The Risk Stabilised Symbiosis Enhanced Strategy 2 (the “Autopilot Navigator”)

The below chart shows the performance of the Autopilot Navigator. The Autopilot Navigator was first calculated on or around 1 October 2008 (the **Establishment Date**) and all closing levels prior to the Establishment Date are simulated and must be considered hypothetical and illustrative only. Simulated data prior to the Establishment Date may be constructed using certain procedures that vary from the procedures used to calculate the Autopilot Navigator following its establishment, and on the basis of certain assumptions that may not apply in the future. Although these assumptions are considered reasonable or necessary, the variations used in producing simulated historical data from those used to calculate the Autopilot Navigator going forward could produce variations in returns of indeterminate direction and amount.

Past performance is not indicative of future performance

The indicative Redemption Amounts depend on the level of the Performance of the Autopilot Navigator. If the Performance is greater than 0%, the Autopilot Navigator has appreciated in value and if the Performance is less than 0%, the Autopilot Navigator has depreciated in value. These figures below are examples of potential returns and are for illustrative purposes only.
