

## Cegedim Strategic Data (CSD) forecasts the growth in diabetes cases in France through 2022

7.8% of the French population will be diabetic in 2022

Paris, March 19, 2012 – [Cegedim Strategic Data](#) (CSD), leading provider of healthcare market research, has published the results of its study on the evolution of type 2 Diabetes in France up to 2022.

The study uses CSD's longitudinal patient database (LPD) which collects anonymised clinical data on a daily basis from a constant panel of 1,200 physicians covering 1.3 million patients in France.

With this longitudinal patient data, the official figures from the national health surveillance institute (InVS) and demographic data from the national institute of statistics and economic studies (INSEE), CSD forecasted the future trends in diabetes for the period 2012-2022 in France.

### Result highlights

France currently has 2.9 million type 2 diabetes patients. According to CSD, this figure will reach more than 5 million in 2022, reflecting a change in the prevalence rate from 4.6% in 2011 to 7.8% in 2022.

The study shows that the increase in prevalence is influenced by the aging of the population but is also heavily influenced by factors such as obesity and a sedentary lifestyle.

CSD also analysed the form of treatment (OAD<sup>1</sup> only, Insulin only, OAD+insulin), and associated therapeutic strategies (mono/bi/tri therapy and higher) as well as their evolution.

This study will also be available for Germany, Spain, Italy and the UK.

*These forecasts are derived from historical trends. The calculations do not include new factors that could arise in the future.*
