Genovis launches FabULOUS® Fab kit

Genovis is launching a further development of FabULOUS® that will be marketed under the name FabULOUS® Fab kit. The product will be presented at the annual conference of the American Society for Mass Spectrometry (ASMS) in San Antonio next week.

Genovis' products are marketed under the name SmartEnzymes and with FabULOUS® Fab kit Genovis can now offer customers who work with antibodies from mice a product that quickly and easily cleaves and purifies intact Fab fragments. Antibodies from mice are frequently used in preclinical research for various types of analysis.

“The FabULOUS® kit is yet another example of Genovis' ambition to provide products that facilitate work and reduce time for users. Our offer is now further strengthened with a product that specifically targets those who work with antibodies from mice. Not only does the product improve the quality and yield of the fragments that the customer generates, but we have also simplified handling and significantly reduced the time compared with currently available technologies,” says Fredrik Olsson, CEO of Genovis.
