*

Only the cash and cash equivalents are partially denominated in EUR with all other assets and liabilities denominated in DKK. Therefore, the Company has limited exposure to fluctuation in exchange rates between Euro and its functional currency, i.e. DKK. The risk has been mitigated by the Company receiving arranger income for all foreign exchange transactions.

(iii) Price risk

Price risk is the risk that the fair value of future cash flows of a financial instrument will fluctuate because of changes in market prices (other than those arising from interest rate risk or currency risk) whether those changes are caused by factors specific to the individual financial instrument or its issuer, or factors affecting all similar financial instruments traded in the market.

Other price risk may include risks such as equity price risk, commodity price risk, prepayment risk (i.e. the risk that one party to a financial asset will incur a financial loss because the other party repays earlier or later than expected), and residual value risk.

The Company is not exposed to any significant price risk at the financial period end as it has derecognised all debt securities in issue and all investments held.

(b) Credit risk

The Company is not exposed to any significant credit risk as at the financial period end as it has derecognised all debt securities in issue and investment securities held.

(c) Fair values

The carrying amounts of all the Company's financial assets and financial liabilities at the reporting date approximated their fair values due to their short term nature.

At the reporting date, the Company did not have any investment securities, derivative financial instruments or debt securities (31 July 2016: None).

(d) Liquidity risk

Liquidity risk is the risk that the Company will encounter difficulties in meeting obligations arising from its financial liabilities that are settled by delivering cash or another financial asset or that such obligations will have to be settled in a manner disadvantageous to the Company. The Company's approach is to ensure, as far as possible that it will always have sufficient liquidity to meet its liabilities when due, under both normal and stressed conditions, without incurring acceptable losses or risking damage to the Company's reputation. The Company is not exposed to any significant liquidity risk at the financial period end as it has derecognised all debt securities in issue and investments securities held. Deutsche Bank AG London, as arranger bears all the current and future expenses of the Company.

The Company's obligation to the Noteholders of a particular series is limited to the net proceeds upon realisation of the collateral of that series. Should the net proceeds be insufficient to make all payments due in respect of a particular series of Notes, the other assets of the Company will not be available for payment and the deficit is instead borne by the Noteholders and/or the swap counterparty according to the established priorities.

22. Capital risk management

The Company view the share capital as its capital. Share capital of € 40,000 was issued in line with Irish Company Law and is not used for financing the investment activities of the Company. The Company is not subject to any other externally imposed capital requirements.
